"Make Friends"

WITH OUR OAK-TANNED LEATHER BELTING

**Guaranteed
Flawless**

The most particular process of Tanning our Belts makes them proof against stretching and preserves the full strength of the hide.

**McLAREN'S
BELTS
DO ALL
THAT IS
EXPECTED
OF
BELTS**

The sign of the oak leaf and acorn on your machinery belting means freedom from all troubles. Don't take our word for it—prove it yourself.

Equip your plant with McLaren made belting and you'll soon say along with many of the largest factories in Canada that it's the best belting by a long way that you've ever had. A trial convinces you how good our belting is. If you visited our Montreal factory you would marvel at the amount of work, care, and thought expended on every piece of belting before it receives the little—but all important—stamp

"GENUINE OAK."

We don't want your business without your friendship—we work hard to deserve both.

We believe in the quality of our belting. We want your confidence and also your business. We will be glad to put you in touch with a few of the firms now using our belting. Write or call.

The Corbet Foundry and Machine Co., Limited,
Owen Sound, Ont.

Dear Sirs,—

We are pleased to be able to report to you that your No. 2 Automatic Steam Towing Machine, which has 1200 ft. of 1-inch dia. Steel Hawser, which you installed on our tug D.S. Pratt, is giving us first-class satisfaction. We have been using this machine two years and there is no doubt but that it is far ahead of the old manilla rope, both in cost and trouble of handling. We take pleasure in recommending same.

Yours truly,

JOHNSON'S Veterinary Remedies

are the surest, the most economical and the best medicines with which to equip your stables. They have been on the market for twenty-five years and still retain their superiority over all others.

The quality never varies, it is our first consideration.

Prices taking effect July 1st are as follows:

Johnson's Horse Liniment No. 1	Per Gal.	\$7.00
Johnson's Horse Liniment No. 1	Quarts, Per Doz.	19.00
Johnson's Horse Liniment No. 1	Pints, Per Doz.	10.00
Johnson's Horse Colic Remedy	Per Gal.	10.00
Johnson's Horse Colic Remedy	Quarts (8 Doses each) Doz.	23.00
Johnson's Horse Colic Remedy	Pints (4 Doses each) Doz.	12.00
Johnson's Veterinary Healing Ointment (Gall Cure)		
2 lb Tins	each 2.25 Doz.	24.00
1/4 lb. Tins	Per Doz.	4.00
Johnson's Concentrated Condition Powders, 1 lb. Pkgs.	Doz.	4.80
Johnson's Horse Worm Powders,	Pkgs., Per Doz.	2.50
Johnson's Purging Balls	Per Doz.	2.50
Johnson's Antisepting Dusting Powder		
(For Drying and Healing Sores, Proud Flesh, etc.)	Per Doz.	8.00

Our Family and Van Remedies are as follows:—

Pine and Tar Cough Syrup	Big 4 Liniment—Mosquito Oil
Purgative Pills	X Ray Liniment
Little Liver Pills	Cholerine Mixture (Diarrhoea)
Porous Plasters	Headache Powders
Stomach Bitters	Sarsaparilla
Laxative Cold Tablets	All Healing White Ointment

All Drugs and Patent Medicines at Market Prices.

Making Files for Fifty Years

If fifty years of specializing and progressive experience in the manufacture of one thing tends to quality and efficiency, then the "Famous Five Files" are of the best quality and the most efficient.

Innumerable investigations were made before a formula was finally adopted for the steel. Each file is now made from steel best suited to the class of work for which it is intended.

The shape of the teeth has been subject to careful experiments. You can always get a "Famous Five File" with teeth that will cut fastest, and leave the best surface on any kind of metal.

Our hardening process insures long life to each file. Finally, every file is inspected several times during process of manufacture, and, if it shows the slightest defect, at any stage, it is rejected.

Every "Famous Five File" is mechanically perfect. Their qualities are standardized in the trade. Specify them when ordering. They are:

"HAMILTON" CIRCULAR RE-SAWS

Here is a strong, rigid well designed machine, specially gotten up for resawing slabs. The feed rolls are carried on a sliding frame that is easily adjustable to cut lumber any desired thickness. The binding or press roll is 13 in. diam., fitted with saw discs and power driven. The saw used is 42 in. diam., driving pulley 18 in. diam. x 12 in. face. Cut shows Left Hand Machine.

We also make this machine with wooden frame, having the mandrel and saw carried on an adjustable sliding frame.

Descriptive circular sent upon request.

"HAMILTON" HUSK FRAMES

Made in different sizes to suit all requirements. Frames are all of cast iron, of heavy section throughout, planed on top and bottom, with mandrel boxes lined with high grade babbitt. Mandrels are exceptionally large, of forged steel with forged collar, and the guide is the famous Parkhurst steel saw guide with steel splitter.

We manufacture a complete line of up-to-date Sawmill Machinery for either Band or Circular Mills.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

Vol. 38

Toronto, January 1, 1918

No. 1

Wholesale Association Nearing Completion

The declaration of purposes contained in the constitution adopted by the Wholesale Lumber Dealers' Association, Incorporated, which is being formed at Toronto, indicates definitely the scope of the work of the association. The objects for which the association is formed, according to this statement, are to protect the members against unbusinesslike methods in the trade; to foster the lumber trade; to reform abuses in the trade; to secure freedom from unjust and unlawful exactions; to diffuse accurate information among its members as to the standing of merchants and others with whom the trade is conducted, and to produce uniformity and certainty in the customs and usages of the trade; to settle differences between members by arbitration or otherwise, and to promote a more enlarged and friendly intercourse between them.

It is evident from this that the benefits arising from the formation of this association may be made very extensive. At the same time those who have been working actively in bringing about this move have had in mind the possibility of creating a body which will not only carry on work of its own definite and valuable type, but will be an added source of strength to the whole lumber trade and industry. A very interesting discussion took place at the organization meeting, held in Toronto, at which this point was made clear. There was a feeling on the part of a few of those present that the formation of an association to be known as the Wholesale Lumber Dealers' Association "of Canada," which was the proposal in its original form, might have an injurious effect upon the Canadian Lumbermen's Association, inasmuch as it would be possible that an association under such a name might overlap the field of the Canadian Lumbermen's Association. The discussion served the useful purpose of demonstrating very definitely that there was no intention of overshooting the mark in such a way, but that the desire of the promoters of the new association was to create an association which would be able to deal effectively with the more intimate and local problems of the trade, such, for instance,

as the exchange of information regarding credits, and that in this and all other respects it might also be a factor in promoting the welfare of the Canadian Lumbermen's Association by co-operating with it in urging such matters as were in the interests of the whole trade and industry.

A brief glance at the history of the new organization will clear up this point. At the beginning of 1917 the Canadian Lumbermen's Association was considering the possibility of creating a credit bureau as a branch of its own work. A discussion of the subject, however, led them to lay the matter aside, and in an unofficial, but none the less definite manner, leave it to be taken up in different localities where it could be handled more effectively in a local manner. This led to a consideration of the subject by the wholesale trade of Ontario. A canvass of the trade showed a strong feeling in favor of organizing a wholesale credit bureau, and a group of wholesalers made considerable progress in the preparation of a plan for organization along these lines.

In the meantime, however, the wholesale members of the Lumbermen's Section of the Toronto Board of Trade came to the conclusion that it would be a wise move on their part to organize a wholesale association, and, in order to get the views of the trade on this subject, a dinner was held on November 16, to which wholesalers were invited. It quickly became evident at this meeting that there was a feeling in favor of forming an association, not simply of Toronto wholesalers, but of all who would be interested in the Ontario wholesale lumber trade, and that one of the chief activities of this association should be a bureau of information, or a credit bureau, which would provide for exchanging and securing in other ways all information available regarding the financial condition of customers of the trade. Thus it happened that the two proposals were merged and a plan evolved for the formation of a wholesale lumber dealers' association. It was thought that the value of such an association, while confined for practical purposes in its credit information operations to the Province of Ontario, would be more effectively developed by making it possible for dealers in other parts of Canada who were selling to the trade in Ontario to become members. For this reason the words "of Canada" were inserted in the title of the association. As this title, however, caused anxiety to those who are keenly interested in the Canadian Lumberman's Association, a motion to eliminate the words "of Canada" was promptly agreed to and carried.

As the situation now stands, the preliminary arrangements for the formation of a wholesalers' association along the above lines have been carried out. Incorporation has been applied for to the Dominion Government, and the first annual meeting of the association will be held on January 11, when it is hoped that matters will be sufficiently advanced for the association to make a definite start in its career of usefulness. Practically all the wholesale lumber dealers in Toronto and quite a number of those in other parts of the province have already promised their support, and the outlook for the association is exceptionally promising.

The Ontario Retail Lumber Dealers' Association

The retail lumber trade of Ontario has taken the first step towards putting its individual members in the same class of progressive merchants as their fellow-dealers in the prairie provinces of Canada and in many of the states of the Union. By organizing an association which will be charged with the promotion of the welfare of the trade they have placed themselves in an enviable position so far as their fellow-retailers are concerned in other parts of Canada where association ideas have not yet been carried out.

The objects of the Ontario Retail Lumber Dealers' Association, as outlined in the constitution adopted at the organization meeting, are of a nature to commend themselves to all members of the trade. They include, in the first place, the securing and dissemination to members of any legal and proper information which may be of interest and value to the members in their business as retail lumber dealers. Other objects are to correct business abuses in the lumber industry, to promote uniformity in customs and usages of the lumber trade in

Ontario; to standardize lumber grading and factory work, and to co-operate generally in such matters as legislation and insurance.

The constitution emphatically prohibits the adoption by the association of any rules, regulations, or by-laws which will in any manner stifle lumber production, restrict trade, or regulate prices. No coercive measures of any kind can be practised toward anyone, either to induce him to join the association, or to buy or refrain from buying from any particular wholesaler or manufacturer.

Any person, firm, or corporation in Ontario regularly engaged in the retail lumber trade carrying an assorted stock of lumber and building material reasonably commensurate with the demands of his community is eligible for membership.

These are the outstanding facts in connection with the association. Other clauses deal with the officers and their duties, and enlarge upon some of the ways in which the association will be in a position to render valuable service to its members. The constitution adopted is a good and workable one, leaving plenty of scope for good work, and it is based upon the principle that the larger problems of the trade shall be handled by a central office, with headquarters at Toronto, while local matters shall be attended to by local associations formed in each of the five districts into which the province has been subdivided for this purpose.

With a working scheme of this nature provided there is no reason whatever why the Ontario Retail Lumber Dealers' Association should not speedily become an exceptionally important section of the lumber distributing business. In the past retailers have been limited in their field of usefulness to the actual distribution of their goods. The planning and carrying out of anything in the way of a co-operative scheme of education among retailers in order to enable them to be of greater service to their communities has not been possible, firstly, on account of the lack of a recognized association, and, secondly, on account of the existence in many localities of unfriendly competition among retailers. There is no reason whatever why competition should not be keen and vigorous wherever two or more dealers are catering to the trade in the same locality, but in the past, competition, which has started as competition pure and simple, has frequently developed into cut-throat antagonism, bringing disaster without involving any compensating benefits.

The day of this sort of thing is past. Its folly is recognized by everyone who makes any pretence to be a modern merchant. In its stead there has developed an appreciation of the fact that competition of a businesslike nature may go hand in hand with co-operation in regard to all such matters as may be generally classified as education both of the dealer and the consumer. The true ideal of this whole movement is that of improving business conditions by rendering greater service. It is a straightforward, manly ideal, which cannot fail to make a man's business more attractive and profitable, while extending to the consumer an assisting hand which will be readily appreciated when its true spirit is recognized.

Bearing these ideals in mind, it is not difficult to imagine in what direction the activities of an association of this type will be best exerted. First of all, the exchange of information between members regarding their business methods is all important, so as to enable them to adopt safe systems of cost accounting, credit extension, etc. This is essential to any well-conducted business, and its most elementary factors can be worked out by co-operation much more effectively than by individual effort. These are educational features, and others of a similar nature are the distribution of information regarding stock arrangement, building plans, salesmanship, estimating, advertising, and many other matters which come up in the conduct of the retail lumber trade. These things lie at the foundation of the business, and unless they are properly understood the dealer is in continual danger and the business is a greater source of worry to him than of profit. They constitute the groundwork of any well organized retail lumber dealers' association, and definite steps have already been taken for including such matters in the work of the Ontario association.

Another direction in which co-operation will be effective for Ontario retailers is in the correction of abuses and the promotion of uniformity in the customs and the usages in the trade. It is not difficult

for any retailer to imagine how great a field lies open in this direction. Co-operation will be specially effective in promoting good legislation and working out more satisfactory conditions in regard to grading and inspection.

In short, there is a great field of usefulness for the Ontario Retail Lumber Dealers' Association, and it is important that dealers throughout the province should back up the efforts of those who have given the best part of a year's hard work and thought to the carrying out of the preliminary arrangements. Much hard work lies before those who have already put their shoulders to the wheel, and it is greatly to be hoped that the other members of the trade will show their appreciation of what has been done already by joining the association and taking an active interest in its development.

Hardwood War Service Formed in United States

One of the latest developments in the U. S. government lumber purchasing plans is the establishment at Washington of the National Hardwood Lumber Association War Service Board, headquarters Munsey Building. The establishment of this War Service Board is at the request of R. H. Downman, Lumber Commissioner of the War Industries Board, who is charged with the duty of supervising the lumber purchases of the United States and its allies.

The War Service Board will be organized for action at once under the auspices of the National Hardwood Lumber Association, whose secretary, Frank F. Fish, will be the director at Washington. The director of the board will have the advice and counsel of Horace F. Taylor, Buffalo, who was appointed to the working staff of the Lumber Commissioner when the Advisory Commission to the Council of National Defense was reorganized a few weeks ago. Membership in the board will not be confined to members of any association, but will be open to all who own and control stocks of hardwood lumber anywhere in the United States.

The organization of the bureau will begin without delay. Invitations will be sent to all owners of hardwood lumber to file with the board an accurate inventory of their stock, giving details of amount, thicknesses and grades. A condition of membership will require regular advice of changes in inventory and in line with the government's policy of dealing only with owners of materials, as a safeguard against speculation in the matter of government supplies, the filing of a false inventory will automatically terminate the member's connection with the War Service Board.

The invitation to participate in the War Service Board will be followed up as soon as possible by special meetings of hardwood dealers in the leading markets of the country, such as Chicago, St. Louis, Cincinnati, Buffalo, New York, Philadelphia, etc., at which the purposes and method of operation of the board will be fully described. In calling these sectional gatherings the Board solicits the co-operation of local trade organization to bring out a full representation of the hardwood dealers in those respective markets, in order that every available foot of lumber may be placed at the disposal of the government as may be needed.

Great Britain Asking for Ash Trees

An appeal is being made by the British Aerial League, to owners of ash trees, that they give their trees to the British Government for the purpose of airplane construction. Already between 3,000 and 4,000 ash trees have been offered, and it is expected that this will shortly be increased to 50,000 trees. Even this is far below the requirements of the government, which are expected to exceed 200,000 trees during the next twelve months. The plan is to ask English land owners to offer their trees standing at a price of 4s 6d per cubic foot. The government undertakes to do the felling, carting, etc. At the same time, the League, of which Lord Montague, of Beaulieu, is president, has arranged to plant two saplings in the place of every ash tree taken. It is hoped in this way to create a reserve of the finest ash in the world.

Freight Rates on Lumber Advanced

Railway Companies Granted Increases on All Kinds of Freight Averaging 15 Per Cent. of Previous Charges — Details of the Advance

The application of the Canadian railroads for permission to increase their freight rates by 15 per cent., which was heard recently by the Board of Railway Commissioners for Canada, has practically been granted, though the details do not include a general flat rate increase, but a series of increases averaging about 15 per cent., but arranged so as to interfere as little as possible with existing rate differences. So far as the rates on lumber are concerned, the increases adopted by the Board are those which were recommended by Mr. Hardwell, the Board's traffic expert, in a report recently submitted. In his report Mr. Hardwell says:—

"I find that the adoption of the following recommendations would not only afford a fair basis, but would approximate nearly fifteen per cent.

"To Alberta destinations, also to C. P. R. mainline stations as far east as Mortlach, Sask., the increase to be 3c per hundred lbs.

"To all other destinations in Saskatchewan, the increase to be 4c per hundred lbs.

"To destinations in Manitoba, also in New Ontario east of Port Arthur, the increase to be 5c per hundred lbs.

"To a large number of destinations these increases would equal fifteen per cent.; to others they would be slightly over or under fifteen per cent. From the Ontario mills to Winnipeg, the rate would advance from 33c to 38c, or precisely fifteen per cent. From the coast mills, from 40c to 45c, or 1c less than fifteen per cent.

"From British Columbia to Eastern Canada, I would increase the difference over the rates to Port Arthur 10 per cent., as recommended for the class rates.

"From the Interior and Coast mills respectively, the rates to Toronto points would go up from 60c and 67c to 67c and 74c. 110 per cent. of the through rates, as first proposed would give 66c and 73½c.

"To Montreal points the result would be similar. From the other lumber shipping territories, I submit the following recommendations:

"From Northern Manitoba and Saskatchewan spruce districts, fifteen per cent., subject to a maximum of 3c per hundred lbs., to destinations in Saskatchewan, also in Manitoba, east to Winnipeg, and 4c to those of Alberta and east of Winnipeg to Port Arthur.

"From the Lake of the Woods and Rainy River districts 15 per cent., subject to a maximum of 3c per hundred lbs., to destinations in Manitoba, and 4c to those in Saskatchewan and Alberta.

"From Port Arthur 15 per cent., subject to a maximum of 3c to Manitoba, 4c to Saskatchewan, and 5c to Alberta.

"Between points in eastern Canada 15 per cent. flat. As the highest local eastern rate appears to be 20c, this would make a maximum advance of 3c.

"Under this schedule the rate differences from the different competing mills would be maintained as they now are. Insofar as the bulk of the movement is concerned this will result in a 15 per cent. increase. In some instances the increase will not amount to 15 per cent. and in others the percentage increase will be slightly in excess of 15 per cent."

There has not been sufficient time since the announcement of the above rate increases to obtain the opinions of lumbermen regarding their effect. There is one very evident result, however, namely, that the lumber trade will have a heavy added burden to carry, and that it will fall very heavily upon the British Columbia trade, which will now have to pay a rate of 67c to 74c per hundred pounds to Ontario points, whereas the rate on southern pine, the chief competitor of the B. C. products, remains at about 36c per hundred pounds.

Montreal Association's Annual Meeting

Mr. Philip D. Gordon is the new president of the Montreal Lumber Association, elected at the annual meeting held in the Board of Trade on December 11. The other officers are: Vice-president, Mr. Geo. Grier; treasurer, Mr. F. W. Cotter; directors, Messrs. Geo. C. Goodfellow, D. H. McLennan, W. A. Filion, and T. J. Rutherford. Mr. Arthur H. Campbell was unanimously chosen as the association's nominee for election to the Council of the Board of Trade.

The annual report, presented by Mr. Arthur H. Campbell, the president, referred to the action of the railways in issuing tariffs advancing minimum carload weights, and the appeal to the Railway Commission. The Association gave careful consideration to the Canadian Car Service rules, the president and Mr. Tilston representing the views of the association at the several sittings of the Railway Commission. The Association was represented by the president and other members at a joint meeting of the transportation bureau committee and representatives of the branch associations of the Board of

Trade held on June 18, to consider the 15 per cent. general advance in freight rates, when it was decided to inform the Council of the Board that the application of the railways for a general increase would not be approved. In view of the car shortage and urgent need of railway equipment, Mr. Campbell strongly urged on all members to make every effort to load freight cars to their utmost capacity.

Mr. Campbell also referred to the fact that he was a member of the committee to raise a testimony to Mr. R. S. White, the retiring collector of customs, and concluded by expressing his appreciation of the support received by him in the Victory Loan campaign from members of the Association and the trade generally, including their employees. As president, he was a member of the employees' committee and charged specially with securing subscriptions from the lumber trade and their employees. The work in this connection was made exceedingly pleasant by the hearty co-operation of every firm an individual with whom he was brought in contact, and he wished to thank all the members personally, and congratulate them on the generous manner in which they responded to the call for subscriptions.

Pulpwood Consumption and Wood Pulp Production 1916

The United States Forest Service undertook the compilation of statistics on pulpwood consumption and wood pulp production in 1916, in co-operation with the News-Print Manufacturers' Association, and has published its final report. In 1916 the reported consumption of pulpwood in the United States was larger than for any previous year for which similar statistics were collected. The total quantity used by the 230 establishments reporting was 5,228,558 cords, an increase of 757,795 cords, or 17 per cent., over the 4,470,763 cords consumed by the 223 mills reporting in 1914, the last year for which statistics of this kind were compiled. Of the total consumption, 4,444,565 cords were of domestic production and 783,993 cords were imported. The increased consumption of pulpwood naturally resulted in a larger output of wood pulp. The quantity produced during 1916 amounted to 3,271,310 tons and represents an increase of 378,160 tons, or 13 per cent., more than the 2,893,150 tons produced in 1914. Of the total amount of pulp produced during the year, 1,505,547 tons were manufactured by the mechanical process, 1,401,600 tons by the sulphite process, 290,724 tons by the soda process and 73,439 tons by the sulphate process.

During 1916 wood of 21 different species was employed in the manufacture of pulp. Spruce continued to hold first place as the premier pulpwood contributing 3,101,660 cords, or slightly more than 59 per cent. of the total number of cords consumed by the industry in 1916. Of this number 2,399,993 cords were of domestic production and 701,667 cords were imported, all from Canada. The consumption of spruce in 1916 was greater than the quantity reported in 1914 by 440,865 cords. Hemlock was second in importance, the quantity used by the plants in 1916 being 760,226, or 14.60 per cent., of the total quantity of all species of wood reported. The quantity reported was greater than the 1914 consumption by 157,472 cords. The total amount of aspen used during the year amounted to 411,696 cords, placing it third in rank among the woods used by the industry. Of the total quantity consumed 329,370 cords were of domestic and 82,326 cords of foreign production. Balsam fir came next in the list, with a total of 301,032 cords, or over twice as much as was used in 1914. In 1914 a total of 141,359 cords of pine was reported by the mills, of which 79,322 cords were listed as Southern yellow pine and 62,037 merely as pine without further classification. In this report the pine which was reported has been separated into yellow pine and jack pine. Of the former there were 90,310 cords reported and 80,068 cords of the latter. Taken as a whole and compared with the total quantity reported in 1914, pine shows an increased consumption in 1916 in comparison with the 1914 figures of 29,019 cords. The consumption of white fir in 1916 in the manufacture of pulp was 49,425 cords, or 9,777 cords more than was reported in 1914. The total quantity of yellow poplar used during the year was 37,974 cords. Other woods reported were, in the order of the quantity consumed: Gum, 37,391 cords; tamarack, 33,271 cords; cottonwood, 22,211 cords, and basswood, 11,481 cords, the latter wood being used in sufficient quantity to be classed separately for the first time in these statistics. The quantities reported for these species all represent increases over the amounts reported for the same woods in 1914. The last item of consumption shown in the tabulation consists of 200,844 cords of slabs and other types of mill or woods waste. This material contributed 3.9 per cent. of the total consumption in 1916, and less by 53,043 cords than the quantity reported in 1914.

According to a despatch from Vancouver, B.C., it is possible that shipyards in British Columbia will soon be engaged in the construction of vessels for the Australian Government. Negotiations are now being carried on in this connection.

Ontario Retailers Form Association

Central Organization and Five Locals Created—Dealers from all Sections Attend Initial Meeting at Toronto—Thos. Patterson of Hamilton the First President

Thos. Patterson, Hamilton, elected President Ontario Retail Lumber Dealers' Association.

A meeting of retail lumbermen from many parts of Ontario was held in Toronto on December 21st for the purpose of organizing an Ontario Retail Lumber Dealers' Association. The attendance at the meeting was large and included many of the most successful retail lumber dealers in the province. A luncheon was held at 12.30 p.m. in the Board of Trade assembly room, and, at the conclusion of the luncheon, the dealers immediately got down to business. Mr. J. B. Reid, Toronto, seconded by Mr. T. A. Patterson, Toronto, moved that Mr. J. C. Scofield, Windsor, Ont., act as chairman of the meeting, and that Mr. H. Boulton be secretary. This motion was carried. The meeting was composed chiefly of delegates appointed by the five local districts into which the province of Ontario has been subdivided in connection with the plan of organization. These five districts are forming local associations, and their delegates were present to carry out the plan for organizing the Central Association. There were also present a few retailers who had not been appointed as delegates, but were sufficiently interested to attend the meeting on their own account.

Among those present were:—J. C. Scofield, Windsor Lumber Company, Windsor; R. A. Laidlaw, R. Laidlaw & Company, Toronto; B. F. Clarke, Clarke & MacPherson, Glencoe; Allan Watt, Watt Milling & Feed Company, Toronto; E. M. Barrett, Barrett Bros., Ottawa; K. J. Shirton, Dunnville; A. G. Rose, Estate Jas. Davidson, Ottawa; Chas. Hubbell, Thamesville; E. C. Russell, Walker Sons Ltd., Walkerville; Geo. H. Belton, London; C. Robertson, W. C. Edwards & Company, Ltd., Ottawa; W. E. Savage, Mimico; A. G. Cheney, Vankleek Hill Mfg. Company, Vankleek Hill; W. B. Tennant, John B. Smith & Sons, Ltd., Toronto; T. L. Canfield, R. E. Butler Lumber Company, Woodstock; W. J. Aitchison, D. Aitchison & Sons, Hamilton; J. A. Leberge, Sudbury; C. H. Walters, McAuliffe-Davis Lumber Company, Ltd., Ottawa; W. N. Tupling, J. R. Eaton & Sons, Ltd., Orillia; H. A. L. Swan, Secretary, Ottawa Lumbermen's Credit Bureau, Ottawa; K. Hall, Kitchener; C. T. Smith, R. Laidlaw & Company, Toronto; John McGibbon, F. McGibbon & Sons, Sarnia; J. B. Reid, Toronto; Wm. Barrett, Canada Lumber Company, Weston; T. A. Patterson, Mickle, Dymont & Son, Toronto; A. E. Eckardt, R. Laidlaw & Company, Toronto; Guy Long, Consumers Lumber Company, Hamilton; W. C. Irvin, Gibson, McCormack Irvin & Company, Toronto, and W. H. Thomson, Thomson Bros., Port Credit.

Mr. Scofield and Mr. Boulton made brief addresses outlining the events leading up to the calling of the meeting. On motion of Mr. Geo. H. Belton, seconded by Mr. E. M. Barrett, it was then carried "that we proceed at once to organize the Ontario Retail Lumber Dealers' Association."

The chairman first read an interesting letter from Mr. C. A. Bowen, secretary of the National Retail Lumber Dealers' Association of the United States, in which Mr. Bowen extended to the Ontario Association the congratulations of the United States Association and offered his association's assistance whenever the Ontario dealers found that it would be acceptable. Mr. Bowen also dealt vigorously in his letter, with the necessity for securing ample funds to carry on the association work. It was important, he said, not to value such an association too cheaply, and to be sure that its manager would not be crippled in his efforts on behalf of the members, for want of funds. A few striking suggestions were also included in Mr. Bowen's letter in regard to the great extent of the field of operation of a retail lumber dealers' association. He referred in particular to the extensive effort now being made by the United States Association to carry out a survey of the cost of operating retail lumber businesses throughout the United States, so as to strike the various district averages. The United States Government is at present considering the wisdom of regulating prices of lumber for the wholesaler and the retailer. It has already regulated prices from the manufacturer to the government. The main object of the survey of cost on the part of the re-

tailers is to furnish the government with authoritative information upon which to base its price regulation decisions.

Constitution and By-laws Adopted

The first matter taken up by the retailers was the adoption of a constitution and by-laws. A number of sets of printed constitutions and by-laws were available in printed form.

Mr. H. A. L. Swan, Secretary of the Ottawa Lumbermen's Credit Bureau, submitted a draft constitution and by-laws which he had drawn up after studying a number of constitutions, including those of the Western Retail Lumber Dealers' Association of Canada, the National Retail Lumber Dealers' Association of the United States, and the Ohio Association of Retail Lumber Dealers. After a short discussion it was decided to take up Mr. Swan's draft constitution and by-laws, clause by clause. The dealers present then settled down for a long afternoon's work, the result of which was the adoption of an excellent constitution and by-laws. It was found that Mr. Swan's draft constitution served the purpose pretty well, a few amendments being required and one or two points which were left in abeyance being determined upon.

The first point of importance was that relating to the annual dues. The decision of the meeting on this subject was that the annual dues should be based on a sliding scale, regulated according to the annual volume of business of the firms. The scale adopted is as follows:—

Annual business	\$50,000 and under	fee	\$10.00
"	"	\$50,000 to \$100,000	" 15.00
"	"	\$100,000 to \$150,000	" 25.00
"	"	\$150,000 to \$200,000	" 30.00

And for every \$50,000 additional thereafter the fee to advance \$5.00, with a maximum limit of \$50. In connection with this schedule, it was also decided that firms which are admitted in the lowest fee class will not be entitled to receive the Lumbermen's Training Course, payment for which is included in the fees of all the other classes. Members in the lowest fee class who desire to avail themselves of the Lumbermen's Training Course will pay an additional \$5. This course consists of fourteen lessons on subjects of great importance to retail lumber dealers. The lessons have been drawn up by experts and deal in a practical manner with the retail dealers' chief problems, from elementary drafting to estimating, plan reading, yard operation, bookkeeping, credits and collections. They help the retailer to become a practical builder and a good business man. Arrangements are now being made for distributing these to the members as they join the association.

The next subject of importance that led to discussion in connection with the constitution was the determination of the number of officers and directors. After considerable discussion an agreement was reached that they should consist of a president, vice-president, secretary-treasurer, and ten directors, two directors being chosen from each of the five districts into which the province is divided for the purposes of the association. These officers are to be elected annually and five of them are necessary to constitute a quorum. A quorum of the whole association will consist of ten members. At the annual meeting of the association members will each have one vote by representation at the meeting.

On motion of Mr. A. S. Nicholson, seconded by Mr. J. A. La-berge, it was decided that the organization work in each of the five local districts be carried on by the local dealers or secretaries of local associations and that the expense be borne by the central association. The motion also included a recommendation that the local secretaries and others interested in the association immediately inaugurate a campaign to obtain members.

Officers Elected

The last matter of business to be attended to was the election of officers, which resulted as follows:—President, Thos. Patterson, Hamilton; vice-president, W. J. Smith, Toronto; directors for eastern district, E. M. Barrett and A. G. Rose, Ottawa; southern district, B. F. Clarke, Glencoe, and J. C. Scofield, Windsor; western district, K. J. Shirton, Dunnville, and A. S. Nicholson, Burlington; northern district, J. A. La-berge, Sudbury, and Howard Hesson, Sault Ste. Marie; central district, W. J. Hetherington, Toronto, and a representative of the firm of J. R. Eaton & Sons, Orillia.

This concluded the business of the meeting, and a meeting of the newly elected officers and directors was held, at which Mr. H. Boulton was elected secretary-treasurer of the central association.

Wholesale Lumbermen Form Association

Constitution and By-Laws Adopted at Well Attended Meeting Held in Toronto—
Annual Meeting to be Held January 14th

The second meeting of the wholesale lumber trade held at Toronto, took place on Friday, December 21st, after a dinner in the evening, at the Albany Club. The purpose of the meeting was to complete arrangements which had been made at the first meeting for the organization of a wholesale lumber dealers' association. A committee on Constitution and By-laws, composed of Messrs. A. E. Clark, C. W. Wilkinson, A. E. Eckardt and J. H. Terry, which had been appointed at the previous meeting, had completed its work and submitted the result to the second meeting. The constitution and by-laws thus drawn up were gone over in committee of the whole and adopted clause by clause, after making a number of amendments.

As at the first meeting, there was an excellent attendance at the meeting on December 21st, representing practically the whole of the wholesale trade of Toronto and some from outside of Toronto. Mr. A. E. Clark, chairman of the dinner committee, occupied the chair. Before proceeding with the business of the meeting, he stated that they had present with them Mr. W. E. Bigwood, who had come all the way from Byng Inlet, to attend the meeting, Lt.-Col. R. S. Wilson, of the Wilson Lumber Company, Toronto, and Mr. Guy Long, of Hamilton. He called upon each of these to address the meeting briefly.

Mr. Bigwood opened his remarks with a reference to conditions in northern Ontario, which he said were extremely difficult at present. Not over 65 per cent. of the logs that should have been skidded by this time, had been skidded, and he thought that the manufacturers in northern Ontario were entitled to a large measure of sympathy from the wholesale lumber trade.

He then discussed the proposal of the formation of a wholesale lumber dealers' association, and said that he considered it a good thing that such an association should be formed, as nothing in the world did so much good to business men as getting together and exchanging their views in regard to business conditions. Getting together in small groups, or large ones, promoted good feeling among colleagues. Mr. Bigwood referred to the work of the Canadian Lumbermen's Association and stated that it had been successful in promoting the interests of lumbermen in Canada in several instances during the past year. For instance, it had been instrumental in having a clause inserted in the proposed new railway act, requiring that when any change was to be made in freight rates, railway companies would have to give their reasons. Heretofore the railway companies had simply announced their changes and it had been incumbent upon any who had objected to the changes to state their reasons and make good their objections. Although the railway bill had not been passed by the House of Commons, they felt that they had obtained good results by getting a clause to the above effect inserted during the discussion of the bill in the House. They had also taken part in the fight against the increased minimum carload weights and, as all Canadian lumbermen knew, the lumbermen had obtained a good compromise on this subject. The last thing the Canadian Lumbermen's Association had done was to send a very large quantity of socks to the Canadian Forestry Battalions overseas.

In conclusion Mr. Bigwood called attention to the fact that the next annual meeting of the Canadian Lumbermen's Association was to be held in Montreal on February 5th at the Windsor Hotel, and he hoped that there would be a good attendance of members from Toronto.

Lt.-Col. R. S. Wilson confined his remarks entirely to a description of some of his experiences in France, speaking in the highest possible terms of the patriotism, good fellowship, endurance and all-round manliness of the Canadians who were sharing in the struggle for liberty on the western front.

Mr. Guy Long, Hamilton, declared that any time lumbermen could get together and rub shoulders in order to smooth away their trade difficulties, he wanted to be on hand. A great organization movement was now on foot throughout the lumber trade, both in Canada and the United States. He remembered the time when the chief aim of a lumber dealer was to put his competitor down and get the best of him if possible. Today there was a much different spirit. The ideal of the trade was to give "service," and to do the other fellow as much good as possible. They would see how this paid them when the other fellow did the same thing to them. Making money was not the only thing in the world. He believed that the greatest pleasure a man could have out of his business was in the actual conduct of the business itself. It was striking to note how much

more pleasure there had been in doing business in the lumber trade during the last few years, than there was about twelve years ago.

Constitution and By-Laws Adopted

The Constitution and By-laws which had been drawn up by a special committee were then read over as a whole and subsequently taken up clause by clause in committee of the whole. The most important discussion developing out of the adoption of the constitution arose over the wording of the first clause, which, according to the draft, provided that the name of the association should be "The Wholesale Lumber Dealers' Association of Canada, Incorporated." Mr. A. C. Manbert enquired as to the exact scope of the association. He expressed a strong conviction that the success of such an association would be dependent greatly upon the extent to which it was able to devote its efforts to serving the wholesale trade in a definite section of the country, Ontario as a whole, and even Toronto in particular. He believed that there was danger of over-shooting the mark, if they sought to create an association such as might be understood under the name proposed, viz., "The Wholesale Lumber Dealers' Association of Canada, Incorporated." It seemed to him that under such a name they might appear to be covering ground already covered by the Canadian Lumbermen's Association. He suggested that the chairman of the Constitution Committee should explain as clearly as possible what the scope of the proposed association would be.

Mr. A. E. Eckardt replied to Mr. Manbert and explained that while there was no intention whatever of seeking to overlap the field of the Canadian Lumbermen's Association, the object of inserting the words "of Canada" in the title was to enable the association to accept members from outside points, even British Columbia, or the eastern provinces. One of the chief objects of the association would be the interchange of credit information regarding customers, and if a wholesaler in British Columbia, or in Quebec or elsewhere, should be selling to the Ontario trade, he would be able to make use of the credit information services of the association, as well as being able to furnish information of value to the association. Having the words "of Canada" inserted in the title seemed to make it more feasible to deal with cases of this nature.

There was some further discussion of this subject, in which Mr. Bigwood, Mr. Manbert, Mr. A. E. Clark and others took part. Finally, on motion of Mr. J. L. Campbell, seconded by Mr. R. G. Chesbro, the words "of Canada" were eliminated, Mr. Campbell pointing out that in this way the differences of opinion between members would be overcome, while the elasticity of the association would not be reduced. This proposal met with the approval of everyone present. The discussion was useful, moreover, in bringing out the fact that it was the hope of all who are interested in the wholesalers' association, that it would be able to co-operate extensively with the Canadian Lumbermen's Association in promoting the mutual welfare of all members of the trade.

Other amendments of a less important nature were made to some of the clauses and finally the proposed constitution and by-laws were adopted.

On motion of Mr. W. J. Lovering, seconded by Mr. J. L. Campbell, the committee on Constitution and By-laws was appointed a provisional board of directors to hold office until the annual meeting, which will take place on January 11th. It is expected that before the annual meeting takes place the letters patent of incorporation will have been obtained from Ottawa and that officers and a board of directors will be finally appointed and the association ready to proceed with its regular business.

The annual meeting and banquet of the Canadian Lumbermen's Association will be held in Montreal on February 5. The headquarters will be the Windsor Hotel. The following committee have all the arrangements in hand: Messrs. W. T. Mason, chairman; Arthur H. Campbell, D. H. McLennan, Geo. Goodfellow, William Rutherford, W. Gerard Power, Geo. W. Grier, and E. H. Lemay.

The Geo. Hall Coal and Transportation Company, Ogdensburg, N.Y., have taken over the business of the Frontier Trading Company, of Ogdensburg, and the Canada Shipping Company, of Montreal, thus securing an extra fleet of sixteen vessels with an aggregate tonnage of 20,000. The vessels will be placed in the coal and wood pulp trade between ports on Lake Ontario and the St. Lawrence River.

Dry Kilns for Government Service

The recent development of the war situation has made it apparent that the United States is destined to take a substantial part in the fight for freedom, says T. D. Perry in *Hardwood Record*. Manufacturing plants are, therefore, shaping their factory output along such lines as to contribute directly to the equipment needed for the war, or to help equip the American farmer.

Woodworking plants which make wagons, auto trucks, freight cars, airplanes, ships, and the like, find an unprecedented demand for their product, entirely beyond their normal capacity. Usually the above have been accustomed to maintain their yard stock of lumber in sufficient quantity to provide normally six months and, preferably, twelve to eighteen months of thorough air drying.

The government's unprecedented demand is rapidly depleting these lumber stocks, and the woodworking plants are faced with the absolute necessity, temporarily at least, of drying all kinds of lumber practically green from the saw.

In case of the soft woods (conifers) this problem has been solved on a commercially economical basis. In so far as green hardwoods are concerned, considerable progress has been made toward satisfactorily drying one-inch lumber and thinner. This is practically true of the so-called "soft" hardwoods, such as poplar, cottonwood, gum, some kinds of mahogany, and the like.

In the case of oak, ash, hickory, etc., in the two, three, and four-inch thicknesses, the problem of drying green lumber is decidedly difficult and far from a satisfactory solution.

The Forests Products Laboratory at Madison, Wisconsin, maintained jointly by the United States Government and the University of Wisconsin, has been conducting a series of experiments and demonstrations, and has brought out and developed the humidity regulated kiln under patents taken out in the name of H. D. Tiemann, chief physicist, which patents are dedicated to the public.

This kiln has been in use at the Madison laboratory for several years, and typical installations have been made, or are in process of construction, for Moline Plow Company, Moline, Ill.; International Harvester Company, Chicago; Redwood Manufacturers' Company, Pittsburg, Cal.; N. and W. R. R., Roanoke, Va.; Mandt Wagon Works, Stoughton, Wis.; Schoettler Wagon Works, Chicago, etc.

The claims set forth for this kiln are the ability to dry, without substantial loss through degrade, any kind and any thickness of hardwood. Those whose installations are far enough progressed report excellent success.

It is not claimed nor expected, so far as the writer is aware, that this kiln will dry at the normal speed of commercial kilns in every-day use, nor is it reasonable to suppose that it is as simple in operation or

Fig. 2—Original type of the Tiemann kiln.

can be operated at the ordinary cost of kiln-drying. Green stock requires longer time and more careful kiln manipulation than most plants practice.

As a matter of fact, most users of kilns are accustomed to operate their kilns "by guess and by gosh," and, for that reason, the Tiemann kiln appears unduly complicated and elaborate. Its provisions for control and operation, however, are very complete, and any operator of ordinary intelligence can master their operation in a short time.

There is no question but what at the present time this Tiemann kiln offers one solution of the drying of thick (2 in. to 6 in.) green oak and hickory, for wagon, truck, and car builders. In spite of this fact, many concerns hesitate to incur the cost of building sufficient special kiln capacity to handle the large quantity of green stock necessary for immediate government deliveries. Few wagon manufacturers, for instance, feel justified in embarking on a policy that commits them to the use of green lumber or the use of a type of kiln that is designed primarily for green lumber, and that is slower and more expensive to operate on ordinary stocks than the best of the approved types of kiln on the market to-day.

It is rarely possible to modify or remodel existing kilns without either unreasonable expense, or destroying the subsequent use of the old kilns by any except the newly-incorporated process.

The alternative, therefore, is to select and build a type of kiln that

Fig. 1—Grand Rapids vapor kiln.

Fig. 3—Composite type of kiln.

can be operated on the Tiemann process for green thick lumber during part or all of the present emergency and that can be operated efficiently and speedily on normal kinds of lumber under usual demands.

This results in a composite type, somewhat more expensive to build than either type individually, but subject to operation under either process or a combination of processes.

The illustrations show such a composite type (Fig. 3) and also the original types of the Tiemann kiln (Fig. 2), and the Grand Rapids vapor kiln (Fig. 1). There is no reason why the same combination cannot be made with other types of kilns, provided they are of the vapor type with a downward circulation, with adequate damp air accumulation pits and outlets for damp air so situated as to combine readily with the circulation and baffle plates of the Tiemann process. Large, wide, or progressive kilns are not suitable for the combination.

The advantages of this combination type are: 1. The ability to dry thick green hardwoods. 2. The facility with which, by the proper setting of valves and dampers, the kiln may be converted to one of the best modern types of dry kiln. 3. Complete compliance with government specifications and co-operation with government inspectors.

The officials of the various war boards and engineers on government work are naturally somewhat influenced in favor of equipment that has been developed under government auspices.

The use of this composite type provides every compliance with government requirements and gives the manufacturer the opportunity of taking advantage, as well, of the best of the practical economies in kiln design and operation as developed by modern factory experience.

Old Wine in New Bottles

The incorporation of the Canadian General Lumber Company, Limited, formed to deal in lumber and other forest products, with its head office in Toronto, and an eastern office at Montreal, is one of the latest announcements of interest to the trade. While this is a new concern, its personnel is of long acquaintance in the lumber business. It constitutes rather a realignment and extension of efforts and undertakings that are not new. In a sense, its reputation is established.

When in 1908 the Canadian Pacific Railway opened its Toronto-Sudbury line, Graves, Bigwood & Company, in the rail access given to their mills at Byng Inlet, seized the opportunity to develop a car business direct from the mills, and to increase the intimacy of their acquaintance with the retail trade of Eastern Canada and the north-eastern states. To successfully serve, they established large sorting facilities and a well equipped planing mill. To utilize their lower grades and trimmings they installed a modern box shook factory. These facilities, their splendid manufacture, careful grading and service, brought speedy recognition by purchasers and each year an increased clientele.

The allied interests of Graves, Bigwood & Company had long been known as purchasers of mill cuts in Canada, and the Michigan and Minnesota sections. It followed as a natural sequence to meet the activities of their sales force, that Graves, Bigwood & Company should supplement their own stock with well-known lines to which they had entree. As a result they have drawn on all the sawmill sections of Ontario, Quebec and New Brunswick. In 1910 they started an operation at Deer Lake, Ont., on the C. N. O. Ry., to cut hardwoods. Thus they joined themselves to that field, and hardwoods have become a feature in their business.

All of this history is antecedent to, and explanatory of the new organization. In order to give increased scope to the selling force and extend the merchandising features, it has been decided to divorce the sales from the manufacturing end of the business. The Canadian General Lumber Company, Limited, has therefore been organized. Its personnel is well known, and in addition to certain of the principals of Graves, Bigwood & Company, includes the prominent members of that company's sales force. The directors are:—A. C. Manbert, president; W. E. Bigwood, vice-president; H. I. George, treasurer; J. L. Macfarlane, secretary; F. H. Bigwood, general sales; F. V. Wilson, Ontario sales; C. Villiers, eastern sales.

B. C. Lumbermen Criticize Taxation Details

Representatives of the lumber industry in British Columbia recently attended a sitting of the Provincial Taxation Board in order to lay before it the claims of the lumber industry in regard to taxation. The chief speaker for the lumber interests was Mr. Eric W. Hamber, president of the B. C. Mills Timber and Trading Company. Mr. Hamber objected vigorously to taxation of interest on capital borrowed from outside points. British Columbia was still a young province, he said, and depended greatly upon money from outside for the development of its natural resources. The lumber industry was a good illustration of this fact. Great amounts of outside capital had been invested in British Columbia forest products and in the B. C. timber industry. Without this assistance the industry could not have

reached the position it had attained today. More capital still must come from outside if the possibilities of the future were to be developed. The proposed new provincial tax would discourage outside capital from coming to British Columbia. They really should invite the outside capital rather than discourage it.

Mr. Hamber also complained of the injustice of taxing the lumber industry on either personal property or income, according to which would produce the largest tax. This injustice was all the greater on account of the tax being based on reports for each individual year. There were lean years as well as good years in the timber industry and an average should be taken for at least three years.

Another important point was the fact that taxation legislation took no account of depreciation. Some parts of the mill or logging equipment had to be replaced several times a year. No allowance was made for this in the proposed taxation. It was also unjust that a tax should be imposed on funds set aside as a reserve to cover depletion of resources. Such funds were essential to the lumber business. Another point brought up was the double taxation of incomes by the Dominion and Provincial governments. When a business paid either Dominion or Provincial taxes, the amount ought to be deducted from the assessment on which a provincial income tax was paid. Such payments should relieve a company from other assessments covering the same amounts. Mr. Hamber also dwelt on the unfairness of including in the taxation assessment, the payment of fees and salaries of managers and directors, on which an individual tax was also paid.

Mr. Hamber's remarks were corroborated by Messrs. E. C. Knight, of the Vancouver Lumber Company, J. D. McCormack, of the Canadian Western Lumber Company, and W. B. W. Armstrong, of the B. C. Loggers Association.

Mr. E. J. Palmer, of the Victoria Lumber & Mfg. Company, Chemainus, objected to the advance of from two to three per cent. in the assessment on Crown Granted Timber Lands.

Terry & Gordon Hold Second Annual Dinner

The second annual of the firm of Terry and Gordon, wholesale lumber dealers, Toronto, was held on December 27th at the Queens Hotel, Toronto, and, like its predecessor, was an exceptionally enjoyable and successful event. The members of the firm and staff were all present, with the exception of Mr. Frank W. Gordon, Vancouver, B.C., and Leon Gagne, Jr., Montreal, who were unavoidably absent. After the conclusion of the dinner an interesting programme of speeches was carried out, among the speakers being Mr. H. J. Terry and Mr. A. E. Gordon. Mr. Gordon dealt chiefly with trade conditions as he had found them during his recent trip to British Columbia. Mr. H. J. Terry discussed business conditions in other parts of Canada and reviewed the firm's progress during the past year. Other members of the staff also delivered short addresses reviewing the year's work. The firm of Terry and Gordon have had an exceptionally successful year and the speakers at the dinner all spoke enthusiastically of the outlook for the coming year's trade.

Boxes for U. S. Machined Shells

The Canada Lumberman recently received an enquiry from a firm of woodworkers in Ontario regarding the type of boxes to be furnished for the shipment of 74 MM. H.E. shells for the United States Ordnance Department. A quantity of orders for shells of this class have been given to Canadian manufacturers, who have to supply boxes for the transportation of the machined shells to the loading plants at the American side and there has been a good deal of uncertainty in Canada regarding the type of box that will be necessary. The Imperial Munitions Board report that the manufacturers who are machining these shells in Canada are required under their contract to supply the shipping boxes and that the class of box used is a matter for the manufacturer of the shells to decide, as the United States Ordnance Department does not supply drawings or specifications governing the same. It appears from the above that the machined shell manufacturers in Canada are at liberty to order any class of box they like, so long as it is satisfactory for the purpose.

Forestry Lieutenants Wanted

A letter received by the Canada Lumberman from Lt. Col. Clyde Caldwell, Officer Adminstrating the Royal Canadian Engineers, states that there are vacancies for a few officers of the rank of lieutenant in forestry units. Applicants for commissions should be between the ages of 25 and 35 and be medically fit. It is desired that they should have had experience both in lumbering operations in the woods and in sawmills. It is also desired, if possible, to obtain members of lumbering firms who are familiar with lumbering operations in their various phases. Lt. Col. Caldwell states that he will be glad to supply any further information to applicants if they will write to him. His address is care of The Department of Militia and Defence, Ottawa.

English Trade Complaining of Restrictions

The restriction in the timber trade of Great Britain which has been brought about by the extensive government control introduced early in the war and increased from time to time, has become so acute that recently a great national meeting of the timber trade was held at London to protest against the present situation. The meeting showed that the trade is no longer under any illusions as to its position. Concessions recently made by the Timber Comptroller have been found to be valueless and the trade is now unanimously demanding a fundamental change in the methods of dealing with imported timber. The government has taken away from private firms the whole of their business, obliging them to carry heavy standing charges as well as obligations they have undertaken to members of their staffs who are in their country's service, and there is no sign of the government intending to offer anything in the way of compensation. It is the opinion also of the trade that the change from individual buying to government control has been both unnecessary and harmful to the country. During the first two years of the war, importers did a large business supplying government departments with timber for war purposes at prices which today would be considered very low. The trade feels that its members, by reason of their expert knowledge, are a natural channel for supplying the country with timber and that the restrictions imposed have resulted only in a serious depletion of stocks. They believe that private trading could not have produced a worse effect than that which has developed under government control.

The National meeting was a great success and was attended by members of the trade from all parts of Great Britain. The chair was occupied by the president of the Timber Trades Federation. The following resolutions were passed:—

I. That the timber trade assures His Majesty's Government of its wholehearted desire to co-operate in measures for bringing the present war to a definite and victorious conclusion, and reiterates the desire expressed in the early days of the campaign to place its resources and its experience in so important a matter as the supply and control of the distribution of timber at the service of His Majesty's Government.

II. (a) That the timber trade views with very serious alarm the imminent practical extinction of the imported foreign timber trade owing to the action of the Government in placing restrictions in the way of importers.

(b) That, while thus practically debarred from carrying on its business, the timber trade is further handicapped by the heavy standing charges which the members necessarily have to bear in the maintenance of their establishments, and by the obligations they have voluntarily undertaken toward their staffs while in their country's service.

(c) That both from their numbers and their expert knowledge of markets and importing generally, timber importers and merchants have proved themselves the natural and established channel for providing for the requirements of the country generally.

(d) That restrictions imposed on importers and merchants have practically made it impossible to carry on their business and have resulted in creating a very serious depletion of stocks in the country, besides tending to augment the cost considerably.

(e) That in their opinion, and so far as tonnage is available, unrestricted importation should be permitted and Government control of stocks should be limited both in the interests of the country and for the purposes of the war.

III. That the trade views with grave apprehension the possibility of the Government further controlling supplies of timber after the war, and is of opinion that State purchasing and State dealing in timber after the war, for the ordinary requirements of the country, is neither defensible nor necessary, and is, moreover, unfair and harmful to the timber trade of the country, and will be strenuously resisted by it.

IV. That the timber trade views with serious alarm the interference with the home-grown trade. That the Government have entered into competition with the home-grown trade in the purchase of timber, and have forced up prices thereby. They have also appealed to the patriotism of the home-grown trade to increase their output of converted home-grown timber, and have fixed a schedule of prices at which town and port mills are unable to produce except at a loss, thereby seriously decreasing the supply. This meeting is of opinion that better results would have been obtained on proper consultation and co-operation with the home-grown trade.

V. That the Executive Committee of the Timber Trade Federation be requested to bring the foregoing resolutions before his Majesty's Government, and to take such further steps as may be considered necessary in connection therewith.

At a subsequent meeting Mr. J. B. Ball, Controller of Timber Supplies, addressed the Timber Trades Federation, and while he spoke sympathetically of the difficulties of the trade, was not able

to give any assurance that brought comfort to its members. He simply gave a summary of past events, a description of the present situation and an outline of the difficulties of the trade, leaving things precisely where they were before. In conclusion, however, he intimated his willingness to consult with a small committee, elected by the Federation, and to discuss matters with them. He suggested that such a committee should be prepared to place definite proposals before him for consideration.

Cost of Manufacturing One Thousand Shingles

The cost of producing shingles may not be fully appreciated by some purchasers to-day who are not closely in touch with the advanced cost of material and labor. The following is a statement given to the Canada Lumberman by a representative British Columbia manufacturer, showing the cost of producing one thousand XXX British Columbia red cedar shingles to-day, basing the calculations on the last two months' operations:

	Per M.
Timber	\$1.80
Bolts delivered at the mill cost \$9 per cord.	
These must be exceptionally good to produce 5 M.	
6/2 in.-16 in. No. 1 shingles. Usually about 5 per	
cent. of these are No. 2 shingles.	
Chinese contract labor43
This includes taking bolts from the pond, saw-	
ing to shingle lengths, sawing, packing, stacking on	
dry kiln trucks, and loading into cars.	
Day labor24
This includes saw filer at	\$8.00
Day engineer	4.00
Night engineer	3.50
Millwright	5.00
Boom man	3.00
Oiler	2.50

\$26.00

The average production of this six-machine mill is not over 110,000 per day, including only time lost for breakages and general repair work.

Bands, both wood and metal, including nails05
Mill supplies, including saws, oils, belts, babbitt, lace, leather,	
filing room supplies, etc.05
Overhead, including insurance and administrative15
	\$2.72

The above does not include interest on capital invested or depreciation to plant, which is considerable to any mill near salt water.

T. and N. O. Pulpwood Shipments

Pulpwood shipments were made by the T. and N. O. Railway during October to Merriton, Thorold, Ottawa, Toronto, Niagara Falls, Fulton, Norfolk, Waterton, Malone, Ont.; Johnsonburg, Pa., and Appleton, Wis., as follows:

	Cords.
October 1 to 7	2,148
October 8 to 14	1,556
October 15 to 21	1,633
October 22 to 31	2,194

7,531

Which is an increase over the preceding month of 460 cords, or 6.5 per cent.

Wood pulp and paper shipments were as follows:

	Wood pulp.	Paper.
	Tons.	Tons.
October 1 to 7	332	1,497
October 8 to 14	736	1,368
October 15 to 21	578	1,023
October 22 to 31	365	1,892
	1,951	5,780

Wood pulp shows a decrease of 33 per cent. and paper shipments an increase of 4.7 per cent. over preceding month.

Mr. J. Archibald, of the Blanchard Lumber Company, 126 State Street, Boston, Mass., recently visited Fredericton, N.B., and other important lumber centres in New Brunswick.

According to a report from Washington, D.C., the Emergency Fleet Corporation of the United States has now under construction and contract, vessels amounting to 8,395,308 deadweight tons.

The Evolution of Grades for Hardwoods

An Outline of Events Leading up to Methods Now in Use—The Select Grade—Its Relative Value

By W. L. Martin*

Well do I remember the first maple lumber I had anything to do with—about thirty-six or thirty-seven years ago—when as a lad I helped get out some fine maple planks, 4, 5, and 6 inches thick, perfectly clear, and delivered it in Big Rapids, where we received \$6 a thousand for it. I was impressed for the reason that it looked like such fine stuff but did not bring enough to pay wages. Stumpage, of course, was not considered, as the farmers were glad to get the timber out of the way. Basswood was worth a little more, but I do not remember the exact price. A little later we sold clear cherry logs at \$12 and white ash at \$15, which was not so bad. Beech was not even thought fit for stove wood.

I was not in close touch with lumber then for a few years, but in Manistee twenty-five years ago they were cutting some maple—cutting around the log—throwing out the heart squares from 4 to 12 inches square, these squares being cut into firewood and sold to the people around town. The hardwood lumber sold at that time was mostly No. 2 common and better, or merchantable hearts out, or log run hearts out or hearts measured out.

By this time the lumber was being used in more ways and by manufacturers who wanted it for certain purposes, and it became necessary to split the stock up into grades. There was also more or less difficulty over the way the lumber was inspected and measured. A great deal of it was shipped direct and inspected and measured by the buyer. It was sometimes said the buyer robbed the millman, but, of course, that was a mistake. It would take "some" buyer to get the start of the millman. There had also developed a market for the cull or heart plank. Now this was about twenty years ago. In that year the millmen and jobbers and consumers got together and organized the National Hardwood Lumber Association, and its first set of rules were put out the year following.

Rapid Growth of Hardwood Business

The hardwood lumber business was growing rapidly. The maple flooring business was getting to be large. Furniture people were cutting up lots of stock. Agricultural implement manufacturers were using thick stock. Elm was used for bending stock. Maple, elm, beech, and basswood were all used by the chair factories. School furniture was using a lot of stock, and as we have already suggested the cull was coming into use for crating and planking. Birch and ash were used to a certain extent for house trim and basswood was used for siding.

To have some system of inspection and some regulation of the measurement was a great benefit to both the consumer and the millman, even though it was not so perfect as it might be. Therefore, it was a great event in the history of the hardwood lumber business when the National Hardwood Lumber Association was organized.

A taste of this good thing at once created an appetite for more, and soon a struggle was started to add to and change the rules. More knots, more shake, more rot, more wane were wanted. But, of course, the real purpose all the time was to get the rules to define and admit such boards as experience found could be used to advantage by the majority of the consumers requiring certain grades. These fights over the grades were usually three-cornered—the millman in one corner, the consumer in the other, and the jobber in the third trying to keep the other two from getting together, which he quite frequently succeeded in doing, and thus no change would be made. The jobber is a very necessary factor in the lumber business and has a right to be considered, but he neither produces lumber nor does he cut it up, and I never could see just why he should have a right to say anything about the rules of inspection. Changes continued to be made until we have our present rules of inspection.

To go back again to the time the business was fairly swinging along under the guiding hand of the National Hardwood Lumber Association rules of inspection and the prices received for lumber at that time: Cull maple and beech were worth about \$4 a thousand; FAS maple eighteen years ago was worth \$15; No. 1 common, \$10, and No. 2 common, \$5 a thousand as graded at that time. Of course, thick stock brought a little more. A cargo of thick maple was shipped to Racine eighteen years ago at \$14 a thousand delivered. Beech was worth about \$9 or \$10 a thousand.

One of the strong factors in the maple business was the formation sixteen years ago of the Michigan Maple Company. The flooring

people wanted to buy maple at \$5, \$10, and \$15. The millmen wanted \$6, \$11, and \$16, and for that difference the maple company was organized. The millmen got their price. The maple company's great function was to show the millmen the value of co-operation and that they were not getting what their timber was worth. Prices advanced quite rapidly for a time, until they reached a more normal level with other lumber from other localities.

Have you ever stopped to think that it is only twenty years since the hardwood lumber business actually developed a practicable system of inspection and marketing, and less than that since we actually received any real compensation for stumpage, and, then, that in about ten years more the business will be practically finished in the lower peninsula of Michigan? The upper peninsula and Wisconsin will go on, of course, for a few years more.

Further, we hear a great deal these days about the conservation of our food supplies; about wheatless days and meatless days. Yet a herd of cattle can be raised in a few short years and each year the field of wheat can be harvested. When we cut down a maple tree that has taken 300 or 400 years to grow none of you or any of your descendants who can remember you will live to see another such tree in its place. Many an acre of potatoes and beans in Michigan this year produced more than was received for an acre of timber, and will do that every year. We should conserve our timber and only cut what is actually required for immediate use. We force the output, and this continuous forcing process forces down the prices, forces us to leave timber in the woods because we cannot get costs out of it, and we are still destroying and burning up our assets. But here we are in a subject too deep, or it has been at least so far, for the combined strength of the lumberman to handle. There is only one way we can see, and that would be for the government to authorize the lumbermen to combine to stop the ruthless waste.

The Real Problems of To-day

But to come down from our airship to the real things we have to deal with to-day—our inspection rules, prices, market conditions—what are we to do now?

Right here I will read you two letters I have received and the results from tests made so far as they were reported to me:

"Your letter of the 27th, in reference to relative value of the 'Select Grade.' We are of the opinion that in taking this select grade out of the No. 1 common in basswood, birch, and maple it would take out about 25 per cent. in maple. Taking the Oct. 1 list as a base, we think it would be satisfactory to have a spread of \$6 in the grades of FAS and select and \$5 in select and No. 1 common, with the No. 2 remaining as it is, but with the choice No. 3 developing in shipping No. 2 stock bringing \$3 a thousand more than the regular 4/4 No. 3 price. For basswood we would apply this advance of \$3 also in 5/4 and 6/4, but in 8/4 and thicker stock would make this choice No. 3 \$10 a thousand less than the choice No. 2 common. In birch, make 4/4 FAS \$50, selects \$40, No. 1 common \$35, and No. 2 common \$25, with this ratio of price prevailing in all thicknesses. With the 4/4, 5/4, 6/4, 7/4, and 8/4 No. 3A developing in shipping No. 2 common and better \$3 a thousand more should be obtained than for the straight No. 3 common price. With the choice No. 3 common developing in 10/4 and thicker \$30 a thousand less should be obtained than for the No. 2 common.

"In regard to maple, we think that our list is a little bit confusing, but suggest the following under 4/4: First price only FAS and select No. 1 common, 5 inches and wider, 6 feet and longer, making these prices \$49 and \$41. Then under 4/4 flooring stock have the four grades selects, No. 1, No. 2, and No. 3A, with the prices \$39, \$31, \$26, and \$18 a thousand respectively. With 5/4 and thicker stock selects should be \$7 a thousand less than FAS and \$7 a thousand more than No. 1 common. With the No. 3A developing in 5/4, 6/4, and 8/4 No. 2 common and better the price should be \$3 over the regular No. 3 common price, and with the same stock developing in 10/4 and thicker \$30 a thousand less should be obtained than for the No. 2 common. In shipping flooring stock from all this Northern country anywhere from 1½ per cent. to 3 per cent. of FAS develops; also 6 per cent. to 12 per cent. of No. 3 common. We think by making a definite distinction between 4/4 No. 1 common and better and 4/4 flooring stock it simplifies matters. We think the grade of selects is very necessary, as we know that in shipping out good lumber with a National man on the pile he invariably gives us the worst of it on stuff between No. 1 common and

* Paper read before the Northern Lumbermen's Salesmanship Congress, held at Bay City, Mich., November 19-17.

FAS. This would take care of this and also tend to make our grades more uniform.

"We trust this is along the line of suggestion you are looking for."

Letter No. 2

"I am pleased to acknowledge receipt of your communication of Oct. 27, and note that you are going to discuss the subject of 'The Select Grade of Hardwood and Its Relative Value' at the Northern Lumbermen's Salesmanship Congress, and, while from the fact that it is just recently that we started to put up some of this grade in the yard, I am possibly not in a very good position to give you much information. I would state, as far as we have gone, we have found that it cannot help but result to our advantage.

"The ordinary grade of No. 1 common as we have been previously putting it out would probably produce of this new grade all the way from 25 to 40 per cent.; also the grade of No. 2 common would possibly develop from 10 to 15 per cent. And when you can get a relative increase in value of from \$10 to \$20 a thousand, there is no question, of course, as to the ultimate benefit. And bear in mind at the same time it is our opinion that we cannot see that the selection is particularly detrimental to the No. 1 or No. 2 grade—that is, for the ordinary purpose of a cutting-up nature for which these grades are sold.

"In our own particular case here we are simply experimenting on the 4/4-inch thick stock and in birch only. Cutting only small quantities of basswood and maple, we have not decided to experiment on these woods as yet. Of course, there is another feature in connection with this grade, and that is that it is practically a sash, door, or interior trim produce, and, naturally, as there has been very little business with this class of trade for the last eight or ten months we are not any of us in a position to determine just how the consumer is going to take to the stock, and especially with reference to the price he will pay for it.

"I am very sorry indeed that I am not a little better posted on the subject, but trust that such references as I have made will at least result in some line of thought to you."

Actual Tests Reported

Actual tests so far as reported show as follows:

Old rules:

872 ft. 6/4 FAS maple.
11,441 ft. 6/4 No. common.
2,976 ft. 6/4 No. 2 common.
15,289 ft. total.
12,243 ft. 4/4 No. 1 common maple.
7,681 ft. 4/4 No. 2 common maple.
2,236 ft. 4/4 No. 3 common maple.

22,160 ft. total.
17,034 ft. 4/4 No. 1 common maple.
4,596 ft. 4/4 No. 2 common maple.
471 ft. 4/4 good face No. 3.
558 ft. 4/4 regular No. 3 common.

22,659 ft. total.

New rules:

867 ft. 6/4 FAS No. 1 common, 35 1/3 per cent. selects.
4,145 ft. 6/4 selects No. 2 common, 3 4/10 per cent. selects.
7,277 ft. 6/4 No. 1 common.
2,870 ft. 6/4 No. 2 common.
15,159 ft. total.
4,129 ft. 4/4 selects No. 1 common, 33.4 per cent. selects.
8,239 ft. 4/4 No. 1 common, No. 2 common, 0.2 per cent. selects.
7,663 ft. 4/4 No. 2 common.
2,233 ft. 4/4 No. 3 common.

22,264 ft. total.

3,567 ft. selects No. 1 common 20.3 per cent. selects.
13,567 ft. No. 1 common, No. 2 common, 0.2 per cent. selects.
4,496 ft. 4/4 No. 2.
471 ft. good face No. 3.
558 ft. 4/4 No. 3 common.

22,659 ft. total.

Average of above, 28.5 per cent. of No. 1 common grades selects.

Average of above, 1.4 per cent. of No. 2 common grades selects.

The last test was not a fair average, as some of the best common had been put with FAS. We think that in inch maple about 30 per cent. of the common will grade selects. As you will note the test on 6/4 shows over 38 per cent. We believe you will find that in 2 and 3-inch this percentage will be much larger. We believe the consumer, when he becomes familiar with the select grade, will find that for all practical purposes the select grade will be equal to seconds, but it may take a little time to get this established.

As to price, it has been suggested that in all woods except birch the selects should be at a price half way between FAS and No. 1 common and the No. 1 common left where it is. In birch there is a \$15 spread between the FAS and No. 1 common, and if the selects were priced at \$5 less than FAS and the No. 1 common at about \$2 less than at present there would then be \$12 difference in the price of the grades. When the market on birch picks up again to correspond to the demand for other hardwoods that difference would be too great.

The high price of FAS will stimulate the demand for No. 1 common and we believe this matter of inspection and prices will adjust itself in a short time. Personally, I would approve the suggestion to put a price on selects at \$5 less than FAS or perhaps split the difference between FAS and No. 1 common, but leave the No. 1 common where it is.

There is no question in my mind about the practical usefulness of this grade. It will take a little time to adjust it, and for both producers and consumers to become accustomed to use it, but it will be the pilot for good face inspection in the not distant future. And that is what we ought to have in the hardwoods.

In discussing this subject of grades, market conditions, and the sale of lumber we must not lose sight of the very important part played by the Michigan and Wisconsin hardwood associations. Lumbermen were about as suspicious of each other in years gone by as were the farmers of each other. If anything, the farmers beat us to it in the matter of co-operation. Several attempts were made to organize a state association before one was firmly established. Time has demonstrated the value of the associations and individual co-operation has become more steadfast and conscientious.

And now comes the finest result of all this association work, the breaking down of suspicion and the establishment of open-handed, hearty co-operation between the Michigan and Wisconsin associations. No longer is Lake Michigan a dividing line. When the Allies of the North, understanding each other and with faith in each other, march forth to capture business, no trade conditions can stop them.

Constructive Co-operation

At the Northern Lumbermen's Salesmanship Congress, at Bay City, Mich., Mr. C. R. Abbott, of Cadillac, Mich., speaking of co-operative methods in Cadillac, said:

"With the change of operation from pine to hardwood new conditions were confronted, and the various timber owners of Cadillac, in their endeavor to make it profitable to themselves and to the city and surrounding territory, realized they were handling a commodity which required a great deal more time, attention, and the application of more scientific methods than did their former operations in pine.

"A difficult problem confronted these men, and after careful consideration of the best methods to pursue, co-operation with their friends, their neighbors, their competitors, their employees, and with everyone with whom they had business dealings, seemed to be the stepping-stone of the road to success. This condition has existed in the manufacturing industries of Cadillac in not only the lumbering industry, but all other industries since the passing of the pine operation. As a matter of fact, this same co-operation existed long before that time, but it was not so pronounced as since the advent of the hardwood manufacturer. In the co-operation by the various manufacturers at Cadillac, speaking particularly of the lumber industry, of which there are at this time six large producers, all of whom are competitors, we find the closest of co-operation along all lines. Our exchange of information is openly and freely given. Our manufacturing methods are gladly exchanged at any and all times. Our co-operation is along the line of first endeavoring to produce the best quality of everything; that is why we use for our slogan, 'The City of Quality.'

"We freely consult our neighbors, giving such information as we have; in fact, our problems are worked out with our competitors, and it has proven mutually profitable. Do not understand me to say that we all do the same thing in the same way.

"To produce our lumber economically we have found it necessary to utilize our waste materials in some manner as a by-product, and the production of chemicals was our choice. All of our waste wood, fuel, etc., being used in the chemical plants, enables us to log our stumpage more closely—in fact, we take everything on the land.

"One firm first installed a chemical plant, and later, when another of our firms decided to go into the chemical business, co-operation again came to the surface, with the result that it was found additional chemical plant installations would require the building and operation of a charcoal pig iron furnace to complete the unit. The additional chemical plants were built, as well as the iron furnace. It has been said of Cadillac manufacturers of lumber that they ask higher prices than some of their competitors. To this we cannot agree. The people who buy our stock would not pay us a premium just for the sake of doing business with us. We desire to give to our customers just what they want, and when they can get just what they want they are willing to pay our price.

Abitibi District Short of Cars

The question of car shortage in the Abitibi district was discussed at the last meeting of the Council of the Montreal Board of Trade. The Abitibi Chamber of Commerce requested Montreal support to a demand that the Transcontinental Railway place 12,000 cars at the disposal of Abitibi lumber merchants at the rate of 1,500 per month until September, 1918, for the reason that the sale of the output of wood in that district is indispensable to the subsistence of settlers who reached there previous to the start of the war, and that the shortage of transportation facilities will be a financial disaster to commerce in that region.

The council, while sympathetic as to the need for cars in the Abitibi district, felt that this shortage is universal on this continent. The movement of woodpulp, pulpwood, paper, lumber and hay from the Ottawa and Quebec sections, in which many members of the Montreal board are interested, is also greatly restricted for the same reason. This shortage is owing to the fact that Canadian railways are not receiving their cars back from the United States, official railway reports showing that there are about 20,000 Canadian cars on United States lines which the Canadian railway companies are so far unable to get back, and if the Canadian railways endeavored to meet such requests as that of the Abitibi Chamber of Commerce, it would only be a matter of a few weeks before Canadian railways would not have sufficient equipment on their rails to handle Canadian traffic.

Purchase of Millwork

By D. R. FitzRoy

Not long ago a large packing industry started a refrigerating plant in a town where we have a yard, submitting their material lists to our yard manager and our competitor. The list was referred to our St. Louis office and I incidentally learned that two St. Louis lumber companies were figuring the bill. Trying to keep the bill at home, I used southern mill prices, added \$1.50 a thousand feet for unloading and delivering to building site, and lost the bill. You all know how we felt over this loss. Our prospective customer had gone to the big city to buy because he was buying in carload lots instead of wagon lots and we could only expect to sell the tag ends.

Now we are all much alike, and you can realize that Mr. Sash and Door Man experiences this same feeling when you buy a carload of doors from the coast, at a temporary saving of a few dollars, when he has served you day in and day out, sometimes on orders so small there could be no profit, and has every right to expect any quantity business you can offer. You are at such times buying from his source of supply in competition with him. Buy at home, all you can all the time.

The retail lumberman in close touch with his sash and door house can command and is cheerfully given efficient service when a millwork job is in sight and a poacher by mail offering to gather it in. The sash and door house will more than meet you half way in your effort to make or retain a satisfied customer.

Not infrequently a good sized building will be started in your town and an architect with decided ideas of favoring his contractors and supply men in his own home town gets the job to superintend. You ask for a set of plans because you intend to bid on the lumber and millwork, and Mr. Architect puts you off with some excuse. Here is where Mr. Sash and Door Man comes in. You send for help and his estimator goes right to the architect's office, figures the work, and you and he then hand in the millwork bid when the bid opening is had. This allows no chance for juggling and your sash and door representative is right there to help you handle the situation as to details.

Let me caution you always to compare items on several bids covering a millwork bill of material. On a fair sized job a bid will contain several sheets, and the last, the one with the total dollars and cents is the last page for you to consider. Compare items, check the exceptions and avoid the pitfalls that consideration of price alone may bring you to. The lowest stated price may not be low if glazing is omitted in the bid, or if stairwork is omitted, and contained in competing bids. A little care at the beginning will save disputes and unpleasantness at the end. Remember we all make mistakes, and a bid covers only what items it specifies.

Whenever the lumberman can get the opportunity he should see that the architect or contractor calls for stock sizes for all items possible, not only for the saving to the owner, but stock items are better made and there is an endless variety of stock to choose from. Besides quality and the saving in price, it saves time. Quality in particular is gained where veneered work is concerned, the stock items being far superior.

Courtesy to your sash and door connections is most essential. If you think a sash and door house has "shipped in" on you, do not write them a hot letter right off the bat. Take your time; write a nice courteous letter. Say "you understand" they have done so and so, and that you feel they must have some explanation to make or facts

to disclose of which you are unaware, and so forth. This will undoubtedly bring you a reply that will satisfy you on the particular shipment and save you from future trouble.

U. S. May Build 100,000 Cars

The United States Railroad War Board is considering a proposition to build 100,000 freight cars and sell them to the railroads of the country on twenty-year time, at 4 per cent. interest. Howard Elliott, a member of the board, made this announcement at a hearing before George W. Anderson, of the Interstate Commerce Commission, on the petition of the New England railroads for increased rates. Mr. Elliott expressed his approval of the plan, but said he was opposed to the government loaning money to the roads outright. He expressed the opinion that, without financial relief, the roads would be unable to accomplish the maximum amount of work for the government in the present emergency.

Consumers Cordage Company Handling all Orders

The Consumers Cordage Company, Limited, Montreal, report that their Dartmouth plant was considerably damaged in the Halifax explosion. Many of the employees were injured, fortunately none fatally. Mr. R. L. Graham, manager, however, was badly bruised and cut about the face. The company is at work on the necessary repairs, and will soon have everything in normal shape. All orders on hand and any new business will receive prompt attention. Orders which the Dartmouth plant cannot handle will be rushed forward from the company's Montreal factory.

1918 Calendars

The Fassett Lumber Company, Limited, lumber manufacturers and wholesalers, Fassett, P.Q., have as usual selected a very attractive picture calendar as a souvenir to send to their friends in the trade at the New Year. This year's selection is a beautiful picture entitled "When Daddy's Ship Comes Home," and represents a Dutch peasant family group sitting near a cottage table. The picture is attractive both for its delightful coloring and the simplicity of its design.

J. Geo. Chalifour, Québec, P.Q., has sent out an attractive calendar to his friends in the trade. The calendar contains a large colored picture entitled "Ramona," which represents a moonlight scene on a Canadian river, the foreground being occupied by an Indian maiden in a canoe.

The Waterous Engine Works Company, Limited, Brantford, Ont., are sending out a large wall calendar to their trade friends. As usual the company have selected a calendar notable particularly for its utility, being one which contains the dates in large type, and is therefore specially suitable for offices.

A handsome calendar is being sent out by the River Ouelle Pulp and Lumber Company, St. Pacome, P.Q. The calendar is a large one, containing a very attractive reproduction of a colored painting, the subject of which is "The Silent Places." The picture is by the well-known artist Philip R. Goodwin, who has made a special study of lumbering and forest scenes. It represents a couple of timber cruisers about to take to a canoe and chase a moose, the head of which appears in the water in the distance. The calendar pad attached is a large one with figures in handsome bold type.

B. C. Timber Receipts Increased

According to a report prepared by the Forest Branch of the Department of Lands of British Columbia, covering the cut of timber during the year 1916, the receipts of the department in respect of lumber sales amounted to \$15,012,050, as compared with \$9,307,408 during 1915. The quantity of timber cut in the province was 1,280,263,000 feet in 1916, as compared with 1,017,683,000 in 1915. The quantity of lumber sold in 1916 was 1,010,427,819 feet, as compared with 747,096,710 feet in 1915. The average wholesale selling price throughout the province in 1916 is given as \$14.86 per thousand feet, as compared with \$12.46 during 1915.

The New York Times Company has purchased from the North American Pulp and Paper Company and J. E. A. Dubuc, of Chicoutimi, P.Q., the Tidewater Paper Company's mills, located at the Bush Terminal, Brooklyn, N.Y. The annual output of the mills is 30,000 tons of news print paper. The purchase takes effect on January 1.

A despatch from Victoria, B.C., states that engineers in the lumber mills of Vancouver Island are asking that their working day be reduced from ten hours to eight hours and that their wage scale be adjusted and double time allowed for overtime.

What Practical Use Does the Engineer Make of His Theoretical Training?

By C. R. Pope*

Before referring directly to the question of this topic, I will review briefly some general facts, relative to logging engineering and university training, which are essential to a fair analysis of results.

Let us remember in the first place that logging engineering as a distinct branch of science has been in existence only a short time. It was named and first defined at the second session of this Congress, I believe. It was another year or two before any of the schools or universities had classes established designed directly for teaching this science. Most logging engineering courses have been established as a branch of the forestry schools of various institutions. Schools of forestry have been in existence in the West approximately ten years, and some longer in a few Eastern universities. The courses offered, however, were in technical forestry, designed primarily to fit men for scientific forestry work, practiced in this country practically only by the National Government. While the courses included instruction in logging methods, milling, cruising, scaling, surveying and mapping, they were taught more with reference to their bearing on scientific forestry than with a view of fitting men for practical loggers as the logging-courses recently established aim to do. A few graduates from the forestry courses have gone into the logging industry, but the greater majority into forestry work. The point I wish to emphasize is: that there is a distinct difference between a forestry course and a logging engineering course. They are, in most instances, given in forestry departments, and by those who have not followed their developments closely are apt to become confused. As a matter of fact, there are very few yet who have completed training in logging engineering as a specialized course, most of those now in practical work having had only the logging engineering given in connection with, or as a part of, the forestry courses. So it is yet a little early to take an inventory of results to determine to just what extent the logging engineer is making practical use of his school training. Some of us, however, who have had a partial training in this particular line of science and since came into contact with the practical end of the work, may be able to draw some conclusions.

To begin with we must take into account the basic training which precedes the specialized part of the course. For in logging engineering, as in all other specialized courses, a certain amount of training in arts and sciences, including language, history, mathematics and the various science courses, is always a pre-requirement to the specialization. It goes without saying that this training is highly beneficial and more or less directly applicable in any line of work. So up to that point we will offer no criticism. Of course, the specialization does not begin all at once, for the student is brought more or less in contact with, and has some training bearing directly upon the work which is his ultimate aim, from the beginning. But we are more particularly concerned with the specialized portions of the course, and what it is doing to make practical loggers.

Woodrow Wilson, while president of Princeton University, commenting on the value of a college education, said in effect: "That the average value of young men to the commercial world at the time of their graduation was less than two dollars per day. But that the greatest value of the training was in the possibilities it created within these men." That statement has always impressed me and is, I believe, pretty true to facts. While I think we may safely expect a little higher average value from our logging engineers at the completion of their course, yet it is my belief that their greatest value lies in the possibilities this training has created within them. The course gives them a general insight into the industry, not in one camp or locality, but in all localities. It gives them a general understanding of all the different machines and methods used and the conditions each are best adapted to. Some may say that such information will just as readily be acquired on the job, but you, as operators, who have an opportunity to mingle with each other, and who have had years of practical experience in which to gain this knowledge

and information, must realize that a young fellow just starting in does not have the opportunity. If he is to make good he must stick pretty close to one place, and I feel no hesitation in saying that the insight and information regarding the industry as a whole is much more comprehensive than could be gained on the job in the same length of time. And I am further convinced that the young man who will make good on the job without this training, will make good a whole lot quicker and stronger with the training. Logging cannot be taught from text books or word of mouth. But there is a great deal in connection with the operation that can thus be taught. Take the civil engineering work proper, which has become a recognized necessity of practically every operation. That requires a technical knowledge which can be gained only by study and instruction, one or both. This is taught in logging engineering courses applied to logging, as has been determined by experience. So the student logger gets not only this technical knowledge but also the benefit of others' experience, and while he may not make use of all the training acquired along this line he does make practical use of much of it. While this civil engineering, as applied to logging, is the primary work of the logging engineer, it is a mistake to confine him to such narrow bounds. He has technical knowledge which is a valuable asset in other phases of the work, including business and economic training, elementary law and mechanical engineering. While not specialized in these subjects, a general course in them is doubtless of practical benefit to the logging engineer. Last, but not least, he learns how and where to get information which better equips him to work out his salvation on the job.

To the logging engineer who has not yet taken his place in the field of actual practice, I would not leave the impression that taking a course in logging engineering will make of you a logger or a logging engineer. It will be of great benefit to you, but a lot of practice is necessary to complete the job. To refer again to my former quotation "it has created within you a possibility" which gives you a great advantage if you will go out on the job and follow it up with perseverance and determination. And in this connection also I would advocate the maximum of practical work in connection with the theoretical, for it is absolutely essential and the more of it acquired during the course the nearer the student is to being a logging engineer at the completion of the course. I heartily agree in this respect with the course outlined by Mr. Van Orsdel at last year's Congress. I believe that if the courses required one-third of the time spent in actual work it would eliminate those taking up the work who are not adapted to it, the department would have a fuller confidence in the men sent out and operators would have a little confidence in them also.

Food Conservation in Logging Camps

By W. B. W. Armstrong, B. C. Loggers Association, Vancouver, B. C.

It must be admitted that there is a great waste of foodstuffs in the camps of British Columbia, just as there is a great waste in lumber camps in every locality where I had an opportunity of observing. I do not refer so much to the waste caused by incompetent cooks, as to the waste caused by serving expensive foods of low food value, instead of staple body-building materials.

There is no class of men in the world which requires better food than the logger. His occupation is of such a strenuous nature that his body consumes large quantities of food, and the fact that his work is done out of doors with the balsam of the forests and the tang of the seas in his nostrils goes far towards making him ravenously hungry. He needs plenty of good food, and he must have it in order to be efficient, but of late years the selection of his food has been wrong in theory and wasteful in practice.

This condition has been brought about very largely by logging operators attempting to attract men to their camps by reason of the luxury of their tables. This has produced a species of competition in this regard, until now the foods served in our logging camps are more expensive and more varied than those used in our own homes or in the average hotel.

This condition has also evolved a new type of camp cook—one

* Logging Supt. of North Western Lumber Co.—An address delivered before the Pacific Logging Congress.

whose working tools consist largely of a white apron and a canopener. The toothsome pork and beans is only a memory, although the present-day cook with all his modern materials and his expensive outfit can produce nothing to compare with pork and beans as they were cooked in the camps 25 years ago.

In my opinion the greatest waste of today is that occasioned by the general and lavish use of canned fruits and vegetables. This waste occurs all along the line as follows:

1. The labor cost of canning fruits or vegetables is greater than that of drying or evaporating.
2. The heavy syrup in which fruits are put up is very expensive—and this class of canned fruit is used almost exclusively in our camps.
3. The transportation charges on canned foods are very much in excess of those on evaporated goods.
4. The material of which the containers are made is expensive and scarce, and is, moreover, very necessary for the conduct of the war.
5. I believe it has been demonstrated that the food values of evaporated fruits are equal, if not superior, to those of the same material put up in heavy syrup, and I have demonstrated in my own home that they are equally palatable and refreshing when properly prepared.

Notwithstanding these facts—and I believe they are facts—it is quite impossible for any logging camp operator to change his present wasteful method of provisioning his camps, so long as the competition of which I have spoken continues to exist. If the logging operators of our respective countries would get together and evolve a standard list of practical, palatable, body-building foods, and could have this standard list generally adopted, or if legislation could be promoted which would, during the continuance of the war, enforce such standardization, we would save ourselves and our country—yes, and our men—a vast sum of money and a tremendous amount of valuable material which is now virtually thrown away, and that without a particle of inconvenience or hardship to anyone.

Let the list be a liberal one. Let us give our men good food and plenty of it, and let us see that it is properly prepared in a sanitary kitchen and properly served in a clean and bright diningroom, but let us cut down the tremendous waste which now prevails, and above all things let us "CAN" the CANS.

Food Control for Lumber Camps

Hon. W. J. Hanna Considering Means of Reducing Waste—No Regulations Proposed at Present

The Canadian Food Controller is considering the problem of reducing food waste in lumber camps and has addressed to the Board of Trade of Toronto a letter asking for their co-operation. The letter refers to what is being done by the Pacific Logging Congress, and says, "This is a very desirable thing, not only from the point of view of the food controller, but also for the companies concerned and the men who eat in the cook-house." The food controller suggests no regulations, but that a pamphlet on the subject should be published. In reference to the Pacific Logging Congress the food controller's letter encloses the following comment:—

At the recent Pacific Logging Congress much attention was paid to the timely subject of conservation in lumber-camp cookhouses. The logger and lumberman require hearty food for their heavy outdoor work, and for years in the Northwest liberal feeding has been a means of attracting and holding good workers under difficulties of labor scarcity. This has led to extravagant tendencies, and now, with food saving in view, there is a necessity for economy. Good organization of the cookhouses is essential. If one hundred men are fed in a plant designed for only half that many, much food is thrown away as an incident to hasty service, and also lack of storage space for "leftovers," which might be used in the next meal. Evaporated fruits and vegetables are more economical than canned goods, not only in price but in the saving on freight and hauling. Too many dishes are placed on the table at one time in some camps, especially canned fruits, and it has been found that men are better satisfied with fewer dishes, that there is less waste, and that it is easier for the cook to prepare attractive menus, give quick service, and also greater variety in menus from day to day. As the planning of menus is left largely to cooks, it was suggested that economy might be secured by furnishing the latter with typical menus drawn up by domestic science experts to give adequate nutrition and appetizing variety. These standard schedules would also facilitate figuring out the quantities of food required per man per meal and aid in economical buying. The congress indorsed the United States Food Administration and appointed a committee of six members to supervise food conservation in the lumber camps of the Northwest.

Eight pigs, averaging 52 pounds each, were selected for a garbage feeding test at the Iowa Experiment Station by Prof. John M. Evvard, of whom the Breeder's Gazette says that, "whenever a prob-

lem of swine-feeding arises, he goes out and puts the question to the pig." The test was planned in anticipation of the garbage disposal problem at our army cantonments. These animals were offered an average of 23.6 pounds of garbage daily, and consumed 19.6 pounds, which they converted into 0.96 of a pound of live pork. They did this for 70 days, averaging 120 pounds on August 28. Then they were divided into two groups for the next 30 days, one group receiving garbage as before, while the others were self-fed all the wheat middlings they wanted in addition to the garbage. The animals on middlings consumed the grain, eating less garbage, but made no better gains than the pigs on straight garbage, leading to the conclusion that grain should be fed—preferably corn—only when there is not enough garbage to go around. Garbage is not difficult to feed if pens and troughs are kept scrupulously clean. With hogs at \$20 per hundredweight, the garbage from a kitchen serving 100 persons would be worth \$1.15 for the first 70 days of pig feeding, and 83 cents for the next 30 days. Twenty-cent hogs will pay nearly a cent a pound for garbage, and the kitchen refuse from a single big cantonment will make 750,000 pounds of pork in a season. These results have been given to farmers and others who have taken garbage contracts.

Some Causes of 1917 Timber Losses

As fire protection systems become more thorough it will be possible to learn more accurately the causes of the annual series of forest fires. Already the gathering of data is fairly thorough in many sections of the country, but, taking Canada's forest areas as a whole, it is impossible at the present time to compile statistics of fire loss of more than approximate reliability, or with more than a partial listing of the causes. The ascertaining of causes is of the highest importance in fixing responsibility and directing educational efforts towards prevention.

The Canadian Forestry Journal presents the following statistical record of British Columbia's 1917 forest fire experience, the figures of which, while not final, are approximately correct:

Total fires in province during 1917	930
Fires upon which extra help was employed	345
Total area burned over, acres	211,455
Area of merchantable timber damaged, acres	89,000
Amount of merchantable timber damaged, ft. b. m.	213,360,000
Amount of merchantable timber salvable, ft. b. m.	38,933,000

Losses in:	
Merchantable timber	\$178,401
Valuable reproduction	6,563
Standing timber on old burns and cut-over lands	125
Damage to stock range	6,075
Forest products, buildings, railway and logging equipment, etc.	182,004

Total losses	\$373,168
Lives lost fire-fighting	8
Horses lost (in one fire)	11
Prosecutions for infringement of provisions of fire law	8
Convictions	6
Cases dismissed	2

Local reports and the statements of some of the district foresters assign definite origins for some of the worst conflagrations as follows:

Spruce Valley fire: Dropping lighted tobacco on the floor of a tent; also the presence of a heavy lumbering slash.

Kalamalka Lake fire: An unextinguished camp fire left by a fishing party.

Crow's Nest Valley fire: Heavy debris in neighborhood of mill, which caught from flying sparks.

In the territory of the St. Maurice Forest Protective Association, Quebec (about 12,000 square miles), 217 fires occurred in 1917, of which no fewer than 122 were set by railway locomotives. Mr. Henry Sorgius, the manager, gives the following origins:

Railways	122
Sectionmen	4
Unknown	38
La Loutre Dam construction	26
Drivers	5
Construction men	8
Fishermen	8
Settlers	4
Jobbers	2

Total	217
-------------	-----

It will be noted that the settler, recently the most prolific source of forest damage, has dropped to second to last place in the list. This is a fine tribute, indeed, to the success in applying the "permit law" for the setting out of land-clearing fires. While the St. Maurice asso-

ciation commenced its career with a number of prosecutions and convictions of settlers for causing fires (and these, doubtless, were salutary), it has directed its main effort towards winning the good-will and co-operation of the settler, and has been eminently successful.

The fire losses on the St. Maurice Association's territory this year have been kept down to a very gratifying point.

Of merchantable timber the loss was 287 acres; young growth, 216 acres; cut-over lands, 2,272 acres; old burn, 1,592 acres. Total, 4,367 acres, or a little less than 61 square miles.

Protection of Timber Investments

Fire Prevention, Economical Cutting and Reforestation Essential for Preserving the Forest

"Canadian Timber Investments" was the subject of an address by Mr. Ellwood Wilson, chief forester of the Laurentide Company, at a meeting of bankers and others interested in finance, held at the Board of Trade, Montreal, recently. The address was illustrated by a number of slides shown by Mr. Robson Black, secretary of the Canadian Forestry Association, who briefly explained their significance in connection with fire protection.

Mr. E. L. Pease, President of the Bankers' Association, presided, and pointed out that the banks of Canada had had costly experience in making advances against timber land. He promised the co-operation of the Association in any plan for conserving our forests.

Mr. Wilson, after speaking of the importance of the lumber and pulp and paper industries from the financial point of view, remarked that the supply of timber was not inexhaustible. They were cutting and burning at present more than the annual growth in every province except British Columbia. Oak had practically disappeared from the markets, white pine was rapidly following, and spruce would be the next to go. It was necessary that a practical and rational policy be adopted immediately. Mr. Wilson then referred to the fact that lumber was absolutely essential for offence and defence in war, and in alluding to the light railways, timber for which was furnished by our Forestry Corps in Flanders, stated that Col. J. B. White had told him that when operations were commenced the timber simply sank out of sight. This difficulty was overcome by sawing the timber into planks and laying them side by side so that the railway line formed almost a floating line. We must have timber supplies for the future, continued the speaker, and must get together the men who know about these matters, the men who are financing the dependent industries and the men who are operating, and we must work out a general policy and see that proper legislation is enacted to put the policy in force.

This country was dependent upon the United States for coal, and in view of this it was important that Canada should see that it had a sufficient supply of wood, not to replace coal, but to supplement it, especially in view of any difficulties that might arise. Ordinary fire wood was now fetching \$8 a cord in Grand'Mere and \$12 in Sherbrooke. A proper policy would naturally entail higher costs for raw material, which must be met by increased cost of product to the consumer, and the public must be educated to their responsibility in the matter. The speaker then referred to the policy adopted by the Government in limiting the price of paper, to a point where a fair margin of profit could not be realized. A producer must make a profit to live, and if manufacturers were going to economise they would begin by cutting off those expenditures for fire protection and reforestation which they had voluntarily assumed for the good of the public and posterity, more than for their own selfish interests. The present Government practice in price regulation was putting a premium on waste and destruction.

It was necessary to ascertain roughly their stock, then how fast it was growing year by year, and also the amounts which could be predicted for the lands which had been burned and cut over. Then it could be ascertained how long the present stock would last, and how much must be planted each year to provide for future needs. What was needed was a public sentiment which would back up our governments to spend the necessary money, which, considering the value of the work, was relatively small.

Millions of dollars had been spent for mills which did not even have accurate maps of the lands from which they drew their supplies. Mr. Wilson mentioned two cases of lack of data which came under his personal observation. A cruiser reported a plentiful supply of timber on one of the rivers, and a year or so later foresters were sent over the same territory and found that there was only a fringe of timber along the river and that the country behind was practically all burnt clean. In another instance a large block of limits was bought, having been reported as only very little burnt, and a good stand of timber remaining. When a detailed cruise was made 97 per cent. of the territory was found to be burnt, and had only a very slight reproduction. A cruiser was sometimes expected to cover hundreds of

square miles of country in a few weeks, and naturally could not go over the country in detail. The work of cruising should be done by trained and experienced men. This cost money but was worth while.

Mr. Wilson stated that the improvement of fire protection methods had brought into existence a reliable timberlands insurance company in the United States, which would insure lands having adequate fire protection, at a very reasonable rate, but would not consider lands not so protected. One of the advantages of reforestation was that instead of having to drive wood from 150 to 200 miles, it could be grown within five to thirty miles of the mills, and taken by logging railroads from the stump to the mill without the necessity of tying up money in huge storage piles for the winter. Instead of cutting on an average of, say, six cords to the acre, plantations should yield 40 to 70 cords, depending upon the age of the trees. Many concerns were carrying limits on their books as an asset, which were practically valueless, and more were an annual loss because ground rents and fire protection had to be paid for. The timber owner should replant each year the amount that he cuts, just as he would replace worn out machinery or plant.

The Preservation of Ship Timbers

Before the days of iron and steel vessels, the merchant marine of the United States led the world. This was due not only to the superior skill and daring of American sailors, but also to the great abundance of shipbuilding material in the boundless forests of the New England states. With the coming of steel construction, in the latter part of the last century, and the hampering effect of unwise legislation, the construction of wooden vessels lagged, and the use of wood soon became limited to the construction of the smaller bottoms, such as fishing schooners, yachts, tugs and scows. In this modern day, however, the ruthlessness of the Hun has again brought wood as a shipbuilding material to the fore, and the success of the allies in this great struggle bids fair to hinge largely upon the speed with which wooden hulls can be turned out by American shipyards.

Though present activities in wooden shipbuilding are distinctly to be considered as necessary war measures, the wooden ship of today is vastly superior to the relatively short-lived hull of the past. It has become possible to build wooden hulls that may confidently be expected to give efficient service for at least twenty to thirty-five years. In former years the only attempt made to secure proper wooden material consisted in grading the timber to eliminate members containing rotten spots and a superabundance of knots. All other material was considered to be satisfactory. Modern researches have established the fact, however, that the strength and durability of wood is very directly proportional to the density of the wood, and in the practical application of this information in the selection of ship timbers, hulls now in the process of erection may be expected to give good service for a much longer period of years than if the old methods of construction were followed.

The use of the "density rule" is of primary importance to the grading of the southern yellow pines. White longleaf pine is a very durable wood, probably almost as durable as Douglas fir, shortleaf pine and loblolly pine are inferior woods from this standpoint. As it happens, longleaf pine usually produces the densest wood, and for this reason the selection of only dense yellow pine will insure the use of suitable yellow pine material. Structurally these three woods are so similar that a trained wood technologist cannot positively distinguish between them.

In the case of Douglas fir the application of the "density rule" is of lesser importance, simply because the average Douglas fir timbers normally exhibit sufficient density. It is of value, however, in that the occasional low density timbers that would give trouble through premature decay are definitely ruled out.

The rapid decay of untreated wooden vessels has been a matter of concern to shipbuilders for centuries. The early Portuguese attempted to prevent the decay of frames and other timbering by packing the spaces between the frames and planking with common salt. While the salt prevented the development of fungi, its hygroscopicity or ability to absorb moisture caused excessive dampness in the lower holds, and the use of salt for this purpose was soon abandoned. Various other abortive attempts were made to increase the durability of wood, but no real advance was made until the latter part of the eighteenth century, when the British Admiralty found that treenails that had been dipped in wood tar creosote gave much superior service. Strangely enough, the painting of the frames and surfaces exposed to decay with creosote apparently did not occur to the navy officials, and the value of brush treatment with creosote did not find proper appreciation. It was found, however, that if the timbers entering into the framing of vessels were air dried and painted with crude oil or petroleum wherever one timber came into contact with another, or where moisture was likely to collect, the life of the timbers was considerably prolonged. This method of treatment has survived to the

present day, and many of the wooden hulls that have been constructed during the past two years have been treated in this manner.

Probably no other industry is so bound by precedent as the wooden shipbuilding industry. This may be largely due to the fact that with the decadence of the industry no young blood has entered this field, and ideas that seemed reasonable decades ago are not readily relinquished by the old shipbuilders who have been called back to their former occupation by the present emergency. When the brush treatment with coal tar creosote of the essential timbers of the new government hulls was first proposed, the older fogeys were scandalized. Why, any old ship carpenter knew that the only proper thing to use was crude petroleum! Science won, however, over the protests of the older men, and the timbers in the new vessels are now given a thorough brush treatment with coal tar creosote.

Several grades of creosote suitable for this purpose are on the market. The so-called "refined" oils are best for the purpose. They are obtained by cooling ordinary coal tar creosote to a temperature of about 80 or 90 degs. F., and filtering the oil to remove the portion that is solid or crystalline at this temperature. The resulting oil is more effective as a wood preservative, as it contains more of the stable high boiling fractions and is not diluted with a large amount of relatively inert naphthalene. In applying creosote to ship timbers the wood should be well dried before the oil is applied.

Wet timbers should never be painted. The creosote should be cold or at a temperature of about 70 degs. when applied. The idea that heating the oil will cause it to penetrate more deeply into the wood is fallacious, especially in the case of Douglas fir. When cold the oil is more viscid, and more can be applied over a given area. Heating the oil simply reduces the amount that is necessary to cover the wood, and as the preservative effect of the oil is quite in proportion to the amount of the oil present, the foolishness of heating the oil becomes apparent.

While locust and eucalyptus are considered to be the most desirable woods for treenails, strength tests made at the University of Washington laboratory of the United States Forest Service, have established the fact that Douglas fir can be used for treenails in many parts of a vessel with no sacrifice in strength. Such treenails are, however, given a thorough dipping in refined coal tar creosote before they are used.

The use of the various so-called carbolineums and patented wood preservatives has been proposed, but experiments have demonstrated that the fanciful prices asked for such material are not in proportion to the added results that are claimed by the manufacturers, and the writer feels that none of these proprietary preservatives offer any advantages over the liberal use of a good grade of coal tar creosote.

Brush treatments are relatively more effective in the treatment of ship timbers than in the treatment of timbers that are in contact with the soil or which are exposed to the air in such structures as foundations or bridges. Relatively few spores of wood-destroying fungi find their way into the holds of ships, and as the air in the holds of ships is cool and moist, the creosote evaporates only very slowly.

"Canada Lumberman & Woodworker,"

347 Adelaide Street West, Toronto

U. S. Takes Over Railroads

The United States Railroads' War Board, after consultation with representatives of the Interstate Commerce Commission, the Council of National Defence and other government agencies, recently decided to convert all the lines east of Chicago into one centralized system in which cars, trackage and other transportation facilities will be pooled regardless of ownership. The railroads will be operated by a committee of vice-presidents of railroads under direction of the War Board, which is itself composed of railroad heads. This plan has been adopted in order to relieve the congested condition of traffic, to ensure the movement of men, munitions, and war materials generally, and to maintain the industries of the country and the food and coal supply. It is claimed that the real purpose of this plan is to avoid the introduction of government operation and control of the railroads. It is hoped that a showing will be made that will convince the government that government control is unnecessary. The new plan includes the following features:—

Diversion of locomotives, employees and machine tools from Western to Eastern railroads.

Utilization of repair shops on Western lines for repairing Eastern equipment.

Pooling of all tracks and equipment in the East whenever practicable.

Pro rata distribution among Eastern roads of open top cars on a basis of tonnage carrying capacity of the equipment in the pool.

Diversion from congested lines of all freight that can be handled by any open route.

Since the above was received, the United States Government has decided to place all the railroads of the country under government control.

A French View of Canadian Woodsmen

A number of special representatives of French newspapers recently visited the Canadian camps and hospitals in England, and several interesting articles have been appearing in the French press, giving their impressions of what they saw. One of the most interesting articles is by Louis Latapie, of La Liberte. Describing his visit to the training camp at Bexhill, he refers also to Col. Critchley, whom he says has "a splendid soldierly face, breathing faith and enthusiasm, and is an irresistible commander."

"In the immense camps of Witley and Bramshott," he says, "we saw how they trim down the heavy lumberman and touch up the placid townsman. Physical training is pushed to an extraordinary degree of intensity, but it must be pointed out that the material is of marvellous quality. These men have battled from childhood against severe natural conditions and against a rigorous climate."

Referring to the training at Shorncliffe Camp, the writer says: "Between one and two hundred thousand Canadians are thus trained, without ceasing, and constantly kept up to the number in the English camps to be sent over to France after three months of training. The Canadians do everything themselves and make themselves to begin with. They have succeeded in creating one of the most formidable weapons of war. One knows already to what efficacious and glorious use they have put it on the field of honor; our eyes have seen the miracle."

The forestry corps, a section of which was seen at Windsor, greatly interested the visitors, and, after a chat with General MacDougall, the writer remarks: "What a strange country, where they employ a man according to his knowledge and trade! In France we would no doubt have put him to look after the flour mills or in the post-office, and he would be a corporal."

Referring to General MacDougall, the writer says: "General MacDougall is a type of the man of action formed from contact with rude realities. His abundant energy is accompanied with a flow of good humor. Here we have seen the trees of the great Windsor Forest fall as if stricken by the Attila of the woods. Here is a century-old pine whose head reached to the clouds. It is now fallen; the woodsmen armed with grappling hooks seize it, bring it with incredible dexterity to the rolling platform, which, in turn, carries it to the hungry saw. Ten minutes later the proud giant, reduced to planks, is already on its way to the front."

"No need for fear," says the general to me; "there is more wood produced by Nature every year than ever we are able to consume."

"Our reception by the officers in their comfortable log houses in the forest will remain an ineffaceable memory. In this house, which smelt of the forest, these Canadians were in a morsel of their own country."

Mr. Arthur H. Campbell, of the Campbell-McLaurin Lumber Company, Montreal, is a member of the employees' committee of the Province of Quebec Victory War Loan.

WANTED & FOR SALE DEPARTMENT

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line (14 agate lines make one inch.) \$2.10 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word, net. Cash must accompany the order. Minimum charge 50 cents.

Advertisements must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

Wanted-Lumber

White Pine Wanted

Always in the market for good White Pine. Please write us.

The Fisher & Wilson Company,
1-t.f. Cleveland, O.

Basswood Wanted

No. 2 Common and Mill Cull. Winter cut preferred. Apply Firstbrook Brothers, Ltd., Toronto, Ont. 8-t.f.

Wanted

Large size Elm Logs wanted. Address P. O. Box 5, Papineauville, Que. 21-2

Ash and Elm Wanted

One inch Brown Ash and 3 inch Elm, dry or sawn to order. Also buy Birch, Maple, Basswood, Beech. We send inspector.

Wayne Lumber Company,
1-2 44 Whitehall Street,
New York, N. Y.

For Sale-Lumber

FOR SALE—Ten cars Heavy White Oak Ship Timbers for immediate delivery. Apply

Georgian Bay Shipbuilding Co.,
22-1 Midland, Ont.

Lumber For Sale

Two cars 4 x 4 Maple Boxed Hearts.
One car 5 x 5 Maple Boxed Hearts.
One car 6 x 6 Maple Boxed Hearts.
Seven cars Fir Doors.
Three cars Fir Columns.

GEO. C. GOODFELLOW,
Montreal, Que.

For Sale-Machinery

Steel Rails For Sale

A small quantity of 20 lb. light re-laying rails, for sale for immediate delivery. Apply Box 651, Canada Lumberman, Toronto. 23-4

For Sale

Complete set Heading machinery. Can be seen running.

REID BROS.,
24-t.f. Bothwell, Ont.

FOR SALE— $\frac{5}{8}$ in., $\frac{3}{4}$ in., $\frac{7}{8}$ in. diam. wire rope, in lengths from 50 to 200 ft., suitable for guying purposes or for making booms, 4c per foot net in any size or quantity.

H. W. PETRIE, LIMITED,
22-1 Toronto, Ont.

For Sale

Very fine 18 in. and 32 in. x 42 in. Cross Compound "Brown" Engine, approximately 400 h.p., built by Polson Iron Works. Has 44 in. x 16 ft. Belt Pulley. Splendid condition. Immediate delivery. Box 654, Canada Lumberman, Toronto. 24-t.f.

Machinery For Sale

75 h.p. also 100 h.p. engine, heavy log jack and chain, Hamilton 3 block carriage, saw frame, 4 saw trimmer, Berlin No. 94 Planer, 12-in. 4 side Sticker, 30-in. bracket saw, shaper, automatic saw sharpener, Murray lath bolter, Rogers lath machine. Good condition.

VIGARS-SHEAR LUMBER CO.,
24-3 Port Arthur, Ont.

Planing Mill Machinery For Sale

Only in use for 18 months and almost as good as new.

1 Q. Y. Matcher, Gourlay.
1 Butting Saw, Gourlay.
1 Rip Saw, Gourlay.
1 Sticker, Ballantyne.
1 Scroll Saw, Ballantyne.
1 Surface Planer, Gourlay.
1 Heavy Band Resaw, Cowan.
1 Emery Grinder.
1 Large Fan, McEchran.
1 40 H.P. Westinghouse Electric Motor.
Saws, knives, dressing heads, etc., etc.

OTTAWA LUMBER COMPANY,

22 Metcalfe Street,
22-1 Ottawa, Ont.

Wanted-Machinery

Wanted—Circular Slab Resaw, second hand, in good condition.

York & Sunbury Milling Co., Ltd.,
23-2 Fredericton, N.B.

Wanted

Second-hand Inserted Tooth Saw about fifty-six inches, and three head block carriage.

DAVID EIDL,
24-1 Mildmay, Ont.

We are in the market for the following second-hand equipment: Power plant for fifty foot, shoal draft tug boat; double engines preferred; one slab resaw; one double saw, automatic feed; tie mill. Address with full particulars and price,

Reamsbottom & Edwards,
22-1 Connaught Station, Ont.

Machinery Wanted

New or second hand, if good condition:
1 pr. twin circulars—adjustable from 4 to 12".
30 iron rollers—8" or 10" x 20", and boxes.
1 lath outfit complete—not less than 50,000 in 10 hours.
1 smokestack (66 to 72" dia., 100 to 125 ft. long).
1 double drum hoist, complete with connections.
2 small engines 6 to 8 h.p., for tie loaders.
4 friction drives complete (6 to 8" face for conveyors).
1 set log kickers for double deck.
1 friction clutch 75 to 100 h.p.
Also a quantity of sprockets and chains, shafting and boxes.

Canadian Northern Railway System,
Eastern Lands Department,
5 Toronto Street,
1-1 Toronto, Ont.

Wanted-Employment

Advertisements under this heading one cent a word per insertion. Box No. 10 cents extra. Minimum charge 25 cents

YOUNG MAN, six years' experience as stenographer and bookkeeper in lumber business, desires change. Best of references. Box 629, Canada Lumberman, Toronto, Ont. 19-2

Expert stenographer and bookkeeper, married, experienced in lumber financing, collections, etc., both wholesale and retail, desirous of making change. State salary and prospects. Box 656, Canada Lumberman, Toronto. 1-1

Position wanted by man of experience in both wholesale and retail lumber trade. Well acquainted also with the travelling end of the work. Available at once. Can furnish excellent recommendations. Apply Box 642, Canada Lumberman, Toronto, Ont. 22-1

Wanted-Employees

Advertisements under this heading two cents a word per insertion. Minimum charge 50 cents.

First class bookkeeper for lumber and planing mill business. Young married man with thorough knowledge. Commencing at New Year's. State salary and give experience. Box 652, Canada Lumberman, Toronto, Ont. 23-1

WANTED — IMMEDIATELY, GOOD PLANING MILL FOREMAN. State experience, salary expected, and when ready to commence work. Reply Box 657, Canada Lumberman, Toronto. 1-1

Business Chances

FOR SALE

as a Going Concern
Saw Mill and One Hundred
Square Miles Crown
Lands

Mill capable of sawing eight million superficial feet per year. New boilers, good engine and pumps, gang and rotary shingle and lath machines and planer. Railway siding in yard, also water shipping.

This property is situated in a thriving centre where labor is available. Good general store, boarding house and other buildings in connection with property. Good reasons given for selling.

No one need apply, except bona fide purchasers.

Apply, Lumber, Box 643, Canada Lumberman and Woodworker, Toronto, Ont. 22-t.f.

For Sale

About five or six tons of $\frac{5}{8}$ and $\frac{9}{16}$ tested chain in lengths from 27 ft. to 30 ft. with ring on one end and hook on the other end. Address Drawer "F," Sarnia, Ont. 19-t.f.

Jobbers Wanted

We wish to let several contracts to take out logs on Berth No. 6, being broken front lying between the Magnetawan and French Rivers. This berth is all convenient to Canadian Northern Railway.

John Harrison & Sons Company, Limited,
Saw and Planing Mills,
9-t.f. Owen Sound, Ont.

Tide-Water Stumpage For Sale or Exchange

For sale, or will exchange for good ranch or farm land, B. C. Tide-water stumpage, cruised and surveyed.

CARL BLOCK,
19-t.f. Peoria, Illinois.

Mill Plant and Limits For Sale

43 Miles Limits on 31 Mile Lake, Gatineau Valley, containing Basswood, Spruce, Fir, Pine, Cedar, Birch, Maple and Pulpwood.

New Waterous 8 ft. Improved Double Cut Band Mill complete. Steam Alligator, Boats, Sleighs, Wagons, Harness, etc. For further particulars apply to

A. W. STEVENSON,
8-t.f. P. O. Box 2624,
Montreal, Que.

Testing Aeroplane Timbers

Not all the inspection of the timber going into the construction of aeroplanes is to be made at the point of manufacture by any means, and Uncle Sam is taking steps thoroughly to train men in the inspection of all the wooden parts, as well as metal parts, that go into the construction of the machine. At the plant of the Curtiss Aeroplane Company, in Buffalo, N.Y., the American Government maintains an aircraft inspection school, in which about sixty men are constantly receiving instruction in the inspection of wooden parts. After ten days of instruction at the Curtiss plant, they are sent to the Forest Products Laboratory at Madison, Wis., for a further week's course, and then they return to Buffalo or are sent elsewhere to go to work.

Naturally, the American Government is taking lumbermen to inspect the wooden parts that go into the aeroplanes, so that, while the course of instruction may not seem to be very long, they have the essential training that enables them quickly to comprehend the necessary points in the inspection. The status of men in this service is that they are civilians in the army service. They told very interestingly of the manner in which inspection is made of the wood going into aeroplane construction, and the very great care exercised in making each part as nearly perfect as possible. At present the

Curtiss Company is using spruce as much as possible, but quite a bit of ash is necessarily used. For the propellers, mahogany is used principally, with a small amount of quartered white oak. The quartered white oak is giving excellent satisfaction, and, while mahogany will be used as long as possible, and some black walnut, it is thought that white oak will soon be the principal wood used for propeller building. Some doubt is felt as to the possibility of securing enough spruce, so that the expectation is that more ash will be used and possibly some rock elm, as well as Douglas fir.

Menus for Logging Camps

Besides furnishing the timber necessary for ships and airplanes, the logging camps can do their "bit" toward helping win the war by conserving the food supply, according to the United States Food Administration, which has just issued suggested menus covering breakfast, dinner and supper for a period of 15 days. The slogans of Mr. Hoover's department are to "Buy with thought," "Cook with care," "Use less wheat and meat," "Serve just enough," and "Use what is left." The bills of fare suggested for logging camps and all operations where a large number of men must be boarded, are made up with these principles in mind. They provide for a varied and abundant diet, but one which avoids waste and reduces as much as possible the demand for beef, pork, white flour and sugar. The suggested bills of fare have been sent to the headquarters of the National Lumber Manufacturers' Association, Chicago, and will be distributed by that organization to lumbering operations throughout the United States, with the request that the recommendations of the Food Administration be followed wherever possible.

Red Gum's Value for Veneer Cutting

More veneer is cut from red gum than from any other three or four woods in America, and most of it is cut by the rotary process. Two or three reasons may be assigned for the high place held by red gum. It is abundant, and its inherent qualities give it value; but there is another reason why the rotary veneer cutter holds it in esteem. The symmetrical form of the trunk makes it an economical wood to work on the rotary lathe. Little need be cut away and wasted in making the logs round, they being naturally round. Perfect sheets are produced almost from the first turn. That is an important matter in the course of a season's run, for the heaps of waste and of imperfect sheets are reduced to a minimum.

That would not be the case if red gum boles were lopsided and

ribbed, as some of the cedars, birches and maples are. It might be necessary to cut away nearly half a log before a perfect sheet of rotary veneer could be obtained. There are other woods as symmetrical in form as red gum. Among such are yellow poplar and tupelo gum. The cutting of rotary veneer is more exacting than is the ordinary sawing of lumber; for a log may be repeatedly turned, if of irregular form, in order to get the best lumber, but the veneer sheet must go round and round from the beginning to the end of the operation, and it is important that the log be of regular form.

A panel made of sheets of veneer with the grains of the different layers crossing at right angles is considerably stronger than a board of the same thickness all in one piece. That is because wood splits more readily than it breaks. In a board, the grain all runs one way, and by splitting along that grain the board parts and becomes two pieces; but that cannot happen with a panel made up of sheets with the lines of cleavage at right angles. If one sheet splits, that next to it must break across the grain. Not only is such a panel more difficult to split than is a board of equal thickness, but it offers greater resistance to tendency to warp.

H. R. MacMillan, formerly chief forester for British Columbia, and more recently the assistant manager of the Victoria Lumber and Manufacturing Company, Chemainus, B.C., is now working with the Imperial Munitions' Board. He is conducting a thorough investigation into the possibilities of British Columbia spruce for airplane manufacture, and Major Austin Taylor, of Montreal, has been appointed director of aeronautic supplies of British Columbia.

Review of Current Trade Conditions

Ontario

Holiday conditions have prevailed of late in the lumber trade of Ontario, and, together with the approaching inventory operations and the changeable weather, have resulted in a very quiet season. It is not likely that any important trade improvement will develop in the near future. The customary severe winter weather of January, February and March are now upon us, and may be expected to limit the movement of lumber to the minimum that is necessary in connection with those lines of business that continue to use stocks throughout the winter. Building operations which have been exceptionally light throughout the past year, have fallen off to almost a negligible quantity. The trade with the farmers which showed a little more life than usual a few weeks ago has again dwindled down and amounts now to a very small volume representing only such repair and alteration jobs as are absolutely necessary. Factory consumption is the chief source of trade, and is particularly good with the various war industries. The country yards are not carrying as much stock as usual. One reason for this is that they have not capital enough, on account of the increased cost of lumber. The result of this is that when they require any new stock they put in urgent orders and want immediate shipment, which is practically impossible on account of the shortage of cars.

The demand from the United States is better than it has been for years. This no doubt has been caused by the war requirements. All of the stock for this trade is going across the line in foreign cars and so far there seems to have been a sufficient number of cars of this class to take care of it, although Canadian railways claim that there is a much greater percentage of their cars in the United States than of foreign cars in Canada.

There is no movement in lath at present. It is quite possible that very little lath will be produced this year on account of the high prices of slabs. Shingles are expected to rule higher in the near future than they have been in the past few months.

Reports from northern Ontario indicate that the output of logs during the coming winter will be reduced fully as much as has been predicted during the past month or two and that it will not amount to more than 60 to 65 per cent. of last year's output.

The holiday season resulted in a very quiet trade at Ottawa during the latter end of December. Enquiries and orders, however, are more numerous than they were a year ago. The market continues firm and further price advances are expected during the late winter. Stocks held by wholesalers and retailers are light as compared with those of a year ago. There is much concern over the car situation, some of the large firms having extensive stocks on order which they cannot ship. The demand from the United States is good, most of it being for stock required for munitions work. Some improvement is reported in connection with the labor situation in the lumber camps.

Eastern Canada

There is very little of interest to report from the Montreal market. The trade with the United States, both import and export, is still handicapped for want of cars. Prices in practically all lines are well maintained. Local trade is slow. Most of the yards have very low stocks, but are purchasing only from hand-to-mouth. The building trade is very quiet and the outlook in this direction is not promising. Shell box manufacturers are hoping for some extensive orders during the new year.

There is a good demand for random spruce covering boards at Boston, and the market is also fairly active for matched spruce boards. At New York the demand for spruce is limited by the scarcity of stock and the difficulty in making deliveries. Yard stocks are low and buyers are ready to pay the prices that are being asked. Stocks purchased for government contracts are being moved readily enough. Stocks at mill points are reported to be badly broken. The general expectation is that higher prices will prevail in the spring. Retailers, therefore, are showing a tendency to place orders on today's basis, even though they can obtain no promise in regard to shipments. Hardwoods at Boston are not quite so active as formerly, but prices are very firm on all lines, and buyers do not seem very anxious to stock up.

United States

Government business in lumber in the United States continues on an enormous scale. The most important factor in connection with the general market is the car shortage, and this makes it difficult to estimate the actual movement of stocks, or the volume of buying on

the part of retailers. In the southern pine territory the mills are well loaded with orders, and are frequently refusing to accept further retail trade. Some prominent manufacturers have actually withdrawn from the market. The holiday season, the approach of the inventory period, and the severe weather have all reduced the volume of buying by retailers. Prices on all sizes of timbers are very firm and yard stock also is strong, a number of advances having been effected.

Douglas fir production is showing an increase which is likely to be kept up as far as possible. The government continues to place large orders for fir and the quotations to civilian purchasers have a continued tendency to advance. There are plenty of special cutting bills and good prices are being realized. Fir prices, generally are firm.

There is a good demand for all grades of white pine. In fact any stock offering can be absorbed. Retailers who were making fairly extensive purchases to fill out broken stocks, have reduced the volume of their buying, but factory consumers are still a strong element in the market. Shipments of white pine from the north during the past year have been greater than the cut. The same applied to the previous year, and therefore the stocks today are badly depleted. The government is buying large quantities of white pine. The outlook is that this year's production of white pine logs will be much curtailed and that the cut of 1918 will show quite a reduction. All white pine prices are firm.

The effects of the car shortage are being felt in every section of the country and no immediate relief seems to be in sight. The question of price control of lumber on the part of the government is being discussed very widely. There is a feeling that the plan would work out satisfactorily in the lumber business if applied along lines similar to those used in connection with the steel and coal trades, but it would necessitate the adoption of modern methods of accounting on the part of the retail trade.

There is a strong market for spruce. Undoubtedly a large quantity of spruce will be used in the rebuilding of Halifax and this will provide an outlet for much Canadian wood that otherwise would find its way to the Eastern States. There seems to be a large enough market to take care of all the spruce boards and frames that can be shipped. In the west the chief attention in connection with spruce is coming from the airplane trade. This is producing large quantities of low grade stock which is being absorbed locally in box shooks, etc. Western spruce prices continue firm.

Great Britain

There is very little to report in connection with the London spot market, so far as city merchants and importers are concerned. Goods continue to reach London in limited quantities and some transactions are reported between merchants, for goods that are required for urgent purposes and can be found in stock. These, however, do not amount to very much and the majority of the trade are doing very little in foreign goods. Most of the demand has now to be met by the home supply, and this is not sufficient for the purpose. All country mills are overloaded with orders, and are unable to make shipments as extensively as they desire, because of the great demands upon the railway companies. Deliveries at London docks maintain their recent average, but are much lower than those of a year ago.

The Liverpool trade is chiefly interested nowadays in the proceedings of the Timber Controller and is a little encouraged because of his expressed desire to receive concrete proposals from a committee appointed by the trade. At present, however, conditions are far from encouraging; in fact they are the very reverse. The records for the month of November show imports of a fair quantity of stock. Marketable goods on hand are extremely scarce, and this condition is prevalent elsewhere throughout the country. Some importers are looking into the possibility of buying f.o.b. stock and a moderate number of contracts have been reported as booked. A small quantity of American hardwoods has reached Liverpool recently and has all been sold "ex quay." Some of it has even changed hands immediately, many importers being prepared to take a small profit on a quick turn. These stocks have been reaching Liverpool as dunnage wood. Generally speaking the various parcels have arrived in pretty good condition. At Manchester, the trade in foreign timber continues to dwindle. Bad weather has interfered greatly with the timber trade all over England of late, and the difficulties of haulage have been great. Sawmills generally are busy, but builders are very quiet.

Very little fresh business has developed at Glasgow of late.

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

Market Correspondence

**SPECIAL REPORTS
ON CONDITIONS AT
HOME AND ABROAD**

Holidays Slacken Ottawa Trade

Ottawa, December 22 (Special to the Canada Lumberman):—Local and export trade slackened in the Ottawa lumber market during the closing period of December. Dealers attribute the falling off in trade to the Christmas and holiday season. Considering the period of the year they report that inquiries and orders are more numerous than during a corresponding period a year ago. During the last two weeks of the year a few orders and a little new business came in. The lull, it is predicted, will last to January 15th or 20th.

The market is very firm and shows no signs of weakening. Prices on practically all grades (except those used for building) are expected to advance during the late winter or early spring months. The stocks held by wholesalers and retailers are not as large as they were a year ago. A shortage of some grades is expected. The car situation is causing considerable concern. W. C. Edwards, and Shepard and Morse have twelve million feet of lumber on order that they are unable to ship. According to information given the Canada Lumberman from a reliable source there are hopes entertained by the C. P. R., after communication with Washington, that the car situation will improve.

The embargo placed on the export of pork (except under license) from the United States is beginning to cause trouble for at least one lumber company at Ottawa. Food Controller Hanna on behalf of the Canadian lumbermen has made requests to the authorities at Washington to permit pork being brought from the United States to Canadian lumber camps. At the date of writing no license to bring the pork into Canada had been granted by the American Food Controller. A serious situation may ensue as the pork has to be gotten into the woods camps for this and next season's use.

The Canada Lumberman, on inquiry at the Food Controller's office, was informed that the American hog population had decreased nine million head—about three times the entire hog population of Canada. The Food Controller is still working on the situation.

Contracts for 100,000 cordite boxes have been let by the Imperial Munitions Board. The Board states that the G. E. Lindsay Company, of Toronto, and the Nicholson Lumber Company, of Burlington, Ont., each received a contract for 50,000 of these boxes. The contract price has not been made public as yet. Boxes of similar design were made by Ottawa plants, a year ago, at \$1.26 per box. Tenders for other grades of powder boxes closed December 31st.

Gilmour and Company expect a shortage of box spruce and box white pine to develop shortly. These stocks, the firm reports, are hard to obtain and the prices high. "The market is very firm and if the American demand continues through the winter, as in the summer, as the New York market now indicates, there will be heavy shipments of lumber from Canada," says Mr. Gilmour. American orders to Gilmour and Company are keeping up well. The majority of the stock required is for munitions work. Consequently this company has less difficulty in securing cars for shipment than some of the other firms.

W. C. Edwards & Company have 10,000,000 feet of lumber on order at Rockland which it cannot ship. Stocks from the Ottawa yards are moving somewhat faster than at Rockland. The woods labor situation has improved. Two hundred and twenty men went to the Gatineau Valley camps when the Rockland mill closed. The company is experiencing difficulty in securing delivery of a consignment of "pickled" pork from a Chicago packing house. The packing house is unable to obtain a permit to forward it to Canada.

The Hawkesbury Lumber Company has about 2,000,000 feet on order awaiting shipment, but no cars are available. The labor situation in the Hawkesbury camps is improving. About 400 men are in the woods. The season's cut so far is about twenty per cent. behind. The company does not intend to cut as much as last year. Mr. Russell Blackburn reports that orders amounting to upwards of 2,000,000 feet have had to be refused on account of the car situation.

John R. Booth has thirteen camps established and about one thousand men in the woods. His cut this season will be chiefly pulpwood. The Booth camps, so far, have not been affected by the American pork embargo.

The Estate James Davidson commenced its annual shut down for repairs at noon on December 22nd. The plant will remain closed for two weeks. Good progress has been made on the 128,000 shell box order. About 50,000 of the boxes have been completed. Several inquiries for sash and doors have been received from Halifax. This

plant donated a carload of Beaverboard to the Halifax refugees. Woods operations continue favorably.

J. Oliver and Son continue to work above capacity on furniture orders and shell boxes. About one hundred men are engaged. Some lumber for furniture manufacture is being secured from New Brunswick.

Quiet Trade at Montreal

Montréal, December 22 (Special to the Canada Lumberman):—The market presents few features of interest. The car situation continues to be a factor, both as regards domestic and United States trade. Wholesalers who have purchased lumber in the States say that shipments are exceptionally slow, while firms selling to the States report that business is fairly good, but they, too, are handicapped for want of cars. Lumber is difficult to get, and prices are maintained.

Naturally, at this season, local trade is on the slow side. The yards are reported to have very low stocks, buying merely from hand to mouth. There is little or nothing doing in the building line, and so far as can be judged, the outlook is not very promising.

Manufacturers of shell boxes are looking forward to some good orders in the new year, and also hope that prices will be on a more remunerative basis. At present, contracts are taken at prices which show little profit, and for this reason, with a rising lumber market, two or three firms have given up this department.

There has been a falling off in timber sales, which until lately, were brisk, owing in part to the shipbuilding activity. It is reported that Quebec exporters to the United Kingdom are purchasing spruce and birch timber in considerable quantities.

The market for sulphite keeps up, with a fair amount of business passing. The Riordon Pulp and Paper Company are exporting to England and Japan. The ground wood section is quiet, but prices are steady.

Parrsboro Shipments During 1917

The boards, scantling and plank exported from Parrsboro to the United States this season up to November 30th total 9,524,909 superficial feet, valued at \$168,104.95. A cargo of about 350,000 superficial feet has been exported since the date given above and will be the last sent out this season.

The laths exported total 7,058,700, and are valued at \$21,653.75. The exportation of piling amounted to 9,605 pieces, valued \$21,652.50.

One cargo of deals totalling a little over four million feet was shipped in an Imperial transport under sealed orders.

Nine tern schooners aggregating 3,798 tons register and averaging 422 tons each have been added to the registry books of the port of Parrsboro this year.

Eight tern schooners, which will aggregate approximately 3,140 tons register, and three four-masted schooners which will total about 2,200 registered tons are in course of construction along the Parrsboro shore and will be launched next year. Probably others will be added to the list.

England Restricting Honduras Mahogany Trade

A report from British Honduras announces that the British Government has signified its willingness to purchase all the mahogany that can be cut during 1918, provided it measures not less than 10 feet long, net, and not less than 18 inches in diameter in the round. It is understood that the British Admiralty requires the whole of the colony's output of mahogany logs of these sizes, and that none will be allowed to be exported elsewhere without special license. Apparently, the proclamation of the British Government, in this connection, will prevent any mahogany being exported to the United States, where most of it has been going in recent years. It is possible, however, that special licenses for export to the United States will be available.

The Geo. Hall Coal & Transportation Company have purchased the fleet of boats of the Frontier Trading Company of Ogdensburg, N.Y., and the Canada Shipping Company, Montreal. A portion of the 16 boats will be placed in the wood pulp trade between ports on Lake Ontario and the St. Lawrence River.

Further Canadian forestry drafts from Windsor, London, Brockville, Winnipeg, Vancouver, Regina, Quebec, and Sussex, N.B., have arrived in England.

The Art of the Salesman

One of the numerous good addresses delivered at the recent Northern Lumbermen's Salesmanship Congress, at Bay City, Mich., was that of Mr. Edward Hines, of Chicago, who devoted most of his time to a discussion of salesmanship. In the course of his remarks Mr. Hines said:

"The world to-day recognizes salesmanship as an art and a profession. The biggest prizes with which success can allure men go to the seller. Upon him depend thousands upon thousands of faithful, conscientious workers who lack initiative, and the populace at large, which needs to be lifted out of indifference and an adherence to the old and worn, to new methods, applications and objects. The discoveries of the centuries upon which we look with pride are not only the work of the intensive mind fired with the flame of genius, but are the reflex results of the world's demands. Sellers as much as inventors stand behind them. It is not merely the personality of the seller which makes things happen, but the selling quality in him that surges beyond him, and we read him in the street cars, we see him coaxing from shop windows, he beckons us from fence and billboard, in the newspaper and daily mail, and we see the night sky electrically flooded with him.

"The standard of excellence in selling is high. All positions in the world which are recognized and honored have had to make their ascent against public antagonism. In exact ratio to the stubbornness of the fight the apparent insurmountableness of the opposition is the place achieved and the world's homage to the conqueror.

"Power, in its many forms dormant in men, awakens under attrition and opposition on the one hand and the urge of enthusiasm and inspiration on the other. Nothing great comes from opposition alone, nor from enthusiasm only. Achievement has paid its price in the overcoming of obstacles; in unwaveringly aligning accomplishment with inspiration. The daring of the human mind is the generative principle of progress. The achiever overcomes inertia and compels opposition to serve his desire. He subdues elements both within him and without, that either are acting in opposition to his best-laid plans, or are not in accord with them.

The Overcoming of Obstacles

"Measuring difficulties is one of the most serious tasks mankind is compelled to perform. If in your organization work you succeed only in demonstrating that troublesome difficulties may be circumvented and turned to useful purposes your progress will be assured and your work abundantly repaid. Scientists told Napoleon it would be impossible to cross the Alps. They proved it theoretically. "There shall be no Alps," was the unqualified answer, which will live as an inspiration for all time. And the spirit that answered thus was the spirit that crossed the Alps. When Grant first proposed the siege of Vicksburg and laid his plans before Sherman, who was admittedly one of the greatest tacticians in the Federal Army, Sherman showed on paper the utter futility of the proposed operations and endeavored to dissuade Grant from his purpose. Events that soon transpired proved that Grant was right. He had measured the difficulties, and contrary to every then known strategy of war, he surmounted them and Vicksburg fell.

"In your every-day life you meet situations that demand your best attention and your most thoughtful consideration. Just how much of each do you give, and how often do you neglect to give the best there is in you? It is a deplorable and a much to be regretted fact that a too lax interest in the vital needs of your problems hinders progress and delays the attainment of results that ought not be subjected to any delay whatsoever.

The Business Letter

"There is one extremely important subject which I trust your conference will not overlook, as it has so much to do with successful salesmanship and cannot—indeed, must not—be neglected. It is the business letter. If there has been one development in the last generation that has contributed more than any other to business growth it has been the development of the business letter. Letters—right letters—are no longer mere stereotype paper mediums of solicitation and acknowledgment. They are living, breathing personalities, with all the capabilities and characteristics of the men behind them.

"Forty years ago the only letters that showed symptoms of red-blooded authorship were impassioned love missives and the opinionated chronicles of statesmanship. Then someone, somewhere, conceived the idea that human interest could be woven into a business letter as well as into a personal message; that a business letter, after all, was but a personal message, and that it was possible to talk to a man a thousand miles away in the same words that you would use if he sat beside your desk.

"Personality is what marks one man among the thousands—what marks the letter we remember among the hundreds it is no effort to forget. Every new machine or process, every novel plan, scheme, or principle, is a tool in the hands of to-day's success builder. And the original thought, the paragraph or letter that abandons yesterday's formalities, that hits straight, that hews to the line of you, is the stone for to-morrow's tower of business.

"Time forbids the discussion of this subject except briefly. I have touched upon it because, to my mind, it occupies a relatively important place in the study you are giving to the subject of salesmanship, and the honest and diligent efforts you are making to gain recognition in a chosen field that offers the highest inducements for your best work. Remember, that the stupid, ill-dressed letter dissuades more buyers than all the errors salesmen make. The neat and self-forgetful sheet brings with it its own welcome motto. Plan your letters logically, but keep one end in view—to crystallize wants, turn desire to decision, get results, the order—now.

Planning Business Letters Effectively

"If you suggest that you can help the reader of your letter you are sure to have his attention. Tell how, and you have his interest. Prove it, and you are likely to have his signature. Vitalize the facts. Let your correspondent know that you have a personal interest in his welfare—a real personal interest that is not measured wholly by his order and his dollar. Talk to him along the purple ribbon, as one man would talk to another—with point, tact and brevity; with keen business sense and clever understanding of his needs. In return you will win the close personal association and active support that builds business. Put into every letter, every paragraph, and every phrase your undivided and focused force. Concentrate your thought upon it, undiluted with the worries of the past, unaffected by anticipations. Give every problem your best—finish it, and then forget it.

"The concentrated centralization of all your best efforts to succeed in the art of selling are spelled in just one word—work. The love of work is the lubricant that keeps the machinery running smoothly and prevents rust and decay. Contrive to keep up your interest and find in your work the needed stimulant to create a desire to do each task just a little better than you performed the preceding one. Have faith and be of good cheer. Build your edifice upon a foundation that is laid with the gems of your industry and add to your structure elements that are safe and enduring. Remember that no matter how well you build, your strength shall always be in proportion to your manifestations of honest and unprejudiced interest. Avoid the pitfalls that are blasted by selfishness and hide-bound policies of self-aggrandizement, and be courageous and unyielding in your adherence to a broad and liberal policy of doing things that are of the greatest good to the greater number of your membership."

Liverpool and Manchester Stocks

The following report upon Liverpool and Manchester stocks for the month ending November 30, 1917, is furnished by H. W. Lightburne & Co., Liverpool, England:

The commander-in-chief of the Dutch army has notified the corps commanders that an experiment is to be made with wooden soles for shoes, in consequence of the increasing advance in the price of leather. For the experiment 5,000 pairs of shoes will be made; 2,000 are now ready. The wooden soles will be on new shoes, each pair having an extra set to replace worn-out soles.

To the Lumber Companies of Canada:

You have the Goods. Place your Lists with full particulars in our hands. We are in daily touch with all the Buyers in the United Kingdom.

PLEASE NOTE.—We pay cash against all documents, and take the whole of the Delcredere risk on Buyers.

Install a KRAFT SODA MILL

CANADA has another big war opportunity: Great Britain needs more wood pulp. Install a small Soda Pulp Plant and Supply this need by converting your

Slats, Tops, Bottoms and waste wood around the Saw Mill into pulp. We can dispose of any amount. Previous sources of supply in Sweden, etc., have recently been withdrawn and Canada now has a free field in Great Britain to market unlimited quantities of wood pulp. We can arrange contracts for long periods.

The cost of installing plant is small and you make a sure profit from waste material.

U.S. Ammunition Box Requirements

Having perfected specifications for standard wooden packing boxes for ordnance equipment for the United States army, Lieut. H. N. Knowlton, of the Ordnance Department of the Army, who was formerly in the United States Forest Service, stationed in the West, is at work with other experts studying wooden ammunition boxes and shell cases with a view of standardizing the specifications for these boxes, of which an endless quantity will be needed.

Lieut. Knowlton says that he could not give a guess how many boxes the United States army will require or what quantity of lumber will be used in making them or what the material will yield the lumbermen. It is known, however, that a single contract for cartridges for the army will require considerably over 10,000,000 feet of lumber to box them, and there is no end to the millions of cartridges, shells, guns, and other ordnance equipment that will require boxing. Officers of the National Association of Box Manufacturers estimate the probable needs of the government at ten billion feet.

At present there is a different kind of ammunition box for each type of ammunition. Generally the specifications have permitted the use of only one or two kinds of wood. The ordnance equipment boxes, for instance, had to be all of white pine. Now, under the new specifications, a great many different kinds of wood, hard and soft, can be utilized and substituted for each other on the basis of their weight.

The woods are grouped according to weight, and Lieut. Knowlton says that it is very important that a box should be nailed correctly, so as to stand handling and shipment. Hence the new specifications are strong on the nailing question. In a great many cases the army contracts require the contractors for the ordnance material and equipment to furnish the boxes to ship them in, but the contractors are required to furnish boxes according to the army specifications.

So great is the demand for boxes and box material getting to be that progressive lumbermen take the position that the government should use every wood that is available. That is the view of J. M. Pritchard, the new manager of the Southern Hardwood Emergency Bureau. Recently Mr. Pritchard was pushing gum for inclusion in the government box specifications. That has been accomplished so far as

the ordnance packing boxes are concerned. Now Mr. Pritchard takes a broader view of the situation, and thinks that all available hardwoods should be utilized. As he concedes the suitability of various softwoods for this purpose, his idea embraces all available woods for box manufacture. Mr. Pritchard believes that an enormous quantity of boxboards will be needed.

Following are the new official specifications, covering lumber, for ordnance packing boxes:

Lumber Specifications

"Lumber entering into boxes must be sound (free from decay and doté) and well seasoned. (An average moisture content of 12 to 18 per cent., based on the weight of the wood after drying.) Lumber must be free from knot holes, loose or rotten knots. Knots whose dimensions measured between the perpendicular to lines touching edges of knots and parallel to the edges of the board exceed one-third width of the board will not be permitted. No knot whose dimension measured in this manner exceeds three inches will be permitted. Knots which interfere with the proper nailing of the box will not be permitted.

"Grouping of species of wood: The principal woods used in boxes are, for the purpose of these specifications, classed in four groups.

"Group 1—White pine, Norway pine, aspen, spruce, Western yellow pine, cottonwood, yellow poplar, balsam fir, chestnut, sugar pine, basswood, cypress, willow, noble fir, magnolia, white fir, buckeye, cedar, redwood, butternut, cucumber, Alpine fir, lodgepole pine.

"Group 2—Southern yellow pine, hemlock, Virginia and Carolina pine, Douglas fir, larch.

"Group 3—White elm, red gum, sycamore, pumpkin ash, black ash, black gum, tupelo, maple, soft or silver.

"Group 4—Hard maple, beech, oak, blackberry, birch, rock elm, white ash.

"Thickness of lumber: Groups 1 and 2 woods—When groups 1 and 2 woods are used the thickness will be $\frac{3}{4}$ in.

"Groups 3 and 4 woods—When groups 3 and 4 woods are used the thickness will be $\frac{5}{8}$ in.

"Widths of lumber: (a) No piece of less than $2\frac{1}{2}$ in. face width shall be used in sides, top, bottom, or ends.

"(b) Not more than one piece less than 5 in. in width shall be used in any one side, top, bottom, or ends, except when side, top, bottom, or end is so narrow that this, together with 'a' above, would necessitate the use of a single piece.

Surfacing: The purchasing officer will in each case specify whether boxboards will be S1S or S2S. When S1S the surfaced side will be the outside.

"S2S should be specified when contents are such as to be damaged by abrasion on rough boards.

"Considerable economy will result from allowing $\frac{5}{8}$ in. material to be S1S, since two thicknesses can be cut from nominal $1\frac{1}{2}$ in. lumber, while $\frac{5}{8}$ in. S2S sometimes requires 1 in. lumber for one thickness. Little, if any, economy will result from allowing $\frac{3}{4}$ in. material to be S1S.

"Joining: All joints between boards shall be tongued and grooved or Lindermann jointed. When tongued and grooved must be tight matched. When Lindermann jointed, the specification requiring not more than one piece less than 5 in. in width in a single side, top, or bottom shall not apply."

Herbert F. Hunter Now in Business for Himself

Mr. Herbert F. Hunter, whose advertisement appears in this issue of the Canada Lumberman, is well known to Canadian manufacturers of lumber, and to hardwood users, as he has been doing business in Canada along these lines for a number of years. Mr. Hunter was formerly with the Palmer-Hunter Company, of Boston, Mass., lumber manufacturers and wholesalers. Recently, however, he went into business entirely for himself. Mr. Hunter has been buying and selling lumber, both northern and southern varieties, for the past twenty years, and operating his own mills in Vermont. He is an extensive buyer of Canadian maple, birch and basswood, and deals extensively in mahogany. Canadian users of mahogany will be interested to learn that Mr. Hunter has ready for immediate shipment large quantities of Philippine mahogany in only the best grades of stock.

The offer of the Lumbermen's Section of the Toronto Board of Trade to furnish a number of carloads of slabs to be distributed among the poor of Toronto, which was made at a recent meeting of the Section, has been readily accepted by the city. Property Commissioner Chisholm is in charge of the distribution of the wood. Already several carloads have been secured and others will be available at the call of the property commissioner. The offer of the Toronto lumbermen was the result of information having been received to the effect that many of the poorer classes in Toronto were in great need of firewood and were even tearing down their fences in some sections of the city.

EDGINGS

Ontario

The Union Lumber Company, Ltd., Toronto, Ont., have increased their capital stock from \$50,000 to \$500,000.

Robert J. Harmer, Fullarton, Ont., is rebuilding his sawmill which was recently destroyed by fire. The loss amounted to \$10,000.

The Ontario Government has sold a limit of 80 square miles on the Shibley Reserve to the Port Arthur Pulp and Paper Company, Port Arthur, Ont. The pulpwood was sold at 70c a cord, in addition to dues of 40c on spruce and 20c on other timber.

The Spanish River Pulp and Paper Mills, Espanola, Ont., have completed the erection of a large addition to their ground wood building. Ten new grinders are being added and several new wet machines. The new equipment will increase the output of chemical pulp by nearly 50 per cent. The company have also completed a new store at Espanola.

The Canadian General Lumber Company, Ltd., has been incorporated, with head office at Toronto and an Eastern office at Montreal. The personnel of the company consists of the principals of the firm of Graves, Bigwood & Co., Toronto, together with prominent members of the company's sales force. The new company will distribute Graves, Bigwood & Co.'s stock on their own account, and will also handle the other lines which have formerly been handled by Graves, Bigwood & Co. A more extended notice of this company's plans is published elsewhere in this issue.

The successful tenderers for the pulpwood limits in the Kapuskasing District of Northern Ontario, recently placed on the market by the Ontario Government, were "Spruce Falls Pulp and Paper, Ltd.," head office 84 King Street East, Toronto. The owners will erect a pulp mill, to cost at least \$1,000,000, the daily output of which will be not less than 100 tons of pulp. The limits acquired cover 1,740 square miles. In connection with the pulp mill the owners will erect a large digester house, blow-pits, sulphur storage, acid plant, boiler-house, machine shop, screen room, drying plant, conveyors, etc. They will be ready to consult with general contractors about the end of March, 1918. The company will generate power from several falls on the Kapuskasing River. Dams, power-house, fumes, filler plants, etc., will be erected.

The Mingo Pulp, Paper, and Land Company, which was recently granted a charter and has its headquarters at Toronto, has elected the following officers: W. A. Brodie, Toronto, president; Clarence R. Pope, New York, vice-president and general manager; S. E. Moore, Toronto, secretary-treasurer. The company's capital stock is \$1,000,000. It owns over 20,000 acres of land in the Townships of Borden, Chewett, McGee, Gamey, D'Arcy, and Cochrane. The property is located northwest of Chapleau, and is traversed by the C.P.R. on the south and the C.N.R. on the north. It contains spruce, poplar, cedar, and tamarac. The company will take out 75,000 cords of pulpwood a year, and will establish a large rossing plant at Devon, Ont. The company's output of wood will be sold to pulp and paper mills in Wisconsin. The company estimate that they have 3,000,000 cords of pulpwood on their holdings.

Eastern Canada

The St. Paul Lumber Company, Montreal, P.Q., have been registered. Joseph P. Dupuis and J. S. Prejent are interested.

The International Shipbuilding Corporation, Ltd., at Nordin, near Newcastle, N.B., expect shortly to lay the keel for their first vessel.

A shipbuilding plant is to be created at Catalina, Nfld., at a cost of \$2,000,000. The plant will construct a number of vessels for the government.

Stetson, Cutler & Co., St. John, N.B., are rebuilding their cooper shop at Indiantown, at a cost of \$5,000. The owners will supply all the material and do all the work.

The factory at St. John, N.B., of which Thomas Nagle is manager and which was recently destroyed by fire, is being rebuilt at a cost of \$30,000. The building will be four storeys and of brick construction.

The Tusket Shipbuilding Company, Tusket, N.S., has acquired several old shipyards and is negotiating for a number of others. It has four vessels under construction at Shelburne, N.S., and four at Liverpool, N.S.

A shipbuilding yard is being put into operation at Rexton, N.B. The company is a Montreal concern, and has already started operations. It will employ from 100 to 150 men, and already has contracts for four vessels.

Plans are being prepared for the erection of sulphite and paper mills at Cap de la Madeleine, P.Q., to cost \$1,000,000, by the Belgo-Canadian Pulp and Paper Company, Shawinigan Falls, P.Q. Tenders for the above project will be called next spring.

The Three Rivers Box Company report that the plant they are erecting, together with the site upon which it is located, will cost between \$92,000 and \$95,000. The plant will be equipped with the most modern machinery obtain-

able. All the buildings will be of brick and solid cement, with cement floor and gravel roof. The company will also erect a dry kiln. The whole plant will be protected with automatic sprinklers.

Western Canada

The Sidney Mills, Ltd., near Victoria, B.C., are getting ready for export trade.

J. Coughlan & Sons, 500 Beatty Street, Vancouver, B.C., are building an addition to their shipbuilding plant, at a cost of \$250,000.

Six years ago Dominion timber berth 551, on Squawllits Island, B.C., was put up for sale and failed to find a buyer, the upset price being \$2,150. It has just been sold for \$5,700 to R. C. Morrison, of Blaine.

The Hall Match Company, Ltd., has been incorporated, with head office at Victoria, B.C., and capital stock of \$25,000, to carry on business as match manufacturers, importers and exporters, woodworkers, etc.

The Naysmith Lumber Company, which has a mill near Burnaby Lake, between Vancouver and New Westminster, B.C., has purchased limits near McGuire, on the P.G.E., above Howe Sound, and will move its mill there.

The British American Timber Company, Ltd., has been incorporated, with head office at Victoria, B.C., and capital stock of \$1,200,000, to carry on business as timber merchants, sawmill owners, loggers, and general lumbermen.

J. S. Deschamps, Rossland, B.C., has acquired eight sections of timber lands on Sullivan Creek, having purchased them from the Eastern Trust Company, Spokane, Wash. His intention at present is to take off only the pine and sell it for match stock.

Plans for a sawmill and other works to be erected by the Graham Island Spruce and Cedar Company at Queenston Harbor, Port Clements, B.C., have been filed with the Department of Public Works at Ottawa and with the Land Registry at Prince Rupert.

H. W. Wright, known from his connection with Merrill & Ring, and who has had charge of that company's operations in British Columbia for the past four years, has purchased timber from the provincial government, and will start operations on his own account.

The Nimpkish Timber Company, Ltd., has been incorporated, with head office at Vancouver, B.C., and capital stock of \$500,000, to carry on business as timber merchants, sawmill, shingle mill, and pulp mill owners, timber manufacturers, and general lumbermen.

The Merrill-Ring-Moore Company, Ltd., has been incorporated, with capital stock of \$150,000 and head office at Vancouver, B.C., to carry on business as timber merchants, sawmill proprietors, and timber growers, and to manufacture lumber, timber, sash, doors, etc.

The Hillcrest Lumber Company, Ltd., has been incorporated, with head office in the Seymour District, B.C., with capital stock of \$50,000, to carry on business as timber merchants, sawmill, shingle mill, and pulp mill owners and loggers, and as dealers in lath, sash, doors, etc.

Sealed tenders are being received by the Minister of Lands for British Columbia until January 16, 1918, for the purchase of License X395, to cut 1,855,000 feet of fir, cedar, and hemlock on an area situated on the Eagle River, New Westminster District. Two years will be allowed for the removal of the timber.

Sealed tenders are being received by the Minister of Lands for British Columbia until January 17, 1918, for the purchase of License X1082, to cut 1,300,000 feet of spruce, cedar, hemlock, and balsam on an area situated on Nowish Cove, Susan Island, Range 3, Coast District. One year will be allowed for the removal of the timber.

Sealed tenders are being received by the Minister of Lands for British Columbia until February 25, 1918, for the purchase of License Z926, to cut 9,655,000 feet of hemlock, spruce, balsam, and cedar on an area situated on Long Lake, Fraser Reach, Range 4, Coast District. Three years will be allowed for the removal of the timber.

Sealed tenders are being received by the Minister of Lands for British Columbia until January 10, 1918, for the purchase of License X1095, to cut 7,000,000 feet of spruce, hemlock, and cedar on an area situated on Dana Inlet, Queen Charlotte Islands District. Two years will be allowed for the removal of the timber. Further particulars may be obtained from the Chief Forester, Victoria, B.C.

Sealed tenders are being received by the Minister of Lands for British Columbia until February 20, 1918, for the purchase of License X894, to cut 12,470,000 feet of spruce, cedar, balsam, and hemlock on an area situated on Nootum River, Burke Channel, Range 3, Coast District. Three years will be allowed for the removal of the timber. Further particulars may be obtained from the Chief Forester, Victoria, B.C.

Montreal lumbermen have contributed freely to the supplies of building material sent to Halifax. The firms include the Riordon Pulp and Paper Company, Campbell-MacLaurin Lumber Company, R. MacFarlane & Co., G. A. Grier & Sons, William Rutherford & Sons Company, and the McLennan Lumber Company.

How the Cost of Doing Business Has Increased

Hanks & Gregg, the well-known organization experts and industrial economists, have just completed for the retail lumbermen of one of the more important centres of the Middle West a mercantile survey, showing the true conditions existing in that market. This survey developed some very interesting facts, particularly those that had to do with the increased cost of doing business.

This survey demonstrates conclusively the fact that it costs \$7.46 to handle a thousand feet of lumber at retail in this particular market, where a year ago it cost but \$5.58, or, in other words, the cost of doing business where these dealers are concerned shows an increase of close to 34 per cent. during the past twelve months. The survey covered the business of all the dealers in the market, and was made by the method originated by Mr. Hanks when he was engaged in making a similar survey of the entire retail lumber industry of the country for the United States Government some three years ago.

The \$7.46 cost, as developed for the market in question, is divided as follows:

Executives' salaries	\$.768
Office and clerks' salaries574
Yard labor and teamsters' wages	2.193
Stable expense127
Truck expense224
Insurance195
Taxes134
Depreciation455
Fuel, light, and power038
Rent paid053
Interest on investment	2.103
Bad accounts193
Miscellaneous expense403

\$7.460

This survey is made from the standpoint of practical lumbermen who make it a point to become thoroughly conversant with local conditions before undertaking the work. All records of the individual concerns were checked carefully and items of expense that had been omitted here and there were properly included. Executive salaries for the entire market were standardized under Mr. Hanks' supervision, and depreciation was in all cases figured upon a uniform basis. Close attention to these, as well as other important details, make it possible for these figures to stand entirely unquestioned and as highly authoritative.

Utilizing Waste in Woodworking

Some time ago a trade paper published a short paragraph telling how small waste was being glued up to form cores for veneering. Since then information has come to hand that this process is being used in the manufacture of sewing machine tops in the largest sewing machine cabinet work factory in the country and, inasmuch as this not only effects an important saving of waste, but produces an actually better top than if wide lumber were used in manufacturing the core for it, some further, more exact description of the process used will undoubtedly be of interest to many, says an English exchange.

Waste pieces are utilized as thin as 1/2 inch and as short as 3 inches. This waste is worked into the form of strips of a uniform width, dressed upon both sides and square ended to random lengths. The strips are then glued upon both faces, either by hand or by running through a gluing machine, and are then assembled upon a flat bench with a top of zinc or sheet iron and with a straight ledge at the back. Strips are built up on this in edgewise fashion, lengths being chosen to bring the assembly to the desired length, and this process is continued until the desired width is secured. If the strips have been cut to two inches in width the assembled laminated board will have a thickness of 2 inches. This is clamped and thoroughly dried, after which it is resawed and surfaced on both sides to 7/8 inch thickness and veneered for sewing machine tops. The trimmings from this top are used over again in the same manner, and the trimmings from seven such tops furnish enough material for the core for an eighth one. The reason for covering the assembly bench with metal is to provide a surface to which glue will not readily adhere.

B. C. Lumber Business Good

Reports for the month of November, 1917, show that British Columbia lumber mills have experienced their record in the way of orders. Nearly sixty million feet is the reported total, or approximately twenty million feet increase over the same period of 1916. The major part of this increase is accounted for by the demand from the prairies, while shipbuilding activities within the province also took large quantities. It is believed in lumber circles that providing the labor situation can be effectively handled and the logs secured, the next few months should see still greater increases.

"Living the out door life in comfort."

The Arctic Eiderdown Sleeping Robe

GUARANTEES PERFECT SATISFACTION—ALWAYS.

Of the thousands of these robes sold we have never had one returned, nor in any way condemned.

The Arctic Eiderdown Robe is absolutely wind and moisture proof. Frost cannot penetrate it. It is positively sanitary—the more sun and air it is given the more resilient and thicker it will become.

• Hunters, Motorists, Woodsmen and Lumbermen should never be without one. It can be slept on, in or under.

Its weight is almost nil, while its advantages are many.

Your Bit

You have probably invested in Victory Bonds, and contributed to the Red Cross. Perhaps you are economizing in many ways also; but there is still another way to help—save power.

Chapman Double Ball Bearings

save 20 per cent of power by eliminating friction. If you are wasting power in transmission you are wasting coal—one of the articles the government requests us to conserve.

It is not necessary to shut down your plant to install Chapman Bearings. They are interchangeable with self oiling bearings of the same shaft size, and power is not the only thing they save.

Let us tell you more about them

Skidding Machinery and Loading Machinery

FOR SMALL CAMPS

FOR LARGE CAMPS

No matter whether your output of logs be large or small, we can supply you with the right machinery to suit your output so you may make a big reduction in your skidding and loading costs.

Perhaps you think your output of logs would not warrant your installing machinery.

Perhaps you think that all logging machinery is costly and complicated, and unsuited to the needs of any but the very largest producers.

If you will give us the opportunity, we think we can show you that you can use machinery of the right kind; that it is comparatively inexpensive, and that it will give you big returns on your investment.

MARSH & HENTHORN, Limited, BELLEVILLE, Ont.

When You Overhaul Your Mill

THERE are wet places in every saw and pulp mill where nothing but the highest class belting can "make good." It is for these wet places that we recommend what most mill-men swear by—our

"ACME WATERPROOF" BELT

this belt is especially made for a rough and trying service. It has less stretch than any other belt by 15 to 25 per cent.

When you are overhauling try a Goodhue "Acme Waterproof" belt. Other Goodhue belts are "Extra" and "Standard."

Prices and Particulars on Request.

FOR SPEEDY WORK

USE COMPRESSED AIR

FOR EXAMPLE:

"The erection of the frame work of the Rochester Com-bined 300 ton mill is nearing completion, and sets a new record in mill construction."

"Compressed air is used in boring all timbers and driving ship spikes. A Little Tugger Hoist is used in placing timbers."

"Two shifts of carpenters are employed, the night shift working by electric light. . . . About 500,000 ft. B.M. of timber will have been used."

"In spite of the scarcity of supplies, the construction engineer, believes the mill will be completed by November 1st."—Mining and Scientific Press.

The use of pneumatic tools on construction work has come to stay. Labor is scarce and early production is required from every plant in course of erection in this country. The "Pneumatic Way" has proved to be the best for rapid work at minimum expense.

The "Little David" Wood Borer and the Little Tugger Hoist will be shown in later issues. Watch for them.

"CC-15" Drift Bolt Driver fitted with cross handle for down driving. This tool arranged with telescopic air feed, extension leg, was shown in last issue.

Write for information on "Little David" Pneumatic Tools, Air Compressors, and all equipment necessary to do your work the "Pneumatic Way"

INDISPENSABLES

IN these days of war tribunals one often hears the word "Indispensable." Such a man is indispensable to a certain business. Here then, is a machine which is indispensable to your business, if you employ more than a few men. The International Time Recorder enables you to tell when employees start work and when they quit. A very valuable assistance nowadays when good labor is at a premium.

"MARKING TIME"

You can soon comb out the slackers from your staff. If you don't know now; the machine surely does and will tell you. The International Time Recorder does not equivocate—it states facts, whether you like them or not, and by its statements you make out your pay roll.

Remember the Value of Time

Lost time is solid cash gone for good. Are you losing it? Is it guess work with your business? If so, bring your concern into line with all the most modern business houses. Install an International and make sure. It's worth while being sure. There is a time for everything. Today is better than tomorrow. Do it today, get in touch with our agents and talk it over. An International Time Recorder soon pays for itself—will last a lifetime, and does its work well.

Shipment by car,
canal boat or
cargo.

Owing to constantly increasing sales we are anxious to establish new connections with Eastern Spruce mills; for shipment by car to Boston and New York markets, or by canal boat from Quebec to New York.

We also desire more connections with manufacturers of British Columbia red cedar shingles and cedar siding.

We will buy outright or sell on a 5 per cent. commission.

We manufacture Spruce at our own Mills at Portage, Maine, U. S. A., and therefore we know what big prices mean to the manufacturer

In the Great Lumber
Camps "Asbestol"
Gloves and Mittens are
popular with every man

Made so thoroughly good that the lumberman can enjoy comfort and perfect hand protection on the coldest winter days. "ASBESTOL" Gloves and Mittens resist the effects of snow and hard wear. No other glove or mitten will give the wonderful service of "ASBESTOL."

LUMBERMEN, LISTEN!

Next time you want gloves or mittens that will give you the greatest service and comfort—and remain soft and pliable at all times—insist on "ASBESTOL."

Don't accept any substitute, because there is none other that will serve you like "ASBESTOL." There are many styles in both gloves and mittens, and you can get them from your local dealer.

"ASBESTOL" is the best value in a good work glove that money can buy. It will protect your hands and your pocket book, too.

Durable "HOE" Saws for all round satisfaction

Our No. 2½ Hoe Chisel-Tooth Saw (illustrated) is adapted especially for mills cutting heavy steam feeds. We make this size in suitable gauges for Edgers, Bolters and Lath Machines. All Hoe Saws are durable because they are made according to standards which have proven trustworthy under working conditions.

Write for Catalogue

R. Hoe & Co.

504-520 Grand Street
New York City

We have more than one hundred years of good saw making to our credit, and can offer Canadian lumbermen the benefit of this experience in connection with their cutting problems. Put it up to our specialists. We can save you money by our service.

Plain

Swaged

Swaged and Shaped

Swaged, Shaped and Filed

A superior quality of saw steel must possess to the highest degree that perfect combination of ductility and toughness which will enable it to successfully withstand the extremely severe strains given in the "fitting-up" processes of swaging and shaping the teeth.

Standardized Series LEATHER BELTING

Tanned by us for belting use

A Belting Catechism

What are the Advantages of Leather as belting?

Leather is the standard belting material. When properly tanned for belting, its surface will grip the pulley in the most effective manner. Good leather belting is economical and reliable. It will transmit power with 98 per cent. efficiency.

How can leather belting be made uniform?

The manufacturer must first set up definite standards of quality—and strictly adhere to them. As he cannot secure belting leather in the open market of uniform quality, he must tan his own hides. He must tan them in sufficient quantity to enable him to select for each belt, pieces up to his standard. These pieces must be uniform in weight, stretch, texture, and quality.

Why should belts be rigidly graded?

A belt is no stronger than its poorest part. The quality of leather varies, and unless each belt is carefully graded, dissimilar qualities get into the same belt. Rigid grading is uniformity. Grading should be done by expert judges of belt leather quality, according to fixed standards.

Why is there such confusion in leather belting grades?

Because many belt makers have not standardized their belts, but give the buyer any kind of belt he demands. The result is chaotic.

What is Standardized Leather Belting?

Simply belting that is standardized to meet the needs of the different classes of power transmission—instead of being made to meet theoretical specifications. Transmission requirements can be classified into a comparatively few groups, and there is a standardized belt to fit each one. Standardization can be applied to belting just as to any other type of machine part or product. It is common sense in belting.

How does Standardized Leather Belting help the belt buyer?

It insures the selection of the proper belt required to speed up machines, to maintain production, to reduce operating expenses, which cannot be accomplished unless the belt user gets the maximum power through his belts. Standardized leather belting effects this for him and enables him to know that he is getting the right brand for highest efficiency and greatest economy—maximum service from every belt and every drive.

How does it work?

Let a Graton & Knight representative make an analysis of your belting requirements. Then get the standardized belt for your work, ordering your belting by work to be done rather than by specification. There is no obligation—there may be a great saving for you.

*The Babbitt Metal that's at the Front in Efficiency
and Economy*

HARRIS HEAVY PRESSURE

Being heavy Munion Makers, we appreciate information as to where the best Tools, Steel, Belting, Lathes, Furnaces, etc., can be obtained, the object being to get the best results in our work and we are pleased when manufacturers put us right. For the same reason we respectfully bring before you, Harris Heavy Pressure Babbitt Metal, knowing it to be the best that money or brains can make for all-round Machinery or Shafting Bearings. We emphasize this as we know you appreciate the word of a reliable Firm. Years of service to the public of Canada prompts us to give the results of our knowledge of this Metal's qualities; it being both durable and moderate in price.

We Manufacture All Grades of Babbitt Metals.

Chemicals

A Profitable Industry For Lumbermen

There is a handsome return on any investment in the chemical industry—particularly in the manufacture of those chemicals which we heretofore imported from Germany.

The industry is particularly attractive to lumbermen as many valuable chemicals are obtainable from wood waste by our complete wood distillation and chemical plant.

We Manufacture the Following Well Known Brands

“Elkco Special,” “Elk Steel,”
“St. Marys,” “Keystone” and “Rotex”

FIRE BRICK

Each brand is specially suited to a separate use. We have the experience to manufacture and supply the finest grade of Fire Brick for the varying uses of the Lumber Industry. The same brick may not meet the requirements of your Dutch Oven and of your Refuse Burner.

This is a product that should have your most careful attention. When so much depends directly on the successful operation and dependability of Fire Brick in your plant, it will repay you many times to make a most careful investigation before the installation. Let us show you where our product has been successfully used for years. Let us suggest a special brand for your particular purpose.

We have an interesting catalogue that will be sent you. It will give you an insight into the proper methods of Fire Brick construction.

LOCOMOTIVES

Locomotives on trunk line railroads have the advantage of the best facilities for inspection and repairs.

Logging locomotives face different conditions. They must work day after day in the hardest service, and often in localities where repairs cannot be made without great inconvenience. That is why we build our logging locomotives from interchangeable stock parts. With this

system every part must fit every other locomotive of the same size and design, and long delays waiting for duplicate parts are avoided. Interchangeable parts kept on hand at our Works for prompt shipment

BRANTFORD, ONTARIO, CANADA

"FROST KING" METAL

Our thirty-five years experience in metal mixing enables us to place on the market a babbitt that we believe to be absolutely perfect. For high speed machinery and engine work it is without an equal. It is specially designed for saw-mills, planing mills, threshing engines, traction engines, pumps, rolling mills, pulp machinery, and all classes of stationary engines. It is a high grade metal made of the very best selected stock, and carefully compounded.

If your dealer does not stock FROST KING send us a money order for your requirements. Price 30c per lb., Fort William and East; West of Fort William 35c per lb., delivered nearest railway station; packed in 30 lb. and 60 lb. boxes.

For extra duty, such as over-hanging saws, our TROJAN BABBITT will stand where all other metals will fail. Price, Fort William and East, 65c per lb.; West of Fort William, 70c, delivered to your nearest railway station; packed in 30 lb. and 60 lb. boxes.

\$5,000,000.00

worth of mixed metal
sold annually.

Prescott's Valve Controller

Patented June 8, 1915.

The Machine You Have Been Waiting for.

To eliminate every trouble with your Steam Feed Valves install one of these machines.

Six Real Reasons for Doing So :

- 1—Gives the sawyer the easiest kind of control of valve.
- 2—Hand lever stays put, making them safe against any jerk or kick of valve.
- 3—Gives the sawyer every confidence in handling valve.
- 4—Will prevent accidents—is easier on the nerves and carriage runs steadier.
- 5—Water flowing into valves from foaming boilers does not fret the sawyer.
- 6—This relief from all troubles of which sawyers have complained enables them to give closer attention to the logs they are cutting and a better inspection of the lumber they produce.

Read what one of the largest lumber companies on the north shore has to say about it.

We are sole Canadian manufacturers of these machines.

Pamphlets with full description and prices on application.

Let us quote you also on our new "Hamilton" Vertical Steam Feed Valves.

WHAT IS IT ?

PRESCOTT'S VALVE CONTROLLER

Waubushene, Ont., Sept. 11, 1917.
Messrs. Wm. Hamilton Co.,
Peterborough, Ont.

Gentlemen:—

Replying to your inquiry re Prescott Valve Controller, which you sent us last spring to try out: I beg to say that we installed this machine early in April, just previous to starting the mills, selecting the most difficult valve we have to handle, the steam having to travel through nearly three hundred lineal feet of pipe to reach this valve, and noting the fact that the pipes are well covered, there is necessarily considerable condensation, and every sawyer knows the annoyance caused by water passing through the valves which violently jars or jerks the lever, sometimes wrenching it from the hand and thereby inflicting serious damage to the machinery of the mill. And now after nearly five months of daily use, I am pleased to tell you that this device has put up all that is claimed for it. There is not the slightest jar or vibration to be felt, no matter where the lever is held. It is very easily attached and does not interfere in any way with the free movement of the lever, and the Sawyer, Mr. George Botting, also our Foreman, Mr. W. A. Gill, both speak of your controller in the most glowing terms. I can, therefore, congratulate you on securing an article that will fill many a long felt want.

Yours truly,
(Signed) D. B. Anderson,
Chief Engineer,

"Well Bought is Half Sold"

We begin 1918—a new organization with an old experience.

We will distribute Graves, Bigwood & Co.'s

products and other well
known lines as presented
in this space heretofore.

We will offer regularly hereunder varied and interesting items. As a statement of our position please read this extract from the Canada Lumberman:

Old Wine in New Bottles

The incorporation of the Canadian General Lumber Company, Limited, formed to deal in lumber and other forest products, with its head office in Toronto and an eastern office at Montreal, is one of the latest announcements of interest to the trade. While this is a new concern, its personnel is of long acquaintance in the lumber business. It constitutes rather a realignment and extension of efforts and undertakings that are not new. In a sense, its reputation is established.

When in 1908 the Canadian Pacific Railway opened its Toronto-Sudbury line, Graves, Bigwood & Company, in the rail access given to their mills at Byng Inlet, seized the opportunity to develop a car business direct from the mills and to increase the intimacy of their acquaintance with the retail trade of Eastern Canada and the Northeastern States. To successfully serve, they established large sorting facilities and a well-equipped planing mill. To utilize their lower grades and trimmings they installed a modern box shook factory. These facilities, their splendid manufacture, careful grading and service, brought speedy recognition by purchasers and each year an increased clientele.

The allied interests of Graves, Bigwood & Company had long been known as purchasers of mill cuts in Canada and the Michigan and Minnesota sections. It followed as a natural sequence to meet the activities of their sales force that Graves, Bigwood & Company should supplement their own stock with well-known lines to which they had entree. As a result, they have drawn on all the sawmill sections of Ontario, Quebec, and New Brunswick. In 1910 they started an operation at Deer Lake, Ont., on the C.N.O. Railway, to cut hardwoods. Thus they joined themselves to that field, and hardwoods have become a feature in their business.

All of this history is antecedent to and explanatory of the new organization. In order to give increased scope to the selling force and extend the merchandising features it has been decided to divorce the sales from the manufacturing end of the business. The Canadian General Lumber Company, Limited, has therefore been organized. Its personnel is well known, and in addition to certain of the principals of Graves, Bigwood & Company, includes the prominent members of that company's sales force. The directors are: A. C. Manbert, president; W. E. Bigwood, vice-president; H. I. George, treasurer; J. L. Macfarlane, secretary; F. H. Bigwood, general sales; F. V. Wilson, Ontario sales; C. Villiers, eastern sales.

Canada, United States and Great Britain, \$2.00 per year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.
Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

Vol. 38

Toronto, January 15, 1918

No. 2

The U.S. Three Per Cent. Freight Tax

One of the measures adopted a few months ago by the United States Government for raising special revenues to meet the expenses of the war was the imposition of a tax of 3 per cent. upon freight bills. The measure is so worded that on all shipments between two points in the United States a 3 per cent. tax is collected upon the amount of the freight bill. There was some uncertainty at first in regard to the effect of this tax upon shipments of United States lumber to Canada and vice versa. Shippers and consignees were in doubt whether this would involve a tax upon United States stocks coming to Canada, and, if the tax were imposed, whether it would cover only the freight charges to the international border or the whole of the freight charges to destination in Canada or vice versa. That this uncertainty existed not only in the minds of shippers and consignees, but also in the minds of railway officials is shown by the fact that bills for freight charges upon shipments from Canada to United States points have been presented which included the 3 per cent. tax upon the whole freight charges from the shipping point in Canada to the destination in the United States. Canadian firms naturally felt that the United States authorities were overstepping their rights in imposing a tax upon the portion of the freight bill earned by Canadian roads in Canada, and they made enquiries. It has now been ruled by the Treasury Department at Washington that such charges had been made improperly. The ruling, indeed, goes much further than exempting the Canadian portion of the freight charge, as it provides specifically that on shipments made on through bill of lading between a point in Canada and a point in the United States, travelling in either direction, the 3 per cent. tax cannot be imposed.

This ruling has been reported to Canadian firms by the National Wholesale Lumber Dealers' Association of the United States, and it will be welcome information to all who are engaged in the trade in lumber between the two countries. There is still another important and interesting point in connection with this matter. Although a shipment from a United States point to a Canadian point on through

bill of lading will escape the tax, a shipment passing through Canada on a United States line of railway, from one United States point to another United States point, will be subject to the tax on the complete freight charge, including that which is earned by the United States railway while running over its lines in Canada.

Organized Co-operation Produces Results

The value of organized co-operation among members of the lumber trade has been strikingly illustrated during the past year by the developments which have taken place in Toronto, a number of which have been connected in one way or another with the work of the Lumbermen's Section of the Toronto Board of Trade. Those who were responsible for the formation of the Lumbermen's Section a few years ago had in mind developments of a nature somewhat similar to those which have actually taken place. The interesting fact, however, is that out of the simple getting together in the first place for the purpose of holding weekly luncheons, there has grown up among the trade in Toronto not only a degree of co-operation and confidence which could not have been accomplished in any other way, but also constructive organization of the various elements of the trade, which can now work in harmony with one another in pressing for reforms and adjustments of trade grievances, with a feeling that there is a fair possibility of obtaining their object whenever they have a good case to present. This is a long way to have travelled in the course of two or three years, and it holds out encouraging promise of greater results in the future.

At the annual meeting of the Lumbermen's Section of the Toronto Board of Trade, which took place recently, these points were dwelt upon at some length by two speakers, who have been privileged to represent the section during the past year. One of these—Mr. J. L. Campbell, representative of the section upon the council of the board—impressed upon the members the fact that they had actually become an important force in the work of the board, and had assisted materially in dealing with matters which the board took up from time to time. In addition to this, as a section, they had had all the moral and material support of the board behind them in pressing their own claims for improvements in legislation regarding freight over-charges, and in opposing the proposal of the railway companies to increase the minimum freight rates upon carloads of lumber. In other days the lumbermen, working individually, would have been unable to effect anything along these lines, and it is no exaggeration to assert that the increased minimum freight rates proposed by the railway companies would have been imposed upon the lumber shippers. The influence of the Board of Trade in supporting the claims of the lumbermen relating to these matters had been of the greatest possible service to them, and had combined with the influence of other organizations of lumbermen so effectively that there had been nothing for the railway commissioners or the government to do but comply with their suggestions. The securing of the new minimum freight rates was, in fact, a victory for organized lumbermen in Toronto, Ottawa, Montreal, and elsewhere, and was in itself of sufficient importance to justify all the efforts of the various organizations in the direction of bringing about co-operation.

Regarding the Board of Trade itself, Mr. Campbell, after serving upon its council for one year, has had his eyes opened to the great value of such an organization, and has not been backward in impressing this fact upon his fellow-lumbermen. Like many individuals who had not previously been in close touch with the interior workings of the board, he had not been impressed by his effectiveness in looking after the interests of the public. No blame for this is to be attached to the board itself. It is an inherent characteristic of such bodies that they should to some extent hide their light beneath a bushel. It seems, in fact, like the censorship in connection with the reports of military affairs, to have some justification in actual results, as the board is thereby enabled to work out its plans quietly and effectively, and probably with greater prospect of success. As a member of the council of the board, Mr. Campbell was struck with the good results secured

and with the wide field of work covered. His report upon it is that the Council of the Board of Trade, while working pre-eminently for the promotion of the interests of its own members, becomes a factor in the promotion of the interests of the general public, not only of Toronto, but of the province and the whole Dominion. It is on account of this wide field of influence that the moral backing of the board is of such value to the Lumbermen's Section, and the members of that section have during the past year had definite reason for appreciating their good fortune in becoming an integral part of the board, a body which, as Mr. Campbell remarked, owes much of its success and influence to the fact that its members work in the public interest from a sense of duty, entirely without remuneration, demonstrating in this manner the truth of the fact that good service can be more certainly secured from the unpaid efforts of public-spirited citizens than from the work of paid officials.

The scheme of organization in the lumber trade of Toronto may now be considered to have been satisfactorily rounded out upon a working basis, and better results even than those of the past two years may be expected in future. This scheme includes representative bodies to deal with matters of interest to each section of the trade and a general body to attend to matters of general interest to all members of the trade; this general body—the Lumbermen's Section of the Board of Trade—being backed up by the influence of the board itself. It is beyond question that the continued co-operation of the members of the trade in the work of these separate organizations is all that is necessary to protect and develop the interests of the whole trade.

Cost Accounting a Big Association Problem

It is interesting to note how closely the lumber trade association developments in Canada are following upon those which are taking place in the United States, and even in some cases preceding them. There seems to have grown up among the branches of the trade during the past few years a great wave of organization, which is covering all the practical fields of importance and which may be accounted for to a large extent by the trade conditions which have arisen out of the war. These conditions have demonstrated to the trade that in the past they have been neglecting many opportunities for doing themselves important benefits by associating together. Whatever may be at the bottom of the progress that has been made, the striking fact is that it is of a widespread nature, covering the trade in all its branches and extending practically over the whole of North America. In some matters the associations in the United States are showing the way to those of Canada, and in other matters the reverse is the case.

One of those matters in which we have yet to follow the lead which is being given us in the United States is that of cost accounting. Take the retail trade, for instance. Nearly every retail lumber dealers' association in the United States to-day is, in one form or another, studying this all-important question. Some of the associations have reached the stage of having worked out practical methods of cost accounting based upon individual results from long experience and are already applying these methods. Others are still in the preliminary stage of study, gathering statistics which will lead up to the adoption of uniform cost accounting systems. While it is probably not practical to harmonize all these systems so as to establish one which will apply in all parts of the country, it is already becoming apparent that there is an underlying principle common to them all, which, with variations, is the foundation for the working out of each.

Reference to this is made with the object of impressing it upon retail lumber dealers' associations in Canada, so that, in those cases in which the cost accounting problem has not yet been taken up as an association matter it may be made the subject of investigation as soon as possible. Cost accounting is probably on the same footing as credit regulation, so far as its importance to successful business is concerned. These two problems are the outstanding ones which should be taken up by associations and kept before them continually. Upon them will depend the success of the associations and the prosperity of their members. We hope that the association of retailers recently formed in

Ontario will lose no time in making a thorough study of both cost accounting and credit regulation. So far as credits are concerned, the method of operation has already been worked out by other organizations, and it is only necessary to adopt the standard methods. The cost accounting problem, however, is one that will require the study of dealers of long experience for a considerable length of time and over a wide field. Therefore, it should be dealt with immediately, in order that the principles found to be practical and necessary may be put into effect as soon as possible.

Perhaps it is not necessary to dwell at length upon the importance of this matter, as everyone knows that cost accounting must be responsible in large measure for his business success or failure. It is necessary, however, to educate the trade to a full appreciation of the fact that this is a matter for an association to deal with, in order that methods may be standardized, thus clearing the way for the adoption of a system which will make it possible for each dealer to study his results in comparison with those of others, and to know the effect of each detail of his business upon the progress of the whole. The old days of slipshod cost accounting methods are past. Operating costs are so high to-day and competition is so thorough that it is not safe to imagine that one's business is successful just because stock is being sold for more than it seems to have cost. What it has actually cost the dealer when it has been delivered to the customer is the thing which, above all other things, must be known.

The delivered cost, of course, is quite another thing from the delivered price. Between these two lies the dealer's profit, and it is upon the delivered price, not the delivered cost, that the percentage of profit should be calculated. In other words, a man should know how much of the delivered price is profit, not what per cent. added to the cost is profit. This is one of the elementary truths that have been developed of late years by associations, and it is being hammered home by all retail lumber dealers' associations which are making a study of cost accounting. Once a dealer has got this fact clearly fixed in his mind much of the battle has been won, and he may be counted upon in future to be a convert to the belief that uniform cost accounting methods can be worked out among members of the trade, and should be worked out and adopted in order to promote the best interests of all dealers. Modern business is based upon the survival of the fittest, and the fittest man in any business is the one who figures his selling price upon a definite knowledge of cost and a scientific understanding of the amount of profit required in order to be safe. The spread of knowledge on this subject is the only sure means of putting an end to cut-throat competition which leads inevitably to bankruptcy. A number of dealers who know how much their goods and their work cost may be counted upon never to cut prices below the margin of safety. There is no need to go beyond this. Combination in order to maintain prices is both unsafe and unjust, but co-operation to prevent prices from sinking below the known cost is quite another matter, and is being recognized by individuals and governments as the great safeguard of national prosperity.

For these reasons it is important that the retail lumber associations in Canada should give their thought to this matter and go through with this study to the end. In order to do this they must have the largest possible measure of backing from the members of the trade. Those who already belong to the associations can be counted upon to give their co-operation to a large extent. But those who, in the past, have not co-operated in association work should realize that they benefit from the improved conditions brought about by associations, and that it is their duty, as progressive business men, to cast in their lot with the associations and help them in all their problems.

The Minister of Lands and Forests of the Province of Quebec has under consideration the organization of a permanent museum of the various forest products of the province, with a view to making the public more familiar with the importance of the lumber industry. This will include all products that manufacturers obtain from their raw material. In addition to the permanent museum, several exhibits will be prepared for show in parts of the province at local exhibitions.

Annual Meeting of Toronto Trade

Lumbermen's Section of Board of Trade Reports Successful Year—Officers Re-elected

The annual meeting of the Lumbermen's Section of the Toronto Board of Trade was held on Friday, January 4th, Mr. J. B. Reid occupied the chair and there was a good attendance.

On motion of Mr. A. E. Gordon, seconded by Mr. C. W. Wilkinson, it was decided that the Section should hold its annual dinner on Friday, January 25th, and that the committee, consisting of Messrs. A. E. Clark, W. F. Oliver, A. K. Johnson and H. Boulton, which had charge of the dinner last year should be re-appointed for this year's dinner, with power to add to their numbers.

On motion of Mr. W. J. Lovering, seconded by Mr. C. W. Wilkinson, it was decided to re-elect last year's officers for 1918. These consist of the following:—Chairman, J. B. Reid; vice-chairman, A. C. Manbert; secretary-treasurer, H. Boulton; committee, A. E. Clark, A. K. Johnson, W. F. Oliver, H. J. Terry and Hugh A. Rose. The election of representatives of the Section in connection with the annual elections of the Board of Trade was then held, and resulted as follows:—For representative upon the Council, Mr. J. L. Campbell; for representative to the Canadian National Exhibition, Mr. J. B. Reid; for representative on the Board of Arbitration, Mr. A. E. Eckardt. The same members were nominated a year ago and successfully elected at the Board of Trade elections. It is hoped that all members of the Section will work hard for these representatives at the approaching elections of the Board, which takes place on January 24th.

Mr. J. L. Campbell, after being re-elected as representative for election to the Council of the Board, expressed his appreciation of the honor. He believed that the Lumbermen's Section of the Board of Trade, during the past year had been a force in the work of the Board, and had assisted materially in dealing with matters taken up by the Board from time to time. As an instance of this he referred to the matter of repayment of freight charges illegally collected by the railway companies. This question had been brought up by the Lumbermen's Section and pushed as far as possible. The Section had made its representations to the Board and the Transportation Committee of the Board had taken the matter up at Ottawa, and succeeded in securing a proposed amendment to the general railway act which seemed to cover the particular point the lumbermen were fighting for. Unfortunately the House of Commons had prorogued before the railway act could be taken up.

Another matter which the Section had dealt with was that of minimum carload weights. He had been informed that the new minimum weights recently ordered by the Board of Railway Commissioners for Canada had gone into effect on January 1st. The securing of these new minimum weights was a victory for the shippers. The Lumbermen's Section of the Board of Trade, and the Board of Trade itself, while they did not claim exclusive credit for this success, had had a great deal to do with bringing it about. He did not know that any single body could have accomplished what was accomplished, but the united efforts of the several bodies interested had brought about what could not have been effected otherwise.

In regard to the business that is brought up before the Board of Trade, Mr. Campbell said he had been astonished beyond measure to learn of the great variety and the multifarious nature of the business brought before that body. They seemed to him to be the watchdog for the public interest, not of Toronto alone, nor even of the province of Ontario alone, but of the whole Dominion of Canada. The men composing the Board of Directors gave their time and thought to promoting the welfare of the people of Canada, without any remuneration whatever beyond the knowledge that they were working for the interests of the people. No one outside of the Board could appreciate the amount of energy and deep thought that the members of the Board gave to all their problems. It was a striking example of the fact that if you wanted public business done properly you could get it done better, more efficiently and more honestly by men who served for the honor of the position, than if they were serving for the payment attached to it. In conclusion Mr. Campbell reaffirmed his appreciation of the confidence placed in him by the members of the Section.

Mr. J. B. Reid, re-elected chairman, of the Section, also expressed his appreciation of the honor the members had done him and of the assistance they had given him during 1917. The Section had now arrived at a stage which he thought was very near perfection for a lumber Section of the Board of Trade. It had been instrumental in bringing about the formation of the wholesalers into an organization to deal definitely with their own problems. The retailers also had been gathered together in a similar manner, and in future the Section would probably not meet so often as formerly, but would always be ready, at the call of the chair, to discuss any matters of general importance that might turn up.

On motion of Mr. W. J. Lovering, seconded by Mr. A. E. Clark,

it was decided that the Section should hold monthly meetings in future, unless special meetings were required.

Western Retailers Planning a Fine Meeting

The twenty-seventh annual meeting of the Western Retail Lumbermen's Association will be held at Winnipeg, January 23, 24 and 25. The Coast, mountain and northern mills will have representatives at the meeting. Between 400 and 500 delegates are expected to be present, among the prominent speakers being Tom Whitten, of Trenton, Mo.; W. B. Lanigan, of the Canadian Pacific Railway, Winnipeg; and representatives from the National Lumber Manufacturers' Association. A representative from the West Coast Lumbermen's Association—J. S. Williams, its secretary, who has charge of the "Rite-Grade" shingle inspection in both Washington and British Columbia—will give a demonstration of the fire-retarding qualities of cedar shingles as compared with composition roofing. There will also be a movie dealing with the manufacture of shingles, and Mr. Williams will deal fully with the manufacture, handling, advertising and sale of shingles. Other important subjects to be discussed at the convention are: "Barn Ventilation as Selling Proposition," "Community Development," "Co-operation a Necessity, Not a Fad," "How to Reduce the Cost of Lumber to the Consumer," and "Conditions in Manitoba." President F. J. Carpenter, of Yorkton, Sask., and Secretary N. G. Neill, of Winnipeg, will present their annual reports on work of the association. The Fire Insurance Company of the association will also hold its annual meeting during the third day of the convention. The Retail Lumbermen's Purchasing Agency will also meet.

Opposing the Freight Rate Increases

The Winnipeg Board of Trade has appealed direct to the Dominion Cabinet against the decision of the Board of Railway Commissioners for Canada in the matter of granting the increased freight and passenger rates to the railroad companies. According to A. E. Boyle, secretary of the Winnipeg Board of Trade, the new decision, if allowed to stand, will compel the public to pay from \$30,000,000 to \$40,000,000 per annum more to the railroads. The Winnipeg Board of Trade has already wired a protest to the Acting Premier and other members of the Dominion Cabinet. The Shippers' Section of the Regina Board of Trade, after discussing the increase, decided to wire to the Winnipeg Board of Trade suggesting that pressure be brought to bear upon the Dominion Government to induce it to take over the railways of Canada as has been done in the United States.

Annual Meeting of C. L. A. on February Fifth

The tenth annual meeting and banquet of the Canadian Lumbermen's Association will be held in Montreal, P.Q., on Tuesday, February 5th, 1918. The Windsor Hotel will be headquarters, and the convention will commence there at 10 a.m. The following is the committee on arrangements, and matters are well in hand: Mr. W. T. Mason, Montreal, chairman; Mr. W. Gerard Power, St. Pacome, P.Q.; Mr. Arthur H. Campbell, Mr. Geo. W. Grier, Mr. E. H. Lemay, Mr. D. M. McLennan, Mr. W. G. Rutherford, and Mr. Geo. C. Goodfellow, Montreal.

The present indications are that there will be a large attendance and a splendid meeting.

Death of Mr. Jesse Tilley

The death took place at Hamilton on December 27th of Mr. Jesse Tilley, of the Patterson-Tilley Company, retail lumber dealers. Mr. Tilley, who had been ill for about three months, had been associated with Mr. Patterson, first as bookkeeper, and latterly as partner, for thirty years. By his death the lumber trade of Hamilton and of Ontario loses one of its most respected members.

B. C. Statistics for 1915 and 1916

Comparisons of the value of lumber sales in British Columbia as between 1915 and 1916, as submitted under the provisions of the Timber Royalty Act, show a large increase, the figures being \$9,307,408 and \$15,012,050, respectively. Lumber cut in 1915 totalled 1,017,683,000 feet, board measurement, while in 1916 the total was 1,280,263,000 feet. While there was a great difference in the output, sales were greater, the total for 1915 being 747,096,170 feet, as against 1,010,427,819 feet in 1916. Prices were also higher in 1916, the increase being \$2.40 per thousand feet in 1916 as compared with the year previous, the respective prices being \$14.86 and \$12.46.

A report received by the Canada Lumberman from a wholesale firm in Buffalo, N.Y., states that the New York Central has placed an embargo on all shipments into Buffalo until further advice.

The Enquiry Corner

Answers to Questions by Readers
Can We Help You?

Switching Charges at Toronto

Editor, Canada Lumberman:—

Boston, Mass.

In your issue of May 15, 1917, you published an article regarding the C. P. R. making new switching charges at Toronto. Can you advise us if the Board of Railway Commissioners for Canada has held a hearing on the question involved, and if so, if it has rendered a decision?—The Atlantic Lumber Company.

The C. P. R. regulation referred to in our issue of May 15th regarding switching charges at Toronto, is still in effect. Under this regulation, Toronto, West Toronto, Parkdale, North Toronto, etc., are considered as separate billing stations. Traffic consigned to one of these so-called terminal stations and then ordered to be placed for delivery elsewhere in Toronto is assessed, reshipped or reconsigned, switching charges ranging from \$2 to \$6 per car. A protest against this was made at the time, to the Board of Railway Commissioners for Canada, but nothing has yet been done by the Board in this connection.

Machinery for Barking Railroad Ties

Editor, Canada Lumberman:—

Toronto, Ont.

We want to get some information with reference to machinery for use in barking pole cross ties, that is, ties which have been sawn on two sides, leaving bark on the two edges. We will appreciate any information you can give us regarding the makers of such machinery.—The Canada Creosoting Company, Limited.

Enquiries have been made by the Canada Lumberman upon this question. Machinery at present on the market seems to be solely for use in the pulpwood industry. The best information obtained is from the Waterous Engine Works Company, Limited, Brantford, Ont., who say that they have made considerable investigation to find out where such machinery is being used. All they found was that the barking of such ties is done by hand. "Machines which were tried for this purpose," they say, "were an utter failure. The only success which we know of is to bark the tree in its entire length and then cut the ties. The barking of the entire tree is done on a machine which is patented by the Brown Corporation, of La Tuque, P.Q. If you mark your logs before cutting, the slabs are then ready to be used for sulphite chips. As far as we know, there is no other machine on the market for barking 16 ft. logs. There is one machine being built in Sweden for small logs about 4 or 8 ft. long and 3 to 4 inches in diameter, but this machine would not be suitable for your purpose."

The Wm. Hamilton Company, Limited, Peterboro, Ont., who are extensive manufacturers of barking drums, have also furnished information regarding some of their barkers, which they believe will meet the requirements of the Canada Creosoting Company. They state that the longest log that they have barked in any of their drums is 48 inches.

Naval Lumber Specifications

The Editor of the Canada Lumberman recently received a request for assistance in revising the schedules for lumber and timber used by the Canadian Department of Naval Service. The specifications at present used are based chiefly on British Admiralty schedules and are rather fragmentary and unsuited for the Canadian trade.

After submitting the schedules to a number of lumbermen of wide experience, the Editor of the Canada Lumberman has written to the Department of Naval Service, giving them the following quotations from letters received:—

"We would suggest having the pine specifications read as follows:—

"The timber to be cut from green logs and the lumber manufactured to be cut from green logs and the lumber manufactured from same to be properly seasoned, to be well manufactured and of a merchantable grade free from bad knots, shakes, wane and stain. Thickness to be not less than the sizes given, to be supplied in lengths of 10 feet and upwards, averaging 14 feet, the widths to be as specified in the inquiry.

"Specification for pine and white wood for pattern making:—Lumber to be known as a grade of good sidings and be free from shake; to be 8 ins. and wider, 10 ft. and longer; the inch lumber to average at least 9½ ins.; the 1½ in. and 2 in. to average 10½ ins. or more, and say 3 in. lumber to average 12½ ins. or more.

"Specification for Spruce:—The spruce timber to be sound quality,

well manufactured, free from injurious knots and of a merchantable grade, not to include red heart, splits or barkey edge.

"Clear spruce to be practically a clear and clear face; that is, the lumber to show one clear face which might include one pencil knot.

"No. 1 or merchantable spruce to be free from large or unsound knots, rot, wormholes and wane, to be sawn fully to the sizes named; warped, twisted or badly manufactured stock will not be accepted. Sound knots not exceeding 1¼ in. in diameter in boards 1 inch to 2 inch in thickness and not exceeding 2½ inches in diameter in deal, 3 inches in thickness and up, the thickness to be not less than the sizes given in the order, to be cut square, supplied 10 feet in length and upwards and widths as specified in inquiry."

"Specifications for Birch:—We would suggest that this be made to read Canadian Birch, Yellow, Black or Red Birch, to be six feet and up long, purchases to be made on standard grades of inspection as outlined by the National Hardwood Lumber Association, and that copies of this inspection be furnished to the Department.

"These remarks in regard to the question of birch would also apply with regard to elm.

"As to the question of oak, mahogany and teak, of course, these woods could not be called Canadian, but we would suggest that the specification of the National Hardwood Lumber Association Rules should also apply on these items.

"As to the specification for fir, we would suggest that this specification read as follows:—Timber to be good live stock, free from rot or unsound knots and shakes and to be known as the quality which is handled by the trade in Canada under the caption of merchantable grade."

Inasmuch as the Department has this subject under consideration, the Canada Lumberman will be pleased to hear from any other lumbermen who can give useful advice upon this matter.

Wholesale Lumber Dealers' Association Incorporated

The Wholesale Lumber Dealers' Association, Incorporated, which has been organized at Toronto, completed its arrangements for commencing work at a meeting held at the Albany Club on January 11. The provisional board of directors reported that they had secured the charter incorporating the association from the Secretary of State at Ottawa. This cleared the way for the election of officers and the commencement of business. The officers were then elected as follows: Chairman, A. E. Clark, of Edward Clark & Son, Toronto; directors, A. C. Manbert, of the Canadian General Lumber Company; H. J. Terry, of Terry & Gordon; C. W. Wilkinson, of the Union Lumber Company, and A. E. Eckardt, of the R. Laidlaw Lumber Company. The board of directors subsequently appointed Mr. H. Boulton secretary-treasurer.

The various operating details of the association were thoroughly discussed, and arrangements were completed for commencing operations immediately. A more complete report upon the plans of the association will be available for a subsequent issue of the Canada Lumberman.

Already a sufficient number of firms have agreed to become members to ensure the success of the association, and the indications point strongly to its covering the wholesale trade of Ontario thoroughly and including a number of firms in other parts of Canada and in the United States which sell to the trade in Ontario and Quebec.

Lumbermen's Credit Bureau Annual Meeting

The Lumbermen's Credit Bureau, Incorporated, held its annual meeting at Toronto on January 11. The business consisted chiefly of the election of officers. Last year's officers were all re-elected. The bureau has now increased its membership to 33, which includes 18 retail lumber firms and 15 builders' supply firms. A successful year's work was reported, all members being well pleased with the service the bureau had given them.

Von Alvensleben's Timber to be Sold

The case of the Red Cliff Land & Lumber Company vs. Alvo von Alvensleben has been before the British Columbia courts for almost two years, but the end is now in sight. Alvensleben, a German of high lineage, who was in business in Vancouver, is now interned at Salt Lake City, having been located at Seattle for many months immediately previous to the United States entering the war. In 1911 he bought a large area of timber from the plaintiff company, the purchase price of which was in the neighborhood of \$2,200,000. At the outbreak of the war there had been paid \$1,700,000, and the original action was for foreclosure because of the final amounts owing under the agreement and also for interest. The application for foreclosure was abandoned because it would have been in the nature of a forfeiture, and the action just decided was for a declaration of amounts due as a first lien against the property; that the property should be sold and that the plaintiffs should be permitted to bid on it at the sale. This the court allowed.

Spruce Cut-up Plant for Airplane Timbers

The United States Government has decided to build a cut-up plant at Vancouver, Wash., for the purpose of working flitches of spruce to the sizes and forms required by the aircraft-production industry. The practice up to date has been to ship the heavy timber to the aircraft plants. This involved much useless correspondence, freight bills and wasteful conversion of the spruce at the aircraft plant. The decision to operate a cut-up plant was reached recently and has been announced by Col. B. P. Disque, who is in charge of the Spruce Production Division of the United States Army's Aviation Section. Flitches will be sent to the plant by lumber manufacturers, and the plant will ship the stock east to the factories ready for use. The portions that do not come up to requirements will be used to advantage in other ways, so that the clear spruce will be an asset on the Pacific Coast end instead of an accumulation of spoiled material on which heavy freight charges have been paid in order to ship it to the factory in the east. Col. Disque expects that instead of getting 167 feet of airplane stock out of each thousand feet of spruce, as in the past, the present programme will produce at least 500 feet out of each thousand. The new plant will be 350 feet x 400 feet, and will use between 800 and 1,000 h.p. secured from nearby power lines. Thin gauge double circular pony saws with motor attached to each saw arbor will be used in preference to bands, and twelve special rigged carriages will be installed. The spruce will pass along from machine to machine of different types to get out the parts of the airplanes for which it is best adapted. The plant will work 300,000 feet per day, using three or four shifts, as may be decided upon later. Labor will be furnished from the ranks of the Signal Corps enlisted men, many of whom have been brought from the east. The plant is to be ready for operation early in February. Its cost is estimated at about \$200,000.

The United States Wooden Vessel Programme

A number of reports have appeared in the press recently regarding the action being taken at Washington, D.C., by the United States Shipping Board, in connection with the programme for the construction of wooden vessels. The reports at present available are somewhat of a contradictory nature, but they indicate that there has been much delay in carrying out the wooden shipbuilding programme, as a result of labor disturbances. One report from Washington states that more than half a million working days have been lost to the government shipbuilding programme through strikes and lockouts. This report is credited to R. B. Stevens, of the Shipping Board. Mr. Stevens reported, however, to the Senate investigating committee, that the situation was now much improved, and that the Shipping Board had put into effect a uniform wage scale on the Pacific Coast and was arranging a similar scale in the east. In order to make the wooden shipbuilding programme a success, Mr. Stevens said, the Shipping Board must double the number of men engaged at present. He reports that there are about 150,000 workers in the various United States shipbuilding yards. Mr. Stevens believes that it will be possible to obtain the necessary additional number of men and reports that active steps are being taken in that direction now.

Efforts to Produce Paper in Australia

At a conference of the Country Press Association, recently held at Sydney, the executives of the various states were urged to take action for a reduction in the number of issues per week of newspapers and other periodicals and a reduction in the size of newspapers. The normal annual consumption of paper in the Commonwealth for these publications is about 100,000 tons. During the first year of the war 70,000 tons were imported; the second year, 60,000 tons; and the third year, 50,000 tons.

Before the war the wholesale price of news-print paper was \$45.41 per ton. The supply came largely from Canada and Norway. American capitalists, however, are largely interested in Canadian mills. The present price of news-print paper, delivered in Sydney, is about \$175 to \$185 per ton. Paper measurement is 80 cubic feet to the ton, instead of 40.

An investigation of the claims of Mr. Campbell, of Queensland, Australia, as to making paper from certain weeds or grasses found in Queensland was suggested at the conference. Mr. Campbell estimates that paper pulp can be reduced for \$34.60 per ton, making it possible to market the paper at Sydney for \$63.26 per ton. Some experienced paper dealers who have been interviewed maintain that such estimates are entirely too low. They say that raw material, if found in sufficient quantities, which they seriously doubt, could not be harvested and transported to the mills and the paper shipped to Sydney at a price that would warrant competition with the imported article. Whatever may be possible under normal conditions, it is stated that the high price necessarily paid for labor and the inaccessibility of supplies, would make the scheme impracticable at present. Two bales

of pulp from Queensland grasses were sent to America recently for a practical test.

A daily paper in Sydney gives an account of paper-making in the State of Queensland. The article states in part: Mr. Joseph Campbell, of Queensland, says that with the necessary plant and the right to make use of the grass products of the Northern Territory, he could guarantee that there would not be another paper shortage in Australia. He says he is convinced, after test under trade conditions of production, that he can turn out paper as good as anything imported, at a little under the present charge for freight alone. The shortage of paper for all purposes—more particularly for the purposes of the printers—is a fact within the knowledge of the trade. In his report to the Country Press Conference, the secretary said that unless there were a speedy end to the war, news-print paper would be very scarce in the Commonwealth after next April. Mr. Campbell, when in Sydney last year, gave some information as to his experiments in the direction of paper production from the native grasses. He was convinced then that he was on the track of a trade success in manufacture, but at the time had not advanced his work far enough to justify him in putting out a business proposition. In the time that has elapsed he has erected a small plant and is producing good quality trade paper. While experimenting for this result he worked along other lines for the discovery of vegetable dyes for the purposes of the printer and for other purposes. He can produce any color of paper that may be required, and the dyes are warranted to stand the tests.

Making a Success of Collecting Accounts

One of the most successful collection managers and credit men that I know gave me the following advice: "If you're really in earnest about gathering in some of those outstanding accounts, constant repetition is the answer."

Little drops of water wear away the hardest stone, and regular systematic billing of your delinquent accounts will sooner or later bring in the "hardest nuts" in the basket. Be diplomatic, use letters or rubber stamps or just plain statements, but—keep them going regularly every week or ten days.

What if your debtor hardly has time to pay before he receives another bill from you? It shows you're in earnest, doesn't it? You don't have to threaten; you can say all the pleasant things you choose so that he can't be offended, but if he receives every week, as regularly as clockwork, your statement, he will be positively assured of two things: First, that you haven't lost the record of his account, and, second, that you're in dead earnest about collecting and he might just as well pay now as later.

What is more, if these bills are sent out under first-class postage you are pretty certain to learn promptly of any change in address, and thus protect yourself against loss by the moving of the debtor.

A great majority of losses can be attributed to the lack of understanding of this principle. Especially is this true of small concerns who do not employ a bookkeeper and who also are least able to stand the loss. As soon as you let the "slow payer" grow "cold" he becomes confident that he can eventually do you out of the money he owes you.

On the other hand, the man who really means to pay his just debts promptly will not be offended at this method of procedure, provided you make it clear that no discrimination is shown and that bills go out regularly every ten days to every man on your books who owes you anything.

Individual cases will differ as to the best method of proceeding and judgment will have to be used as to whether it is best to send the bill every week or ten days apart or a month apart, but whatever you do, make it regular and systematic.

An Indication of Confidence in Canada

A new corporation with capital stock of \$2,000,000, has been formed to take over and operate the business and Canadian plants of the International Time Recording Company, Limited, the Dayton Computing Machine Company, Limited, and the Hollerith Tabulating Machine Company of Montreal. The new company will be known as the International Business Machines Company, Limited, and will have Mr. Thos. J. Watson as president, and Mr. Frank E. Mutton as vice-president and general manager. The incorporation of the new company is an evidence of the confidence which capitalists in the United States have in the industrial future of Canada. All the company's business will be conducted in future under one central management in Toronto, but the branch offices of each company will be continued under central direction in every important city of Canada. The company will employ about 500 people. The combined field force will number 63. The company intends not only to cater to the Canadian business, but to develop an export trade with Australia, New Zealand, South Africa, and South America. The sales managers will be L. A. Davidson for the scale division, and St. George Bond for the tabulator division.

Large New Plant at Prince Rupert

Saw, Shingle and Planing Mills Nearing Completion—Daily Capacity 125,000 Feet and 150,000 Shingles

The plant which is nearing completion at Prince Rupert, B.C., for the Prince Rupert Lumber Company has been designed by the best talent available, and particular attention has been given to efficiency and low operating costs. When completed the plant will include a sawmill, shingle mill, planing mill, dry kiln, and storage sheds, with the possible addition of a box plant later, and will have a daily capacity of 125,000 feet of lumber and 150,000 shingles.

The sawmill is of extra strong construction, 46 feet by 250 feet, two storeys high, and is equipped with machinery of the heavy Pacific Coast type. A log lift is employed for taking the logs into the mill instead of the old type jack ladder, and this particular lift is an innovation, in that it is a double lift, having two sets of cables, the one delivering the logs to the sawmill and the other throwing the logs to the shingle mill deck. A reversible engine of the twin feed type supplies power for the lift, and is entirely independent of the other machinery in the mill.

On the log deck there is a heavy four-arm steam stop and loader down against which the logs are rolled from the lift, and which, in turn, passes them on the Simondson turner. The Simondson turner is of the standard type in use on the Coast, with the addition of an independent skid lift, making it much more flexible than the old type. In addition, a heavy canting gear was installed, to be used in emergencies.

Electrically Driven Set Works

The 40-foot carriage is equipped with four steel head blocks, opening 66 inches, and is mounted on heavy three-wheeled cast steel trucks, running on 90-pound rails, two flat and one V'd. Here on the carriage we find another of the many distinguishing features of this plant—that is, an electrically-driven set works, one of the latest developments in sawmill machinery. In this piece of equipment an electric motor of the ordinary type, by means of an assembly of gears and clutches, transmits its power directly to the set shaft on the head blocks. The whole arrangement forms a self-contained and compact unit, which is quick, powerful, and positive in its action.

This machine is so constructed as to eliminate any possibility of an overthrow in setting out and contains many other distinguishing features that can be appreciated only by seeing it in actual operation. This is the first set works of its kind to be installed in British Columbia.

A 10-foot band mill carrying 16-inch saws was installed to break down the timber for the gang, the edger, and the roller band resaw. Provision has been made for a large gang saw, but this machine will not be put in place until the balance of the plant is in operation.

A set of power transfers will carry the cants across to the gang, and the lumber will deliver from the gang direct to the trimmer table over live rolls.

The edger is 10 by 60 inches, with steam lift on the press rolls and carries five 32-inch movable saws. Here we find another departure from the usual installation in the employment of a mechanical spotter for lining up the lumber in front of the edger. The mechanical or automobile spotter eliminates the heavy lifting or "armstrong" work usually required to get lumber through an edger.

All stock of smaller dimensions (that is, stock up to six inches thick) and up to 40 feet in length passes over a 21-saw air lift trimmer and thence on to the sorting chains, the heavier timbers going down the main line of rolls to the timber trimmer, which is a power feed saw of the steam swing up type.

The sorting arrangement for the green lumber was designed to meet special conditions and requirements, and consists of two lines of sorting chains, extending at right angles to the mill building, and between which is located the re-manufacturing plant. The sorting chains are 200 feet in length, and the re-manufacturing plant extends practically the entire length of these tables. After passing through the automatic trimmer the lumber drops onto a set of live rolls and delivers to the first set of sorting chains. Such lumber as is stocked in the rough is pulled off along the outside of this line of chains and made into units, to be taken to storage or delivered to the cars or boat, as the case may be.

Along the opposite side of this sorting table or between the two tables, in the space designated as the re-manufacturing plant, are located the 10-inch horizontal roller band resaw, the pony edger, the shiplap machine, and the ready sizer, each equipped with steam jump rolls and power transfers for delivering the stock to the respective machines. The roller band resaw has transfers on both sides of the feed table, making it very convenient to feed both sides of the band resaw at the same time. The pony edger is the next machine in the re-manufacturing plant, and is located just beyond the resaw, where

split or waney stock or any de-grades developing in resawing may be properly edged and returned to the table. Both the resaw and the pony edger deliver the stock back to the rough sorter, where it is grade-marked and segregated for further manufacture or for distribution to storage or shipping platform.

Dimension and Shiplap Machinery

Both the dimension and the shiplap are manufactured directly from the chains and by machines that will handle the stock in random widths. For making the shiplap, a fast feed, round cylinder machine is being installed, which is equipped with a side-head set works, affording almost instantaneous adjustment of the sideheads to varying widths of stock. This machine handles random width shiplap at 200 feet per minute. Beyond the shiplap machine and at the outer end of the re-manufacturing room is the ready sizer, a machine of well-known make, and one that is usually used where dimension is manufactured random from the sorting table. Both of these machines deliver across to a line of chains on the opposite side of the re-manufacturing room, or to what is known as the dressed lumber sorter. These chains are running in the opposite direction to the first set of chains, and terminate at the charging end of the kilns. All dressed lumber stocked or shipped green is pulled off along the outside of this dressed lumber sorter, while such stock as is to be kiln-dried passes on down the chains to the kiln stackers. All clear stock that requires kiln-drying before dressing passes down the rough sorter to the outer end, where it drops onto a moving belt and is carried across to the second sorter, thence on to the kilns.

The dry kilns will be of crib construction, double tracked, and will be three in number at the start, with ample room for increasing the number. Two of the kilns will handle lumber, while the third will be used for drying shingles.

The lumber will be edge-stacked and run into the kilns lengthwise, which system makes for rapid drying with a minimum deterioration of stock. Edge-stacked lumber comes from the kiln uniformly dry and practically free from checks, warps, and twists, and shows a comparatively small loss in dressing. Ample trackage is provided at both ends of the kilns for storage of lumber on kiln cars, a system of transfers being used to distribute the cars to the different kilns.

Dry lumber coming from the kilns is taken from the kiln trucks by means of a mechanical un-stacker and passed over a system of conveyor or transfer chains to the third (or dry) sorter, where it receives the final grading and sorting. Segregations are here made on both sides of the table, and the units are made up beneath the monorail, where they may be picked up by the hoist and taken to the storage sheds or to the shipping platform.

The storage shed consists of what is known as a four-track monorail shed, and is 90 feet wide by 400 feet long and 40 feet high, being entirely under roof and sided in, so that the lumber is protected from the elements at all times, and is so constructed as to increase the natural draft, thus constituting a rapid air drier. Here the lumber is stored in the original packages or units until it is wanted for shipment, when it is again picked up by the hoist and taken to the shipping platform. This system affords an expeditious and economical method of handling, and makes possible the storage of a very large quantity of lumber on a small ground space.

The monorail is employed throughout the plant for handling and transporting the lumber, a system having been evolved to meet the particular conditions presented. After a thorough investigation and study of the systems in use at the various mills on the Coast, a combination of the monorail and transfer crane was adopted as the best suited to the requirements of this plant. Along the outside of each sorting table is a monorail track, which extends the entire length of the sorters and terminates in a transfer bridge running across the entire plant and yard at right angles to the monorail tracks. Mounted on the bridge is a 30-foot transfer crane, with a monorail suspended beneath, which comes into exact alignment with the stub ends of the various monorails throughout the plant and enables the hoist to pass from one track to another via this transfer crane without releasing its load. This system gives access to any and all parts of the plant and storage with one hoist and without the employment of switches or curves.

Power Plant

A combination of steam and electric power will drive the plant. The sawmill and the shingle mill is each driven by a separate twin engine, while the re-manufacturing machinery, sorting chains, and all other outlying drives are electric. Steam is generated by a battery of four 72 x 18 high pressure boilers, and the electrical energy is fur-

nished by the city of Prince Rupert at extremely satisfactory rates.

In connection with the steam plant is another feature worthy of mention—the fuel storage. The fuel house is adjacent to the boiler-house, and here all sawdust and shavings are collected and thoroughly mixed in the process. A separate conveyor from the fuel bin, passing over the feed holes in the Dutch ovens, feeds the furnaces during the day as well as at night. Mixing the sawdust and shavings in this manner affords a uniform fuel both day and night, and insures an even and constant supply at all times.

The conveyor system over the boilers makes it possible for one man to handle the entire boiler plant on either day or night shift, and does away with the drudgery of shoveling fuel into the furnaces.

Consistent efficiency was the chief aim of the designers of this plant, and successful performance should be their reward. The unlimited supply of virgin spruce, the ample log storage, and the excellent facilities for manufacturing, handling, and shipping make it eminently possible for this mill to produce lumber at a minimum cost.

Mr. J. S. Emerson and Mr. E. F. Duby, who have had long experience in the Pacific Coast lumber business, both in Canada and the United States, are the chief persons interested in the company. The mill has excellent water shipping facilities, and, being at the terminus of the Grand Trunk Pacific Railway, has access to all the inland markets of North America. For the information in the above article we are indebted to the Timberman, of Portland, Ore.

Concrete Vessels Coming to the Fore

Wood and steel are not the only materials making a bid for the construction of ships to meet the world's shortage of tonnage. Cement has its enthusiastic advocates, who are pointing out many points of advantage, such as the unlimited supply, rapidity of construction, economy, durability, etc. We have no space to go into this subject fully, but by way of making suitable reference to an important competitor of wood, publish the following interesting material, kindly furnished by the Portland Cement Association:

The pressing need for ships and the existing congestion in American shipyards have led to a consideration of the possibility of utilizing other materials than wood and steel for shipbuilding. The most promising alternative is undoubtedly reinforced concrete, and already several prominent engineers have turned their attention to its application to the construction of ships.

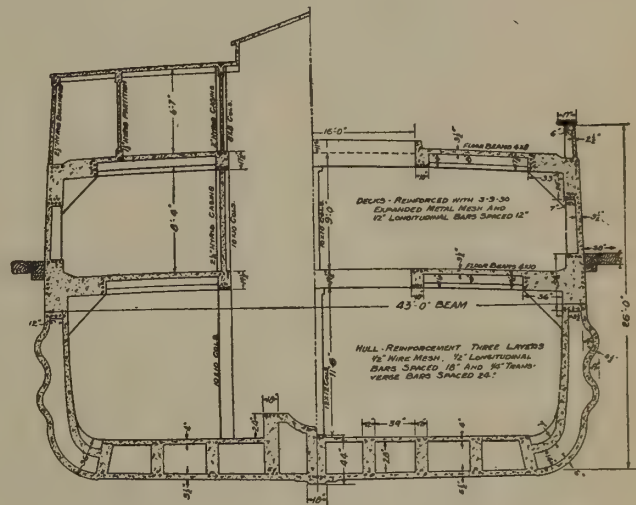

Reinforced concrete ships are not a novelty. In San Francisco a firm of engineers is designing a ship with a length of 330 feet, a beam of 44 feet, and a depth of 31 feet, with a capacity of 4,500 tons, to be built of reinforced concrete. As far back as 1898 a concrete schooner was employed for some years in the North Atlantic coasting trade. The London Times recently mentioned a small boat of reinforced concrete built by a Frenchman in 1849, which is still in service after a period of sixty-eight years. Concrete lighters have been used for the past six years on Chesapeake Bay, supplying coal and water to dredges carrying loads of sand and gravel, etc. A concrete barge has been in service on the Welland Canal since 1910, and has seen very hard usage. It has a length of 80 feet, a beam of 24 feet, and a depth of 7 feet. The walls of the barge, which were constructed between forms, are 2½ inches thick, reinforced with steel rods. The barge has been used for carrying loads of stone, etc., with conspicuous success. Since 1910 reinforced concrete barges have been built for use on various sections of the Panama Canal, and their experience has enabled the engineers to develop a very efficient type of vessel. Recently concrete pontoons were constructed for service as landing stages for boats up to 65 feet in length. These pontoons have a length of 120 feet, a beam of 28 feet, and a depth of 8 feet. They are very thoroughly reinforced.

Vessels which are much more like ships than barges have been built of reinforced concrete in Norway. A report from the American consul-general at Christiania describes a plant at Moss, Norway, where vessels of 3,000 tons displacement are being constructed. At this place a concrete lighter having a displacement of 3,000 tons, which is being built for a mining company at Sydvaranger for the oversea export of iron ore and the import of coal, will be completed before the end of the current year. Two other lighters are now on the stocks, and a large slip for a 4,000-ton craft is nearly completed. More than 200 men are now working in the new yards, and five lighters have been contracted for, in addition to the one completed and the two on the slips.

Front view of the barge "Pioneer" on the Welland Canal.

In view of such examples, proving the usefulness of concrete vessels of this character, the possibilities of constructing seagoing barges or other smaller craft suitable for inland waterway traffic should be carefully investigated, for the substitution of such vessels for existing tonnage would in a short time release for other purposes many ships now used in domestic service. The presence of the necessary materials for building concrete vessels at so many convenient locations, and the ease and rapidity with which they can be built by unskilled labor would

Transverse section of reinforced concrete freighter

seemingly make it possible to provide a large tonnage of such craft in a relatively short time.

Progress in the development of seagoing concrete steamships must necessarily be slow at first, as real information is lacking as to how such vessels will stand up under shocks. Seafaring men who have handled vessels in North Atlantic winter storms or in West Indian hurricanes realize that such information cannot be gained from laboratory experiments. The behavior of actual concrete ships under power in a seaway must be studied.

The Coal Creek Lumber Company

Elsewhere in this issue will be found the advertisement of the Coal Creek Lumber Company, Port Alberni, B.C. R. L. Fraser, owner and manager, is a practical millman and logger, and has operated a small mill successfully for four or five years at Alberni, Vancouver Island, where the finest timber in the province is available. The mill has now been enlarged to 50,000 feet daily capacity, and Eastern Canada buyers who place their orders with Mr. Fraser may depend on fair treatment and reliable grades.

What Will the Future Bring Forth?

Elimination of Inefficiency—Co-operation Among Competitors to Reduce Waste—
Secretiveness to be Thrown Aside

By J. R. Moorehead*

The war is teaching us that co-operation produces greater efficiency than unrestricted competition. Unrestricted competition means only, in the end, the destruction of the weak. If unrestricted competition is to succeed and to be the will of the people and the policy of the government, then there is no opportunity for the success of co-operation, and small business, especially, cannot survive.

The foresighted business men of the country have, for a long time, believed that co-operation, along proper lines, would be not only a benefit to the public, but the salvation of business.

Governments happily are beginning to find this out. The war has furnished the occasion and opportunity for trying out the plan of co-operation, such as could not have been possible under any other condition. The government has found business willing to be supervised, if not absolutely regulated. In truth, the government has become the largest advocate of co-operation in the country. They are leading us in this direction, instead of driving us to unrestricted competition.

Organization Has Come to Stay

Organization has come to stay. The individual is passing. These two facts stand out in every department of activity; the individual cannot stand up against organization.

Something should be done to get the greatest amount of efficiency, through co-operation, injected into the lumber industry. The time will come when the government will say to the business man: "You must make a reasonable profit in your business," and it will not be considered a violation of the law for men even to combine to get this reasonable profit, and the proof that such a profit only is obtained should be guaranteed to the public through supervision by government authorities. It is just as much a crime to sell an article worth \$1 for 69 cents as it is for business men to combine to sell the dollar article for \$2.

We believe this principle is going to be firmly established through the experience the government is now going through in the enormous purchase of supplies for the conduct of the war. Out of this new order of things should come a straight path of procedure and conduct that will not only receive the approval of business men in general, but the government authorities and the great consuming public. It is time for us not only to take the government into our confidence, but the public as well.

I recently heard a retail merchant addressing a section of the Associated Ad Clubs of the World use this expression: "I run my business the way the public wants it run, and I charge them for it."

If there is any one thing the matter with our business it has been that we have been too secretive. If there is anything wrong with my business I want to know it.

Gentlemen, in these days of high prices, in these days of war prices, we, as a class, including the manufacturer of lumber and millwork and the retailer, are selling the cheapest merchandise offered to the consumer, for to-day it costs us 50 per cent. more to mail a letter than it did yesterday, and so far as I can recall, up to this very hour, postage stamps are the only things which have increased in price to the public a less degree than lumber, and now lumber has no competitor.

Recent government reports upon the retail lumber industry showed in the Southwest an average net profit of only 7.2 per cent. I am not quite sure but what the public generally has been led to believe that our profits have been at least ten times that much, and this leads us to another suggestion of co-operation, that those engaged in a particular method of distribution be prohibited from casting upon those who are selling possibly 99 per cent. of the merchandise in our line of trade unjust aspersions, reflections, and misrepresentations, wholly misleading and untruthful, and, we believe, unfair competition in the extreme.

In my judgment, the policy of certain well-known distributors, in their attitude towards the ordinary retailer, as seen in their advertising and correspondence, has done more to curtail the consumption of lumber, and hence millwork, than all other forces combined, simply by poisoning the public mind against lumber in general.

We are up against a prejudiced and wrongly-informed public mind. Here it would appear to me to be a wide field for co-operation on the part of the retailer and the manufacturer of millwork, sash and doors. But we have not only to solve some of the problems that have vexed our industry in the past, but the new problems that will grow out of this war are going to tax the ingenuity of the business man beyond anything possibly heretofore conceived.

*Extract from an address before the Wholesale Sash and Door Association at Chicago.

Within the past ten days I heard an address by Lord Northcliffe, chairman of the British War Commission in this country. Some of the statements and suggestions which he made are nothing less than startling. We cannot begin to see or conceive the revolution that is going to take place in the business of the country. May we not ask, What will be the attitude and demands of labor when this war is over? Is it possible to conceive what will be the growth, the outcome, and how much of socialistic doctrines will be injected into our laws and into business when this conflict is brought to an end? I am going to quote some of Lord Northcliffe's statements. He said:

"It will be a very much happier world than this world has ever been. It will be hell for those who did not go to the war and help to bring it about, when these forty million soldiers, who did go, come back to the land for which they fought."

"How difficult for us, in this room, to put ourselves in the mental attitude of a man who has sacrificed his business, everything, and who has crouched for three years under high explosive shells."

"Those will be different men, when they come back. Out there they have forgotten the dollar. They are bound together in bonds of common fellowship. They have got the idea that they have not had their fair share of this world's goods. When they come back they are going to demand a fair share, and somehow, I imagine, they are going to get it. Already they have formed their organizations in France and England. They have a well-defined program of what they will do when they return, and they have chosen the leaders they shall have when they have come back."

"One of the constituent parts of the program they have laid out is they will expel from the farm land any farmer who does not produce on his farm the maximum amount that farm will produce. Already they have seized all the wholesale and retail stores in our country. You people didn't even know these facts."

"I have talked to the French soldiers and to the Belgian soldiers. I have talked to the British and to the Italian soldiers. This prophesy of mine may be a dream, but my dream of this war of which I told you Americans in 1908 came true."

"When those boys come back, after months and years in the open, they can't even live in houses. They can't sleep in beds. They are going to demand as their just reward that the state give them enough land to sustain them; not land on which merely to scratch ground, but to cultivate it intensively, as they have learned from the French it can be cultivated."

"We have had much discussion of the question whether or not large fortunes are good for our country. I happen to have a large fortune, but I don't believe large fortunes are good for countries, and we are taking a practical means in our country to see that they don't grow any more. We have an 80 per cent. war tax."

"Occupations which men followed before the war and thought they were manly will be considered effeminate. Already in England you will not find a man running an elevator. Positions of clerks in banks and railroad offices are being filled with women. When it was first suggested that women be put into these clerkships the managers held up their hands in horror, but they are there, and are doing their work as creditably as the men did."

"What surprised the Canadians more than anything else was the amount of wheat per acre a Frenchman can get from his land. Out there they are inventing their own language, their own habits; they are laying out their program."

And then Lord Northcliffe suggested that when these soldiers of ours come back to this country they will be the men who will control the political destinies of the country, and in support of that suggestion he referred to the fact that most of us possibly could remember that the Grand Army of the Republic, for a generation, absolutely controlled the political destinies of the country.

I am wondering how many here to-night would want to pit your political ambitions against a general, a captain, a lieutenant, or even, a private who shall have done his bit in "going over the top" and bringing this war to a successful conclusion. Yet I believe these soldiers will be our balance-wheel, our safeguard, and our salvation.

In my judgment, the suggestion made by Lord Northcliffe, as applied to a movement of "back to the land" will come nearer being a practical possibility than anything ever before suggested. As he has said, these people are not going to live in houses. He did not mean that. He meant that they were not going to live in layers—in flats; that they are going to get out in the wide, wide country of fresh air;

and that they are going to get away from the humdrum and strife of our great cities.

I have never had any faith in the slogan of "Back to the farm." A man who has lived in a city for five or ten years will never adapt himself to farm life, but the soldier who has lived and dwelt in the rich and wonderfully cultivated fields of Northern France and other European countries will catch a vision that will result in a desire to remain in the open that will not be resisted.

A New Era of Small Home-Owners

This is a suggestion to you and those engaged in the building material business. The manufacturer of lumber and millwork is going to have a look for his field of consumption to the small home-owner. It will be a long time before any substitutes will be devised, from the standpoint of economy, that will take the place of wood for that purpose.

We have recently had occasion to present to the National Lumber Manufacturers' Association a plan of co-operation whereby the wage-earner and man of small means can obtain his own home through the establishment of building and loan associations. That organization has approved of the plan, and is now looking for the man, or men, to inaugurate a propaganda that will make a success of this slogan—"A home for every family."

Here is another opportunity for co-operation. It means business to you. It means business possibly under conditions that will remunerate you far greater than heretofore. But there are some things that are not going to happen when this war is over.

This little retailer, scattered in every hamlet, as well as in the great cities throughout this land, is going to remain in business, and building material, on account of its bulk, weight, and comparative cheapness, will be distributed by him. Eighty per cent. of his business is sold in wagonload lots or less. No other agency can take his place. There is no more economic reason why lumber, millwork and building material should be redistributed from our large centers by the mail order house, even in carloads, much less by local freight, than that coal and cement should be distributed in a like manner. The addition of freight, the government report has shown, is the largest factor in the production and distribution of lumber. It may not be, and it will not be, that a community will support more lumber yards than is necessary, but we believe that out of the co-operation and out of the supervision of business on the part of the government the inefficient and the uncapitalized and the unnecessary will be eliminated. There is no more reason why there should be more lumber yards or more planing mills located in our cities or in our country towns than are necessary than that there should be more postoffices in each of these same communities.

The Elimination of Inefficiency

We have arrived at a time when inefficiency is going to be eliminated, and he who is not alive to the situation is going down and out in a business way.

The retailer, therefore, as well as yourselves, being necessary to production and distribution of building material, what can be done to promote the interests of all? Here is the first sign of a beginning. I never sit around a board of this kind but what I gather an idea of value to my business. I never went away from a place of this kind without having a better feeling towards my competitor and towards those with whom it is my privilege to have business relations, and I take it that this occasion is but the beginning of a new relation between two great factors in our trade; and, in conclusion, I can only say—here is the hand of the retailer—shake! Let us sit down and take counsel together, calling in to sit with us both the public and the governmental authorities.

Gentlemen, getting back to my text, if lumbermen have one universal sin it is giving too much thought to the present, grabbing the bill in sight, frequently at a loss, rather than looking to the future.

Let us look to the future of our business, if it is to have a future, in order that our business may be worth handing over to our sons—our successors.

National Hardwood Issues New Hand Book

The National Hardwood Manufacturers' Association have issued a new edition of their Official Hand Book, to supersede that of May, 1917. Eighty new members have been admitted since that date. The present membership of the Association is the largest in its history and covers more territory than ever before. The Canadian list includes 25 members, 14 of whom are in Toronto, 4 in Montreal, 2 in Owen Sound, and the others in Midland, Ont., Holland Centre, Ont., Hamilton, St. John, N.B., and Winnipeg. The Handbook contains an outline of the objects of the association, a complete list of members, and information regarding the working of the inspection service, as well as a copy of the constitution and by-laws.

Brush Disposal

Practical Methods of Piling and Burning so as to Reduce the Fire Danger

The disposal of brush, in order to remove the danger of fire after logging operations, is discussed in a bulletin (No. 544), entitled "The Red Spruce: Its Growth and Management," by L. S. Murphy, which has been published by the Forest Service of the United States. On this subject the bulletin says:

One of the most potent sources of danger to spruce forests in general is the brush, and, more particularly, the tops or branch wood which litter the ground after logging. The culled logs and tops from which the branches have been lopped do not of themselves constitute a material source of danger, provided they are brought into contact with the soil and rapid decay thus induced. Spruce branch wood, however, on account of its resinous character, is particularly inflammable and resistant to decay, and constitutes a fire menace for several years when unlopped and from seven to ten years when lopped. In the forests where spruce is the predominating species, and particularly in the dense second-growth woods, an enormous quantity of such branch wood litters the cutting area. The ground is likewise covered with a dense mantle several inches in depth of dry needle litter, small twigs, and old cones. All this debris, when exposed to the action of sun and wind with the cutting off of the forest cover, is quickly dried out, and remains for several years an acute fire menace. The excessive branch-wood litter following lumbering and the deep humus cover also greatly hinder spruce reproduction on such areas and help the hardwoods and balsam to take possession through their superior ability to force their way to mineral soil.

When the selection system or other partial clearance cuttings are used, or where the present age of spruce to be cut is not great, and where also a subsequent cut is dependent upon the maturing of seedlings or small trees which are on the ground at the time of the first cutting, the disposal of brush by burning is ordinarily not necessary unless the cut-over area is one on which there is special danger of fire getting a start.

Branch Wood Lopped and Scattered or Piled

If only a little brush is produced and the fire danger is remote, the brush from the carefully lopped tops may be scattered about over the ground, thus hastening its decay. This method has given satisfaction where it has been tried in certain instances in the Adirondacks, at a cost of from 15 to 25 cents per thousand board feet of lumber cut. When more brush is produced than can safely be disposed of in this manner, the tops should be lopped and the branch wood piled. This will bring the larger material in contact with the soil, thus hastening decay. The segregation of the more inflammable material in compact bodies will reduce to a minimum the hindrance to reproduction, and will effect a corresponding reduction in the danger from a rapid spread of fire should one start on the area.

Brush Burned as Logging Proceeds

Excessive amounts of brush, such as arise from the clean cutting of dense, pure stands, should be disposed of by burning. The most economical means of doing this is to burn the brush as the logging progresses. This is feasible when the ground is covered with snow or is damp so as to prevent the spread of fire. Small fires are started near each cutting crew and as the trees are felled the branches are lopped by the swampers and thrown into the fire. As the cutting recedes from a fire and it is impracticable to build a new one, the whole top is hauled near the fire by the skidders before being trimmed.

The advantages of the method are several. The brush is disposed of as the logging proceeds, leaving the ground free for skidding. The cost of handling is kept to a minimum, since the branch wood is handled only once and does not require to be cut up small to insure being completely destroyed, since the tops burn readily, even on the snow or in stormy weather. The time of logging in these forests, particularly those in the Northeastern States and New York, is generally the late fall or early winter, when the weather is damp or snowy, and the danger of the fire spreading is almost negligible. By this method a minimum of area is burned over, which is of importance when there is young growth on the ground to be protected. A too dense young growth or deep snow at the time of logging makes the method impracticable, but for the stands here considered these hindrances will seldom be encountered.

Brush Piled for Burning

Where cutting is done in the spring for peeled pulpwood the weather conditions may not be favorable for the use of the method just described. In this case the brush would be piled when convenient and the burning deferred until subsequent damp weather or until after the first snow of the succeeding winter. Brush piling is best carried on in conjunction with the cutting and skidding operations. It is then only

necessary to employ one extra man, who cuts up and piles the branches as they are lopped from the stem. The brush is thus immediately cleared away for the skidding of the logs and a second handling avoided, which means a considerable saving in expense. Then, too, more efficient work results when the men who trim the pile work together. Supervision is also less costly when the brush piling is made a part of the logging work than when it is a separate operation.

Brush piles should be small, not over 10 feet across and 6 feet high, with the branch wood closely and systematically piled, tops of the branches toward the centre of the pile, the small branches in the bottom to facilitate the firing of the pile, and the piles well isolated from one another, from down logs, lopped tops, reproduction, and the trees to be left standing. Trimmed sticks leaned against the pile hold it in shape, keep it from being blown over, and render it more compact for burning. Compactness in piling is the key to efficient, clean burning. Loosely-piled brush requires repiling or constant tending when burning to ensure complete destruction, both of which operations are expensive. The cost of piling and burning varies with the condition of the stand between 10 and 50 cents per thousand board feet of timber cut.

Burning the Piled Brush

Careful organization of the work should precede the burning of piled brush. A sufficient force of men equipped with fire-fighting implements should be on hand to prevent the fire from getting beyond control. Burning should not be attempted in windy or dry weather. The most opportune time is after the first snow of winter. The piles are then dry enough to burn well except for the outer snow-covered layer. There is little or no danger of the fire running along the ground, and the snow cover on the branches of the standing trees affords the necessary protection against their injury by the rising flames. In the absence of snow, damp weather is essential to ensure the ground being wet enough to prevent the spread of the fire. With a slight wind, other things being favorable, burning may take place, provided the fires are started on the leeward side of the area and progress against the wind. Likewise when brush is being burned on a slope the uppermost piles should be started first, the progress being from the upper to the lower level of the slopes. A further precaution is necessary where the piles are close, namely, that only every other or every third pile be fired at first and these allowed to burn down before the remaining ones are started. If all the piles are fired together, a strong, uninterrupted upward current of heated air will inevitably cause injury to the remaining standing trees, even if they have short crowns, well up from the ground. The alternate unburned piles act as a check by interposing cool air spaces, thus isolating separate fires.

Broadcast Burning

Broadcast burning has been previously mentioned in connection with the clean cutting in strips of even-aged spruce stands. Here the object is not only to get rid of the large amount of brush which cuttings of this sort yield, but to eliminate as well the deep accumulation of undecomposed litter which greatly hinders the coming in of spruce seedlings and also constitutes a menace to what seedlings do succeed in getting established by endangering their future destruction by fire. It is also cheaper than piling and burning. In using this method the logging is conducted in the ordinary way, except that the tops are lopped to allow the mass a better opportunity to settle and thus facilitate clean burning.

The same or greater care must be exercised in using this method to ensure its complete control. Favorable climatic conditions must be chosen and a well-equipped force of men provided. The slash should be fired at a time when it is dry enough to burn well, but not so dry as to endanger the adjoining timber and allow the fire to get beyond control. The brush in the open area will dry out more rapidly after a drenching rain or moderate fall of snow than will the timbered area, so that, if the fire is properly timed, the brush can be burned while the timbered area is still too damp to burn freely.

Isolating and Subdividing Burning Area

The area to be burned over must first be isolated from the contiguous uncut areas by the clearing of all inflammable matter from wide strips on all sides. This may be accomplished by throwing all tops and lops for a distance of from 20 to 40 feet from the edge in toward the centre of the cleared area. It would be preferable, though, to clear away, pile, and burn all brush on such strips in the manner previously described before attempting to burn the remainder. If the cleared area is of considerable extent, a wise precaution would be to pile and burn similar fire lines through the middle, thus dividing the area into halves or quarters. If the area is small, the logging roads will serve as intermediate fire lines.

With the necessary control lines cleared and burned, the general burning would begin at the leeward side or along the upper end if the cleared strip is on a hillside. The plots between logging roads would serve as units for burning. Only alternate plots along the leeward or

uphill front should be kindled, and these should be allowed to burn down before another set is fired.

The method is unquestionably more dangerous than burning in piles, demanding a larger force to handle it. Careful judgment in the choice of time for burning is essential. The method should never be employed where the mineral soil is thin or nearly lacking, as is the case on many of the steep, boulder-strewn upper slopes in both New Hampshire and the Adirondacks. Under such circumstances, the main purpose would be defeated and the slopes rendered barren and unproductive.

Light Burning

Under certain conditions the annual or periodic burning of the litter under growing stands might be advisable. Where there are dense, even-aged, planted, or natural stands in which thinnings are not to be made, and therefore humus disintegrations cannot be controlled, an occasional light burning would afford protection from damage by an uncontrolled ground fire during a drought. The soil would also be put in a more receptive condition for reproduction when the final cutting was made. The operation requires extreme care, otherwise its purpose will be defeated.

The recommendation for the use of this means of fire protection and soil improvement is qualified and made contingent upon the adoption of the following precautions:

The stand to be thus treated must be established on moderately deep mineral soil.

Except where the slope is very gentle, any accumulation of litter should be removed from the upslope side of the trees before burning.

The burning should not be undertaken until the trees are sufficiently large to have developed a suitable thickness of corky bark to afford the necessary protection from injury, and are sufficiently cleared of their lower branches to afford opportunity for the fire tenders to get about easily and to control the fire.

In the absence of roads or other cleared areas which might be used for fire control, ground-cleared fire lines should be provided around the border and possibly at intervals within the stand, particularly if a hillside is to be burned.

Burning should be restricted to a time, preferably early spring, when the loose top litter is dry but the under layers and soil are damp. The burning must not be allowed to reach to mineral soil.

A sufficient force of men properly equipped for fire-fighting should be in attendance to check a too deep burning and prevent the fire getting beyond control.

The plan of burning in strips along a well-defined and protected front, with gradual progress away from it, should be followed. All other precautions mentioned elsewhere should be carefully observed.

Light burning is not advisable in selection stands where the reproduction and young growth form a distinct asset, since they would inevitably be injured or destroyed. It has a place where dense, even-aged stands are to be cut clean and reproduced by natural regeneration methods, although too much emphasis cannot be laid on the danger of fire escaping and the taking of every precaution necessary to prevent it.

Brompton Pulp and Paper Had a Good Year

The first annual report of the Brompton Pulp and Paper Company states that earnings totalled \$1,073,562. After deducting \$176,670 for depreciation, \$87,066 for bond interest, and \$140,000 for preferred stock dividend, there is a net surplus of \$669,826 available for the common stock, an amount equal to 9.6 per cent., earned on the \$7,000,000 issue. After distributing 5 per cent. to shareholders for the year, a surplus of \$319,825 is carried forward to surplus account. Mr. F. N. McCrea, the president, states that great difficulties confronted the directors during the past year, owing to the abnormal conditions prevailing, which in most measure mitigated against the operations of the plants. Nevertheless, the directors felt that the shareholders should have every reason to be satisfied with the results of the company's operations. The outlook for the present year's operations is satisfactory.

A Valuable Valve Controller

The advertisement of the Wm. Hamilton Company, Limited, Peterborough, Ont., appearing in this issue of the Canada Lumberman, is of particular interest to all lumber manufacturers. It refers to the work of "Prescott's Valve Controller," which this company is putting on the market. The work of Prescott's Valve Controller is to eliminate trouble with steam feed valves. According to a letter received from an important Ontario lumber manufacturing firm who used this valve during 1917, it has done away with all the trouble experienced in connection with violent jars and jerks of the sawyer's lever, which so frequently results from water condensation in the steam pipes. We recommend manufacturers to turn up this advertisement and study the claims made for this valve controller, feeling sure that the matter is of sufficient importance for them to enquire into the application of this equipment in their own plants.

The Douglas Fir Ship Knee Industry

Methods of Obtaining and Manufacturing an Important Part of a Wooden Ship's Timbers

One of the most interesting of the minor industries connected with the building of wooden ships is that of supplying the ship knees. Briefly defined, a ship knee is a natural crook formed by a shallow horizontal root and a section of a tree trunk. The function of a ship knee is to lend strength to a right-angle brace in a frame member of a vessel. These knees or crooks derive their great strength from the nature of the root fibres, which are exceedingly tough and twisted.

The knee consists of the following elements: stem, arm, toe, heel and throat. The stem is the vertical element formed by the section of the tree trunk; the arm is the horizontal member formed by the root; the toe is the extreme portion of the arm or root; the heel is formed by the intersection of the stem and arm; the throat is the depth measured diagonally from what corresponds to the instep of the human foot to the tip of the heel. All these elements are clearly marked on the drawing herewith.

One of the very best timbers for ship knees is second-growth Douglas fir, found growing on shallow soil, underlaid with clay or soapstone. In such timber the roots are shallow and turn off at right angles to the trunk, thus giving the correct shape to the crook. Having found the desirable class of timber, a locator then makes a survey of the tract and with a shovel and mattock prospects around the roots of the tree which he believes will yield a ship knee. After this preliminary examination such trees as believed possible of yielding knees are carefully marked for the falling crew. A tract of timber that will produce five to seven knees per acre is considered a good location for a knee camp.

In preparing a knee tree for felling the crew uses an ordinary shovel and mattock to uncover the desirable root. After the root is bared, all small roots adhering thereto are severed and the perfect root is either sawed or chopped off at a distance of two or more feet from a point in line with the body of the tree. The next step is to cut all the remaining surface roots and tap roots at the base of the trunk. By this time the tree will be inclined to fall, and if not it is wedged over by hand. When the tree is down the stump is bucked off at a distance of six to seven feet from the root and is then ready for the milling operation or hand hewing.

Milling the Knee

There is one sawmill in Oregon designed for the exclusive milling of ship knees. A specially constructed saw carriage necessarily had to be installed for this purpose. The stump is placed on the carriage and after being lined up properly, is given four cuts with a double circular saw rig, after which the knee is ready for the pile. The sawing of ship knees is a severe ordeal for saw steel. In most cases it is almost impossible to remove all gravel adhering to the stump, and often the saw will encounter stones that are completely encased in the twisted fibers of the root. Eliminating the source of difficulty imposed by the gravel and grit, there still remains for the

saw a severe test in cutting through the tough fibers of the stump.

There are two distinct methods of turning out ship knees by hand hewing. In one method the exact process of preparing the stump for milling is carried out. When the stump is cut the axeman lines it up according to the size of the knee the tree will produce. After lining up the stump, the first operation is to trim the root or tie. Then the stump is laid on its side and scored and the axeman then proceeds to hew to the line determined upon. The same operation is then repeated on the other side. The next step is to take the final measurement called for in the specifications and lay off this distance on the arm to determine the exact point of the heel. Having done this the back of the knee is scored and hewed to the predetermined line. The knee is then laid on its back and the bottom, or what is sometimes termed the breech, is taken off. The bark is then peeled from the knee and the operation is complete. A day and a half to two days is usually required for a man to hew a 12-inch knee. An expert knee hewer, however, will grub, fall, buck, score and hew a knee of this size in one day.

The second and newer method of hewing ship knees, which is now being practiced by many operators, is that of shaping the knee almost completely before the tree is felled. In this method of procedure the root is exposed and trimmed to whatever size it will make. It is then lined up on the stem or trunk of the tree and hewed to size while standing. The tree is felled when the last side cut is made.

How the Knee is Measured

Most knees run from six to 14 inches in size. The knee is measured across its face, taken at the tip of the toe, across the face of throat and across the face of the tip of the stem. Payment is rated in inches of diameter. The price of ship knees varies from 65 cents per inch to \$1.50 per inch, according to the size. Large knees for stem and stern construction are sometimes sold on a lump sum basis which may range from \$90 to \$100. A tree 24 inches in diameter will yield one knee that measures approximately 12 inches across its face. This shows roughly a ratio of 2:1, which works out in most cases.

There are no grades of ship knees. The knee is either accepted or rejected. The following constitutes a perfect knee:

1. No rotten or forked toes are permissible
2. No holes in the toe extending clear through the root are acceptable.
3. The knee must contain no deep gouges or wane.
4. Knees must be about square at the toe, i.e., the stem and toe must join at approximately right angles.
5. The sides of the stem must be lined up to conform to the side of the root.
6. All bark must be removed and the knee finished in a workmanlike manner.

Knees Required in Hough Hull

The following is the list of knees, with their sizes, required in the construction of a wooden hull of the Hough type:

Pieces	Size	Length of Stem	Length of Arm
2	18"	10'	6'
22	12"	5'	4'
10	12"	6'	4'
32	8"	5'	4'
10	8"	3'	2'6"
4	8"	6'	3'6"
16	7"	4'	4'
8	6"	4'	4'
24	7"	2'6"	2'
4	6"	2'6"	2'
34	6"	4'	3'

It will be seen that the Hough type requires 166 knees, principally the 6, 7, and 8-inch sizes.

The knee schedule for vessels of the Ferris type is as follows:

Pieces	Size	Length of Stem	Length of Arm
20	4"	6'	4'
40	6"	6'	4'
80	8"	6'	4'
58	9"	6'	4'
4	12"	6'	4'
2	20"	8'	4'

The total requirements of the Ferris-type aggregate 204 knees, chiefly of the sizes from 4 to 9 inches, nearly all of which are of the same stem and arm measurement.—The Timberman.

Diagrams illustrating elements of a ship knee.

Fig. 1—Sectional view of ship knee showing relation and nomenclature of principal elements.

Fig. 2—This sketch shows how a ship knee is measured. The diameter through the three points 1, 2, 3 determines the size and value of the knee.

Riving Spruce for Airplane Stock

By B. L. Grondal

In the camps of operators now engaged in riving, the writer has found that the average crew is composed of seven or eight men. Good men are absolutely necessary, and to obtain such men wages of \$5 per day and board are usually paid. The foreman of the crew selects the trees to be rived. The splitting qualities of a tree are tested before the tree is felled by chopping a liberal niche into the tree and noting the manner in which the wood splits. The average man after a week of such testing can determine very accurately the difficulty of riving a standing tree. After the trees have been selected by the foreman, a pair of fallers fall and buck the trees. Two men can fall and buck more timber than the rest of the crew can rive, and their spare time is spent in riving. After the tree has been bucked into logs of the most economical lengths, depending upon defects in the tree, the logs are rolled clear from the cuts upon rough skids through the use of hand timber jacks of the usual type. Two or three timber jacks should be provided for each crew.

The logs are then split into halves. Two methods of accomplishing this are in general use. The original method consisted of splitting the log by driving ordinary steel wedges into the end of the log with mauls until a split began to open. Larger iron-bound oak wedges were then substituted. The splitting of the log through the action of the wedges in the end was assisted by wedges driven into the longitudinal surface as soon as the split appeared.

The splitting of five or six-foot logs with mauls and wedges is, as one can imagine, no small job. The splitting of the logs with the use of explosives has been found to be more economical in time and labor, while the cost of powder is trifling. Low-grade blasting powder (20 per cent.) should be used, to avoid the shattering of timber in the log. When properly handled, two and a half sticks of such powder will split the average five-foot log twenty-six feet long. High-grade powder, which has great shocking but low rending power, should be avoided. Black powder is much superior to other forms of blasting powder.

The methods used in blowing the logs are similar to those commonly used in blowing redwood logs. When a short log is to be split, a hole about eighteen inches deep and a little larger in diameter than the stick of powder is bored in a radial direction into the log halfway from the ends, with a ship augur. The powder and fuse are then introduced, and the hole is filled with clay and securely tamped. Where only one charge is placed in the log, ordinary fuse and caps are used. The resulting explosion will usually split the log fairly into halves. In boring the hole, advantage should be taken of natural splits in the ends of the log, so that material will not be wasted. Two or three shots in a long log, five or eight feet apart, and exploded electrically, will shatter less timber than one large single shot. When properly handled, powder shatters only a very little timber. While there has been some discussion upon the probable effect on the strength of the spruce for airplane construction obtained from logs that have been split with

(Reproduced from the West Coast Lumberman.)

powder, the writer feels that this is unfounded. Due to the high cost of powder, there is a natural tendency to use as little as possible.

When there is sufficient room, the splitting of a log by means of wedges can be accomplished quite readily through the use of an improvised battering ram made up of a log section suspended in a tripod. This method of splitting is not, however, in general use. The halves of the log are, in turn, split into halves by means of wedges. Timber jacks are used to turn these sections into positions on the skids favorable for splitting. Large logs are split into as many as six sections.

The sections are then ready for riving into dimension timbers. A rectangle including the greatest possible cross-section of squared timber that can be cut from the cant or section is then laid off on each end of the section. While the laying-off of these rectangles offers no difficulties for the skilled timber worker, the writer has devised a simple little instrument that will enable any unskilled operator to lay off the timber so as to produce a timber that will be free from wind. This is shown in one of the accompanying illustrations. As will be noted, the instrument consists of a common carpenter's wooden level, placed in a frame so that it can be rotated on a fixed axis at one end. The upper edge of the instrument is a straightedge. The straightedge is placed upon the timber in the manner illustrated, and the level is swung until the level bubble is in the center of the glass. The level is then clamped to the frame. A line is then drawn along the straightedge on the section, and the instrument is then carried to the other end of the timber, where side "A" of the instrument is placed against the section and another line drawn on the end of the section. The rectangle can then be completed on each end of the timber by means of a common carpenter's steel square. A board is then lightly tacked against the end of the section, with its upper end on the line first drawn, on each end of the timber. A marking line or chalk line is then stretched from the upper edge of the boards on each side of the timber, and the upper edges of the timber that is to be hewn from the cant are sketched with crayon on the rough sides of the log section, following the chalk lines.

After the upper face of the timber that is to be hewed has thus been laid out, the triangular section left above the plane of the upper edge of the timber is removed in short sections. This is done by making saw cuts spaced about twelve to eighteen inches apart to the depth of the crayon marks on each side of the timber, as is illustrated. The blocks of wood thus separated are then split off with axes, the axemen adzing the surface of the timber with the same axes that are used in splitting off the short blocks or bolts. Occasionally, especially on the heart side of a timber, it becomes necessary to split off the blocks by means of wedges. When one face has been completed, the timber is rolled over on the skids with timber jacks, and the other faces are hewn. The completely rived timber is then thrust aside and the next section is hewn, and so on until all of the sections have been rived.

It is common practice to leave the rived material in place until the logs from one tree have all been rived before they are removed from the woods. When a sufficient supply of rived material has been accumulated, roads to each store of timber are swamped out, and the

Simple laying-off instrument

Laying off flitch for squaring.

Battering ram for first split.

timber is removed with horses and the aid of common go-devils, in the same manner as piling is ordinarily handled.

Inefficient handling of the crew should be avoided. For instance, the building of roads with men who are paid \$5 per day and board is rather uncalled for, and even though the business leaves a considerable margin for profit, such a procedure is far too expensive. An attempt should also be made to co-ordinate the work so that one crew building roads can be kept busy with no slack time, while the fallers can fall and buck timber for several crews. Men should also be kept at blowing and splitting, while others should be trained in laying out and squaring the timbers. The most efficient operation will, therefore, include from twelve to fourteen men per camp.

The waste of material in riving spruce is very great. Care should be taken to avoid trees that have rotten and hollow butts, for the best material for riving is in the butt log. Usually only forty or fifty feet of the trunk can be rived, as the cost of riving material that contains a few knots is too great, while the quality is also so much lower that a profitable price cannot be obtained for such material.

Only about 25 to 30 per cent. of the merchantable timber in a spruce tree can be rived out. The remainder is wasted in the woods. While conservation enthusiasts will no doubt hold up their hands in horror at this waste, it is better to waste spruce in the woods than to waste American lives at the front. Under present conditions closer utilization is not possible, due to the cost of removing the less valuable material from the woods. A large amount of the material that is removed from the timber sections in squaring out the rived material is of the most excellent quality for box boards and similar purposes, and it would be very possible to remove it by means of wedges in four or five-foot sections instead of in the short blocks, but as the price that can be obtained for such bolts with the prevailing stumpage prices for spruce is too low, the saving of this material will be possible only in special cases.

The establishing of a cutting up mill at Vancouver Barracks, Wash., by the United States army offers a splendid opportunity to provide closer utilization of spruce in riving operations. There seems to be no reason why the spruce should necessarily be rived out into rectangular form. The squaring of the timbers is an expensive operation. It is true that such squared material is more easily removed from the woods, but the removal of the rived spruce in rough triangular sections should offer no insurmountable difficulties. The average operator engaged in getting out rived spruce would, no doubt, be willing to sell such material on the scale that it would produce if squared up, and the result would be a marked increase in the amount of material available for airplane construction.

Operators now engaged in riving spruce report that with an eight-man crew a daily average production of 200 to 250 feet of spruce per man can be maintained. This figure will no doubt increase considerably as the men become skilled in the various operations. Actual profits cannot, however, be very definitely predicted, as the location and character of the timber and the expense of building roads and transportation to railroads or tidewater will influence the final profits very much. Sawn spruce commands a price of \$105 per thousand. Before the spruce production was commandeered by the United States Government rived spruce was occasionally sold for as much as \$250 per thousand. Rived spruce, being straight grained and free from defects, will sometimes produce as much as 85 per cent. of beam stock, the most expensive wooden part entering into the construction of an airplane, while sawn spruce will often produce only 15 to 20 per cent. of similar material. At the present time the government is paying as much as \$130 per thousand for rived spruce, f.o.b. point of shipment, the price varying with the point of shipment. It is possible that prices paid in the future will be adjusted to meet the cost of production, which will vary in different localities.

According to A. F. Peterson, of Aberdeen, Wash., a pioneer in the riving industry, the outlay for a riving camp is very small, and the little operators are able to split up scattered trees that would not be available for a steam logging operation.

A splitting crew consists usually of five men. An outlay of \$200 to \$300 will provide the necessary tools, which are as follows: Plentiful supply of wedges, both steel and wooden; mauls; one ten-pound sledge; two logging jacks; a crosscut saw; one felling saw; two axes; one steel splitting bar with four-inch face; one horse; one "go-devil" or wooden sled with natural crook runners; chain, rope, and peavies.

A spruce tree, after being felled by the riving crew, is bucked into the prescribed lengths, and with wedges and sledges is split into six or eight segments, much as one would lay open an orange. The bark and slab is taken off each segment and the wedge hewn away to square up the cant. An extra inch in width and thickness is allowed on each cant to take care of irregularities in splitting. Four inches over length is also allowed in finishing the cants.

A five-man crew will produce from 800 to 1,000 feet per day. The price received for this material is \$105 per thousand feet. There are at present about ten crews getting out rived spruce in Gray's Harbor County, Wash.

How Many Logs Are Lost by Sinking?

One of the questions asked of the paper manufacturers of Canada in the course of the Government "probe" into news print paper prices recently has had to do with the percentage of loss due to sinking of logs between the timber limit and the boom. This loss, if determinable, affects the costs of operations and must be included in any thorough-going compilation of production figures.

An interesting reference occurs in the well-known text book, "Logging," by Prof. Ralph Bryant, of Yale Forest School, as follows:

"A very appreciable loss in driving timber is due to sunken and stranded logs. The extent of this loss is dependent on the species driven and the character of the stream.

"Where timber is brought down rough streams, over waterfalls, and past obstructions, it is often badly battered and broken, and gravel and sand become imbedded in a large per cent. of the logs. Occasionally they accumulate iron and spikes, especially where iron dogs are used in rafting. Much of this foreign matter is not readily detected, and mills suffer a monetary loss due to damaged saws and time lost by the sawmill crew.

"The actual loss in log scale from all causes on the Mississippi River drives averages about 10 per cent.; on the Cumberland and Tennessee Rivers in Kentucky, 10 per cent.; in Montana, 10 per cent.; spruce, 5 to 10 per cent., and birch, 3 to 27 per cent. on short drives in the Northwest; hardwoods in Pennsylvania, 25 to 40 per cent.; yellow pine, 20 to 33 per cent. The loss in the Lake States may be as high as 30 per cent. On short drives of coniferous timber the loss is small and may be from zero to 3 per cent. This loss is due largely to sunken and stranded logs and not to the deterioration of sapwood."

In the case of James L. Gates, Elliott C. Young, Lumber Inspector of District No. 2, Wisconsin, tried in the courts of LaCrosse, Wisconsin, in 1901, an attempt was made by plaintiff to compel defendant to reimburse him for difference in scale between the "bank" and the boom. During the trial prominent lumbermen from the Black River district testified that "there might and would occur a difference between the woods and mouth scale of from 10 to 30 per cent.

Logging Conditions in Need of Reform

By J. W. Gleason

In taking up the subject of logging conditions and the effect of labor on logging costs I want to emphasize the absolute necessity for doing something to meet the seriousness of the situation, for I prophesy that if adequate measures are not provided the woods departments will be destined to failure in their work of keeping the mills supplied with logs.

It goes without saying labor is the most essential business asset to any logging operation. The scarcity of labor as I see it now is caused by the restlessness of the men who continually shift from one place to another. One of the primary causes of this condition is lack of uniformity in the woods wages, rumors reaching men in one camp of excessive high wages they pay men in other camps, even though the rumor may be refuted by actual conditions, and I maintain that anything that would work toward bettering uniformity and understanding between loggers would tend to minimize this tendency of labor.

I believe that if the men who are travelling from one camp to another and lying around saloons and other places were at work where they should be, there would be sufficient help to supply all the camps and then some. I will venture to say that there are more men riding on railroad trains and walking back and forth on the tracks than there are working in the logging camps. "They don't know where they're going, but they're on their way." These are the conditions existing in our locality.

There never was any great evil without some cause, and, gentlemen, I believe we are to blame to a certain extent—more than the lumberjacks. It has been the custom of all of us without any exceptions, to send agents to the cities to hire men and make contracts with employment agencies at those points to supply our operations with men. We would advance transportation and often pay the employment fees, bring them to the different camps, and set them down to a menu that would make our national food administrator throw up both hands in holy horror. I have seen as many as three kinds of meat set on the table, with wheat, corn, graham, rye, ginger bread and parker house rolls, three kinds of cookies, three kinds of cake and doughnuts, and for dessert they could have mince, apple, rhubarb, pumpkin, raisin or prune pie; and to top off with they could bring on some canned peaches, pears or apples or something of that sort. Is it any wonder that these fellows should be bewildered, men who never had a square meal before in their lives—they would just simply eat and eat until they killed their engine dead, to use the term we use when we feed our automobile too much gasoline. We have to be more particular in feeding our horses, for if we overload them we would kill the engines that propel them. I am a firm believer in feeding men good wholesome food and lots of it, but I do not believe

that they should be doped up with all kinds of compounds and all these new kinds of dishes that are advised by some of the wholesale grocers as a substitute for this, that and the other thing. I believe if you get a cook who can cook all kinds of vegetables, meats and potatoes, bake bread and make pies, make soup and hash once in a while, you can reach a man's heart easier and inject more incentive and pep into him than by anything else you can do.

Co-operation Needed

Uniformity, co-operation and understanding in this matter will have a tendency to eliminate some of this extravagance in camps. The whole commercial business of the country is evolutionizing. Why do we not evolutionize ourselves? In my opinion the only remedy for all the evils and ills that we have to contend with today—at least a very good one—is composed of incentive, energy, competency, and loyalty. These four terms spell efficiency.

Efficiency is the short cut to low logging costs and is figured into dollars and cents by the expert efficiency accountants in the office. But the cost of logging has got to be figured on the ground by the superintendent in charge of operations, who will either make the proposition a successful one for his company and himself or bring condemnation from the people he represents. The superintendent of a successful logging operation is a man who can command respect by his entire organization—he has a knowledge of his work—he is a man who has been promoted from the bottom of the profession until he has reached the highest pinnacle—he is a man who can read human nature, is firm in his instructions and has the good will of all of his men. But the fundamental and essential principle is he must be a man—he must love his work for the accomplishment there is in it, not for the money consideration—he must be a man who can give his superior officers absolute satisfaction; he must use every ounce of ability within him when he selects his foremen and assistants who will have actual charge of the different camps.

Take for example, an average logging operation handling from 20,000,000 to 25,000,000 feet per year; employing from 250 to 300 men, forty to fifty teams, two or three steam loaders, two or three locomotives and operating its own railroad. When this is divided into two or three different parts or camp organizations, the foreman in charge of each one of these camps should be a man with brains and initiative ability. The superintendent of a logging operation need not be a czar, and when matters of importance come up he should converse freely with the foreman absolutely in charge. Keep the entire organization moving by cutting expenses wherever possible without impairing the efficiency of any department; use every effort to get more efficiency from your workmen. Efficiency means the power of producing results, and when we speak of man efficiency in a logging operation, we speak of the organization. No man can be efficient unless the organization for which he works is perfected. The man is one unit of an organization and it is through his individual effort that he makes good or falls behind and gets fired. I believe that to get the maximum of efficiency from every man, operations in each camp should be classified, namely:

Roads and Spurs.

Skidding and Loading Department.

Sawing and Swamping Department.

Boarding Department.

In looking into the organization of all these departments it is up to the superintendent to get a well organized crew and school the men to special jobs and keep them there at all costs. The day has come when we loggers have to specialize and it is the specialist who knows the short cuts in costs. The story in a few words is simple. The best method is to scure energy from your workmen, but to do this we cannot work by any given rule. We must keep our equipment in repair; we must use a different lubrication on our organization, on our machinery, on our horses, on our men and on ourselves, for the men who can put the logs to mill at the least possible cost are the men whom the lumber interests are looking for today.

Encourage Piece Work

The capacity of every man who is connected with a logging operation is measured by the amount of work he can do. I believe that we should encourage piece work that gives a man a chance to demonstrate what he can do, to see how much more money he can earn than the other fellow. I have known of instances where one man at piece work earned six times as much money as the monthly man did at the same kind of work; therefore I recommend anything that works out satisfactorily, and especially at these times, when the ranks in our operations are broken on account of so many able-bodied men joining the colors in the last year. I think if we do justice to ourselves and to our men, we should do all we can to encourage them to turn out the work, for the government needs the lumber to build cantonments, airplanes, boxes and crates to ship foodstuffs, munitions and clothing to the boys at the front.

Guarding Ontario's Timber Areas

By E. J. Zavitz

The Forest Fires Prevention Act passed by the Legislative Assembly of the Province of Ontario in 1917 places the administration of forest fire protection under the Forestry Branch of the Department of Lands, Forests and Mines.

Control of the setting out of fire within forest regions is given through Regulations passed by Order-in-Council. It is necessary between the 15th of April and the 30th of September to obtain a written permit in order to set out fire for the disposal of slash or other debris. This written permit is issued by the fire ranger or other duly authorized official and contains certain restraining conditions. The ranger is given special instructions in reference to the conditions under which the permit is issued. For example, the ranger may find it advisable to name the exact hour at which burning shall start or that some special protection be provided while burning is being done. The issuance of the permit requires the personal inspection of the ranger.

Another feature of the new Act is the provision for the disposal of fire hazards. Wherever conditions exist which are a menace to life or property the Act provides for definite action by which such danger may be removed.

Field Organization

The forest region of Ontario, subject to the Forest Fire Act, is divided into 35 districts, each of which is in charge of a Chief Fire Ranger. During the past season we have had 34 Deputy Chiefs assisting the Chief Fire Rangers where areas were large or difficult of access.

The maximum number of rangers for any one period of the past season was 1,039.

In addition to the above organization we have had 12 railway inspectors, whose duties were to carry out the provisions of Order 107 of the Board of Railway Commissioners for Canada.

For inspection purposes the forest region was divided into three inspector divisions with a superintendent in charge of each division.

To sum up, during the past season the entire force required in the field, for the carrying on of this work, was 1,123 men.

Forest fire protection cannot rely alone on the ranger or patrol system. The 1,000 men in the field as rangers are helpless if not backed up by modern detection methods.

During the past season the lookout tower on high points has been introduced into nearly all of the districts. The Nepigon Reserve had previously adopted this method and found it a great assistance in the detection of fire. During the past season 85 towers have been built at a cost of over \$10,000. These towers are permanent structures located so that communication may be had by telephone with outside assistance.

In addition to the permanent tower, rangers are instructed to clean out trails to high vantage points. These observation points frequently command the view of vast areas and are of great assistance in locating fire.

One of the most difficult problems in connection with fire detection is to keep up lines of communication. The lookout tower without communication by wire is of small value. The lookout towers in Nepigon Reserve are tied up to 130 miles of telephone line. We have at present about 200 miles of telephone line available in forest reserves. Throughout most of the settlements in the Clay Belt where towers have been built local telephone lines are available. Along some of the railways it will be possible to tie up with the local stations.

This whole question of communication will require special attention. We have not rushed into the construction of telephone lines on a large scale, feeling that more study should be given the problem.

Reaching and Fighting Fire

Locating forest fires is a comparatively simple matter. Reaching them in time to take effective measures is the serious problem. In many of our districts the only way of reaching interior fires is by long canoe routes and trails. However, in such districts fire hazards are usually small owing to the inaccessibility of the territory.

Where roads, navigable water or railways make rapid transportation possible there are various methods to be employed which help in solving the problem.

During the past season we have employed three small power boats along the shores of Georgian Bay. We have larger power boats on Lake of the Woods, Winnipeg River, Lake Nepigon and Lake Temagami. In addition to the above seven power boats we have several outboard motors which are primarily intended to assist chiefs in covering territory where previously they had long canoe routes on the larger waters.

The most efficient arrangement to be made with a power boat is such as we have on Lake Nepigon. The boat remains the major portion of the time at a definite headquarters which can be reached by telephone from the outlying stations and lookouts. This boat is

equipped with fire pump and 1,000 feet of 1½ inch hose, also other fire fighting equipment, and can proceed to a fire with the least possible delay. At present we have three power boats equipped in this manner. On railway lines we have five power motors used for inspection and carrying fire fighting equipment. In patrolling some eighty velocipedes are being used and such mechanical attachments as the Smith motor which are being tested.

Last spring five motor trucks were purchased and these are giving good results in the districts where roads are passable.

This organization carries about \$100,000 worth of equipment. In addition to blankets, canvas buckets and minor equipment, it was necessary to purchase this season 185 canoes at a cost of \$10,000; 200 tents at a cost of \$3,000; 28 new velocipedes at a cost of \$1,500.

One of the problems connected with this work is the overhauling and repairing of equipment and its proper storage. This has required the building of central storehouses. Five storehouses have been built and several others leased temporarily.

Record of a Busy Season

Improvement work such as construction of trails, etc., can only be carried out efficiently after the field organization has been perfected. Our organization being less than a year old has much to learn, but the following are some of the more important improvements carried out this past summer.

New fire rangers' cabins built	44
New docks or boat landings	18
Acres of fire hazard burned	3,356
Miles of old trails and canoe routes cleaned out	1,031
Miles of new trails opened	514
Fire signs posted	65,000

In this connection I will refer to the permit system. Owing to a very wet season in the Temiskaming country this system was not given a severe trial. Our rangers issued 3,886 permits and no serious opposition was encountered.

Fire Statistics for 1917

1. Number of Fires:—	
May	441
June	317
July	152
August	115
September	66
Total	1,091
56.1 per cent. did not exceed 5 acres.	
56.1 per cent. did not exceed 5 acres.	

2. Causes of Fires:—	
Settlers	91
Camp Fires	98
Railways	541
Lightning	28
Indians	54
Logging Operations	45
Miscellaneous	40
Unknown	194
Total	1,091

Areas Burned

3. Timberland, mainly coniferous	71,910
Timberland, mainly hardwood	110
Cutover, some coniferous timber left	148,368
Cutover, some hardwood timber left	2,160
Young growth, mainly hardwood	13,202
Barren	82,922
Grassland	2,332
4. Ft. B.M.	15,278,000
Cords	90,446
Ties	781,685
Posts	150
Poles	125
5. Private property	\$2,727.00

The forest region of Ontario over which our organization has jurisdiction covers an area of over 100,000,000 acres. The greater part of this region is covered with coniferous growth. Large areas have been cut over leaving inflammable slash. Three transcontinental railways pass through this territory over one thousand miles in length, opening it to prospector, timber cruiser and scattered settlement, bringing in their wake problems of fire protection. Over 4,000 miles of railways cut through this forest region.

May Remodel New Brunswick Forest Service

A proposal is being considered in New Brunswick for the re-modelling of the Forest Protection Service of the Province. A movement is under way to have the Provincial Government reorganize the system of fire protection on all its timber lands. The plan proposed by the Chief Forester and strongly supported by public bodies is to establish a system of fire districts each in charge of a competent forester. Instead of locally controlled fire wardens, as at present, there would be a centrally controlled body of skilled men, under constant supervision and discipline. Systems similar to this have been proved to be the only workable and economical method of forest protection in the provinces of Ontario and Quebec. The rangers would perform their duties according to schedule giving close account of their time and work. They would be assisted by observation towers, telephone lines, etc. To encourage the best rangers to remain in the service, the chief forester plans to utilize them in supervising cutting operations during the fall and winter.

Canadian Milk Products Hold Conference of Salesmen

The First Annual Salesmen's Congress held by Canadian Milk Products, Limited, of Toronto, Ont., took place on December 27th and was an interesting and important event. Mr. B. A. Gould, president and general manager, addressed the conference, giving them a history of the milk powder business with special reference to the history of its manufacture in Canada, which commenced in 1903. Mr. S. B. Trainer, secretary and treasurer of the company, gave a brief outline of the development of the selling organization and general sales campaign within the last few years. Among those attending the conference from branch offices were:—B. D. Buford, manager of the Quebec Province branch, with three of his salesmen, Messrs. C. Dutrizac, T. S. Preston, and A. Martel; W. E. Nolan, F. H. Whitcombe, and H. A. Davis, Ontario salesmen, and C. K. Walker and C. Withers, Toronto salesmen. Mr. Geo. B. Levis, sales manager of the company, was not in attendance, as he has enlisted in the air service for the duration of the war. During Mr. Levis' absence Mr. H. J. Walker has taken up some of the details of the department, and S. B. Trainer is acting sales manager.

On December 28th the salesmen were taken to the new milk powder plant at Burford, Ont., and were shown all the processes of producing milk powder from fresh liquid milk. This experience was of much value to them and greatly increased their enthusiasm in their work. On December 29th the conference discussed selling details, such as the use of Milkstock, separated milk powder, by bakers, confectioners, ice-cream manufacturers, dairies and creameries; the use of Trumilk, the whole milk powder, particularly in regard to the production of milk chocolate and high grade confectionery; and the production and use of Trucream, which can be dissolved in the proper proportions to produce the same product as that from which it was produced, and therefore can be used wherever fresh liquid cream is called for. Special attention was given to the discussion of Klim, the domestic milk powder, which has been made the subject of an advertising campaign since October 1st. The best means of marketing Klim and educating the public to its use were thoroughly discussed.

Canadian Milk Products Limited, has met with striking success since establishing its definite and energetic advertising and selling campaign and the outlook for continued business expansion is exceptionally bright.

Expecting Improved Demand

Simpson, Clapp & Co., New York, N.Y., in their market letter of January 2, say: "With the holiday season over and as soon as inventories are completed we look for a better demand in the near future. It is possible that with government control of transportation, which heretofore was only available for government business, congestion will be relieved to a great extent. This should have a desired effect with buyers if the impression prevails that shipments will come along with better despatch."

The Northern Spruce Situation

In a recent interview with E. R. Safford, Jr., of the A. Sherman Lumber Company, manufacturers and wholesalers of spruce, white pine, etc., Mr. Safford stated that from present reports and appearances the Canadian mills are looking for a strong advance in prices on next season's cut, which he believes is warranted by the great increased cost of production. Stocks are available in limited supply, and, with the direct and indirect demands for government and war purposes it is his opinion that the future market gives every indication of a steady advance. He also feels that high prices will in all probability limit the usual building activity next year, and therefore does not look for very much change in the lath and shingle situation.

WANTED & FOR SALE DEPARTMENT

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line (14 agate lines make one inch.) \$2.10 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word, net. Cash must accompany the order. Minimum charge 50 cents.

Advertisements must be received not later than the 10th and 20th of each month to insure insertion in the subsequent issue.

Wanted-Lumber

White Pine Wanted

Always in the market for good White Pine. Please write us.

The Fisher & Wilson Company,
1-t.f. Cleveland, O.

Basswood Wanted

No. 2 Common and Mill Cull. Winter cut preferred. Apply Firstbrook Brothers, Ltd., Toronto, Ont. 8-t.f.

Wanted

Large size Elm Logs wanted. Address P. O. Box 5, Papineauville, Que. 21-2

Wanted

Log run stocks of Hardwoods and Pine. Spot cash soon as loaded, and before shipment. Address Box 664, Canada Lumberman, Toronto, Ont. 2-2

Basswood Wanted

Log Run and No. 2 Common and Mill Culls. Also Spruce and Pine Lumber.

Apply J. P. Abel, Fortin & Co.,
2-2 Maisonneuve (Montreal), Que.

Hardwood Logs Wanted

Rock Elm, Maple, White Ash, Shellbark Hickory, Soft Elm and White Beech, in car lots. Cut 10 ft., 12 ft. and 14 ft. long. Highest market price paid. Address,

St. Marys Wood Specialty Co., Limited,
2-3 St. Marys, Ont.

Ash and Elm Wanted

One inch Brown Ash and 3 inch Elm, dry or sawn to order. Also buy Birch, Maple, Basswood, Beech. We send inspector.

Wayne Lumber Company,
1-2 44 Whitehall Street,
New York, N. Y.

For Sale-Lumber

Lumber For Sale

Two cars 4 x 4 Maple Boxed Hearts.
One car 5 x 5 Maple Boxed Hearts.
One car 6 x 6 Maple Boxed Hearts.
Seven cars Fir Doors.
Three cars Fir Columns.

GEO. C. GOODFELLOW,
c Montreal, Que.

Lumber and Posts For Sale

2 cars of 1 x 4 and 5 White Pine.
2 " of 1 x 6 White Pine.
3 " of 1 x 8 White Pine.
1 " of 5/4 x 4, 5 and 6 White Pine.
1 " of 5/4 x 8 White Pine.
1/2 " 5/4 x 10 and 12 White Pine.
1/2 " 5/4 and 6/4 good shorts.
1/2 " 8/4 good shorts.
2 " 5/4 and 6/4 good strips.
2 " Lath, Mill Run.
2 " 2 x 10 Merchantable Hemlock.
1 " 1 x 9 Merchantable Hemlock.
3 " 1 x 10 Merchantable Hemlock.
200 M. ft. 2 x 4-6 and 8 Norway.
15 cars peeled cedar posts, 8 ft.

F. MCGIBBON & SONS,
2-2 Sarnia, Ont.

For Sale-Machinery

For Sale

Very fine 18 in. and 32 in. x 42 in. Cross Compound "Brown" Engine, approximately 400 h.p., built by Polson Iron Works. Has 44 in. x 16 ft. Belt Pulley. Splendid condition. Immediate delivery. Box 654, Canada Lumberman, Toronto. 24-t.f.

36 Inch Planing Mill Exhauster

Also Box Board Matcher, chain feed, Shimer heads. Canada Machinery Corporation. Splendid condition.

J. P. ABEL, FORTIN & CO.,

379 Desjardins St.,
2-2 Maisonneuve (Montreal) Que.

Machinery For Sale

75 h.p. also 100 h.p. engine, heavy log jack and chain, Hamilton 3 block carriage, saw frame, 4 saw trimmer, Berlin No. 94 Planer, 12-in. 4 side Sticker, 30-in. bracket saw, shaper, automatic saw sharpener, Murray lath bolter, Rogers lath machine. Good condition.

VIGARS-SHEAR LUMBER CO.,
24-3 Port Arthur, Ont.

Machinery For Sale

Light Planer, Matcher and Moulder.
Variety Trim Saw.
Power Feed Rip Saw.
36 in. Band Saw.
12 in. Heavy Moulder.
12 in. Jointer.
Three Drum Sander.
Other Woodworking Machinery.

A. J. LINDSAY,
2-5 90 Pembroke Street,
Toronto, Ont.

Woodworking Machinery

Band Saws
1-36 in. J. A. Fay & Company.
1-48 in. J. A. Fay & Company.
Band Resaws
1-54 in. and 1 72-in. Gilbert.
1-60 in. single and 1 60 in. double Fischer.
Planers
1-30x12 Endless Bed Double Surfer.
1-30x10 Money Maker Double Surfer.
1-27x8 J. A. Fay & Co., Double Surfer.
1-26x7 Hoyt & Bros. Co. Double Surfer.
3-Planers and Matchers.
Many other woodworking machines.
Corliss and automatic and slide valve engines.
Tubular and water tube boilers.
Belting, shafting, pulleys and hangers.
Low prices to close out the above second-hand machinery.

Cleveland Belting & Machinery Co.,
2-2 Cleveland, Ohio.

Steel Rails For Sale

A small quantity of 20 lb. light re-laying rails, for sale for immediate delivery. Apply Box 651, Canada Lumberman, Toronto. 23-4

For Sale

Ten sets of heavy log sleighs complete, with chains.

Canada Pine Lumber Co., Ltd.,
2-2 Kearney, Canada.

Wanted-Machinery

Wanted

SECOND-HAND PERKINS SHINGLE MACHINE, also shingle jointer. Send full particulars and quote best cash price.

The Pearce Company, Limited,
2-2 Marmora, Ont.

Machinery Wanted

New or second hand, if good condition:
1 pr. twin circulars—adjustable from 4 to 12".
30 iron rollers—8" or 10" x 20", and boxes.
1 lath outfit complete—not less than 50,000 in 10 hours.
1 smokestack (66 to 72" dia., 100 to 125 ft. long).
1 double drum hoist, complete with connections.
2 small engines 6 to 8 h.p., for tie loaders.
4 friction drives complete (6 to 8" face for conveyors).
1 set log kickers for double deck.
1 friction clutch 75 to 100 h.p.
Also a quantity of sprockets and chains, shafting and boxes.

Canadian Northern Railway System,
Eastern Lands Department,
1-1 5 Toronto Street,
Toronto, Ont.

Wanted-Employment

Advertisements under this heading one cent a word per insertion. Box No. 10 cents extra. Minimum charge 25 cents

CAPABLE, RELIABLE MILL FOREMAN wants position. Good references. Box 663, Canada Lumberman, Toronto, Ont. 2-4

YOUNG MAN, six years' experience as stenographer and bookkeeper in lumber business, desires change. Best of references. Box 629, Canada Lumberman, Toronto, Ont. 19-2

MARRIED MAN, 38 years of age, with 12 years' experience in logging office of large lumber firm, desires change. Available in July next. Best of recommendations. Box 665, Canada Lumberman, Toronto. 2-4

EXPERIENCED LUMBERMAN, married, wants position as manager. Still employed. Superintended lumber cut, estimate and shipment. Reason for change, company not doing further business. Reference given. Box 662, Canada Lumberman, Toronto, Ont. 2-7

Business Chances

Jobbers Wanted

We wish to let several contracts to take out logs on Berth No. 6, being broken front lying between the Magnetawan and French Rivers. This berth is all convenient to Canadian Northern Railway.

John Harrison & Sons Company, Limited,
Saw and Planing Mills,
9-t.f. Owen Sound, Ont.

Western Canada

HAVE YOU A PRODUCT TO SELL through the lumber dealers of Western Canada? We can represent you, as we are selling only lumber lines and are in direct touch with all dealers in Manitoba, Saskatchewan and Alberta. Now is the time to line up for 1918 business. Box 658, Canada Lumberman, Toronto, Ont. 2-3

For Sale

The plant and machinery formerly known as the Knechtel Wood Turning and Foundry Company. Fully equipped with machinery for woodworking and specialties. Has 40 H.P. Motor, as well as steam power. Liberal terms. Apply Clerk, Town Council, Southampton, Ont. 2-2

Tide-Water Stumpage For Sale or Exchange

For sale, or will exchange for good ranch or farm land, B. C. Tide-water stumpage, cruised and surveyed.

CARL BLOCK,
19-t.f. Peoria, Illinois.

"Business Chances"

Fine new mill-constructed concrete woodshop with modern equipment. Open to bid on standard or special wood products in quantities for the woodenware trade. Send blue prints, specification or models for quotations.

James Smart Mfg. Company, Limited,
2-5 Brockville, Ont.

Mill Plant and Limits For Sale

43 Miles Limits on 31 Mile Lake, Gattineau Valley, containing Basswood, Spruce, Fir, Pine, Cedar, Birch, Maple and Pulpwood. New Watrous 8 ft. Improved Double Cut Band Mill complete. Steam Alligator, Boats, Sleighs, Wagons, Harness, etc. For further particulars apply to

A. W. STEVENSON,
8-t.f. P. O. Box 2624,
Montreal, Que.

FOR SALE as a Going Concern Saw Mill and One Hundred Square Miles Crown Lands

Mill capable of sawing eight million superficial feet per year. New boilers, good engine and pumps, gang and rotary shingle and lath machines and planer. Railway siding in yard, also water shipping.

This property is situated in a thriving centre where labor is available. Good general store, boarding house and other buildings in connection with property. Good reasons given for selling.

No one need apply except bona fide purchasers.

Apply, Lumber, Box 643, Canada Lumberman and Woodworker, Toronto, Ont. 22-t.f.

Spotting Freight Cars by Power

A very handy arrangement for spotting or moving freight cars short distances along a siding, when the siding is near the mill, consists of a wire cable running over and around pulleys to a drum which may be located in the mill

or wherever convenient, and driven either by belt or electric motor. While this idea is in use in some few plants, there are many more in which, if it were used, it would effect a big saving in labor and time.

Railroad switching crews are not always on hand when most needed, nor do they always spot cars just where you want them, and even when they do, it is frequently necessary to shift the cars along from time to time during the day as they are loaded or unloaded, whichever the case may be. The power cable is a convenient and economical solution of the problem. With it there is no necessity for calling out several of the workmen to laboriously push and "pinchbar" the car along by inches.—Mississippi Valley Lumberman.

The naval aircraft factory at the Philadelphia navy yard is completed and in operation. This plant, which covers three acres was begun in August, the structure completed in November, machinery installed and the keel of the first flying boat was laid ninety days after building work was begun. The plant, with equipment, cost about \$1,000,000.

HORSES

UNION STOCK YARDS

OF TORONTO, Limited

"Canada's Greatest Live Stock Market" Capital, \$1,500,000. Two Hundred Acres. Dundas St. cars to Keele St., West Toronto. Auction Sales every Wednesday. Private Sales Daily.

MONTREAL

Review of Current Trade Conditions

Ontario

Toronto wholesalers report that business is good, insofar as orders offering are concerned. They are finding it equally as good as that which prevailed previous to the holidays. The greatest drawback seems to be due to the fact that trade has caught pretty well up on dry lumber. Any lumber now being offered is stock that was late cut. Mill culls are very strong. Good lumber is strong, and lath, especially spruce lath, seems to be improving.

Manufacturers and wholesalers are still experiencing much trouble in getting stock moved. They have to put up a stiff fight to get cars, especially cars for shipment to United States points. A short time ago a report became current that the governments of Canada and the United States had come to an arrangement to return to the Canadian Government about 20,000 cars, but these cars have not been returned yet.

The building trade in Ontario has not improved. Most of the demand for lumber at the present time can be traced back to war orders or to the demand for lumber that is going into munition boxes. The demand from the United States is good. There has been quite a demand from the other side for lumber for later shipment, but there seems to be an inclination among Canadians to look for orders for immediate shipment. If there is any speculation to be done on the market, Canadians holding the stock feel that they are the ones to do it.

The cut in Ontario this year will probably be only about sixty per cent. of that of last year. One large operator who generally cuts about 40,000,000 feet, will only have about 15,000,000 feet this year. Another concern which usually takes out about 30,000,000 feet to 35,000,000 feet, will only take out 15,000,000 feet to 20,000,000 feet this year.

The export business overseas is still nil. Shippers are unable to get space. The only thing that is moving across the Atlantic is lumber for the British Government that has been purchased by the British Government direct and in a good many cases paid for long in advance of shipment.

The lumber market at Ottawa, although quiet, as is to be expected at this time of year, continues firm and the outlook is generally thought to be bright so far as demand and prices are concerned. The scarcity of dry stock is becoming rapidly more noticeable. Green stock also is in short supply. The shortage exists in practically all grades of spruce and red pine and in dry mill cull, box and mill run white pine. The car situation continues extremely discouraging and many mills are far behind in the shipment of their orders. The situation in the woods of the Ottawa Valley is most discouraging. Large numbers of men have been leaving the camps since the new year. John R. Booth reports that from two to three times the number of men necessary for the camps in other years have already been sent in this winter and yet the camps are not adequately manned. Nearly every camp in the Ottawa district is in the same box.

Eastern Canada

The lumber trade at St. John, N.B., is quiet, shipments to United States points are light, and enquiries also are very few. There is quite a probability, however, that good enquiries from the United States will develop in the near future. Spruce boards are practically off the St. John market. Refuse and culls are very scarce and are firm. Manufacturers report that prices of deals this year will have to be much higher to cover the increased cost of production. Lath and shingles are practically cleaned up at St. John. Pine lumber is in strong demand, but very scarce.

There is only one active spot in the lumber trade at Montreal, and that is the demand for export to the United States. A satisfactory volume of orders is being received from across the line, most of them being for uses connected with the war. Shipments of stock for this trade are fairly good, but many more orders could be obtained if better transportation were available. The demand for shipbuilding purposes has fallen off greatly on account of stocks having been ordered for all shipbuilding contracts at present on hand. Other local trade is very quiet. Further price advances are reported and still others are expected, as dry stock is very scarce and operating costs are now known to be much greater than those of last year. Estimates of the increased price for next year are from \$6 to \$8 per thousand feet for spruce and pine. Exemptions of men working in the bush are reported to have been made in many cases by the Military Tribunals. This may be a factor in preventing price advances

to limits beyond those that have been predicted. The building trade in Montreal showed a decrease of nearly \$1,000,000 in permits issued during the year 1917. During December the total was the lowest for any month during the year, namely, \$50,000.

In the New England States, business is tending more and more towards Government orders being filled and private trade being handicapped by the inability to obtain cars for shipment. Yard men, particularly the smaller ones, are buying very little lumber this winter, and are showing no disposition as yet to stock up for spring. Local building and jobbing business has been reduced to a minimum. The outlook for local trade during 1918 is that it will not be as good as it was during 1917.

The shingle market at Boston is showing a fair amount of activity, particularly in connection with second clears. It looks as if consumers are seeking to buy something cheap while the market is showing a strong tendency to advance. Red cedar shingles are rather quiet. Prices of lath are discouraging from the dealer's viewpoint.

Reports received by the Canada Lumberman from Boston, Mass., state that the early arrival of severe winter weather, together with the great falling off in building operations, have put a stop to nearly all lumber business, and the yards are doing practically nothing. There is no incentive, therefore, for the yards to buy any more stock at this time, and a very quiet winter is expected.

United States

The most important matter of discussion among United States lumbermen is whether the taking over of the railroads by the government will result in improvement in the car situation. There is a tendency to believe that when the government has passed through the first difficulties of organizing the situation, improvement will develop and that lumber shippers will feel the benefit. Most shippers assert vigorously that shipping conditions could not be worse than they are today. Embargoes are reported in many districts, interfering with local trade conditions in large centres.

There is a feeling that not much change can be expected in trade conditions during the month of January, but a hopeful opinion is held in many quarters regarding the outlook for a somewhat better building situation in the spring than that of last spring. At Chicago, for instance, the outlook in connection with buying of northern pine for spring trade is encouraging. Stocks are light and will continue so. Even with all northern pine items at high prices, a good spring demand is expected. The conclusion of the inventory season with retailers is counted upon to develop a buying movement of fair size. At Buffalo, the white pine market is very strong. Some wholesalers have advanced their prices about \$5 on practically all of the list. This is the result of a stiff market at the mills. Stocks have become low at mill points generally, and manufacturers appear unwilling to sell without receiving large advances in prices. The demand for white pine at Buffalo is fair in nearly all grades, and strong for box lumber. The lack of cars is hindering the wholesale trade to a great extent. The outlook, for trade in northern pine at Minneapolis is good, although building operations have shown a large decrease. The factory demand continues strong and is expected to do so throughout the next few months and to take care of surplus stocks. Northern pine stocks today are probably lower than they have been in any recent previous years on January 1st. Retailers at Minneapolis are showing a disposition to keep closely in touch with the market in order to be able to protect themselves against a possible shortage. Actual transactions today, however, are very light. Stocks of northern pine have been moving satisfactorily at New York and prices are firm. Yard enquiries are light, but factory trade is active. Transportation difficulties are limiting the volume of trade at New York, as elsewhere. The prospect of still higher white pine prices this year is inducing many retailers to consider the wisdom of securing a fair amount of stock.

The embargo situation is a strong handicap upon the yellow pine trade at present. Many mills, for instance, are unable to accept business for Chicago delivery. Embargoes are also affecting many points east of the Mississippi River and north of the Ohio. The demand for yellow pine is fairly strong from country yards and factories. Slight advances on some items are reported and small decreases in others. Apparently the market is being readjusted to a slight extent with an upward tendency. Very little business in yellow pine is reported at Buffalo, as wholesalers find it almost impossible to obtain stocks. Enquiries have been light of late; severe weather, holidays, etc., inter-

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

fering with the demand. Prices of yellow pine at New York are strong. There is a good enquiry from shipbuilding and dock trade. Wholesalers are not quoting much on this line of business, however, not knowing where to obtain stock for their customers.

The hardwood situation at Cincinnati is quite as strong as at any time during the past six months. Stocks are much reduced and production conditions are reported to be less satisfactory than during any December in many previous years. The government demand continues on a large scale. White oak bill stocks are sold up beyond production. Heavy stocks of ash are very low. Chestnut, hickory and most of the other hardwoods are also much depleted. Stocks of walnut are not nearly sufficient to meet the demand and gum is said to be almost out of the market at Cincinnati as there has been a very urgent demand from furniture and box factories. The hardwood trade at Buffalo is not very active at present, but there is a fair amount of war order business. Southern stocks are hard to obtain on account of the railroad embargoes. Hemlock at Buffalo is quite firm, but the demand is not as good as usual at this season of the year. Improvement is expected when weather is more favorable.

Great Britain

Importers in the United Kingdom are now concerning themselves in connection with next season's trade. They are looking forward to some arrangement being made in this connection which will make it possible for them to carry on a moderate amount of trade. Severe criticism and complaint has prevailed for some time, on all sides, regarding this matter, as it is thought that the government erred in taking away the import business entirely from the trade. The situation as it stands is extremely hard upon a very large section of the trade.

The strongest demand probably for any kind of imported wood

in Great Britain is that for silver spruce coming from the Pacific Coast of North America, largely from British Columbia, for use in the manufacture of airplanes. Important steps are now being taken to provide for larger supplies of this wood reaching Great Britain. Before long it is probable that the output will be greatly increased. A great deal of interest has been excited recently in London by the advance in the rate of exchange between Great Britain and Scandinavia, which has made it possible to work out actual costs and arrive at a definite idea of the profit obtainable, provided, of course, that the goods can be delivered to London.

The London Chamber of Commerce recently decided to include in the programme of the Associated Chambers' annual meeting, in March, a resolution "viewing with apprehension the methods which have been adopted by the government in connection with the control of trade and industry as affecting the legitimate business of manufacturers, merchants and traders." Timber merchants both in London and in other large importing centres feel that they have a right, along with other merchants, to urge that the restrictive methods now in vogue shall be lifted at the earliest possible moment after the cessation of hostilities. There has been much concern over the report that the government is considering a proposal to extend its control for a period of three years after the conclusion of peace.

No special interest attaches to the lumber trade situation at Liverpool. Spot trading has not shown any tendency towards improvement. The outlook for shipments of spruce from Nova Scotia and New Brunswick is unchanged. The stock of spruce deals and battens at Liverpool and Manchester is much below normal, and only a small fraction of it is privately held. A little business continues to be done at Manchester, not only in imported timbers, but also in native timbers.

Market Correspondence

**SPECIAL REPORTS
ON CONDITIONS AT
HOME AND ABROAD**

St. John Markets—Higher Prices Essential

St. John, N.B., Jan. 8.—(Special to the Canada Lumberman).—At the moment the lumber trade at St. John is very dormant, due to many of the usual war conditions, but aggravated by the usual first of the year and holiday tieups. Also during the last two weeks we have passed through the severest winter weather known in this section for many years. All these conditions tend to stop outdoor work. All the sawmills are idle, and are going through their usual winter repairs and overhauling. Shipments to United States points from St. John at the present time are almost nil, as practically all orders have been shipped out and enquiries for stocks are not coming in very freely, although it would not be surprising at any moment in the near future to have large enquiries from the American side of the line; but as far as St. John is concerned there are practically no stocks of American sizes offering.

Very few sales have been made, but no weakening has taken place, and prices remain much as they were a month ago, viz., short lengths, 10 to 16 ft., 2 x 3 and 4 in., are bringing \$26 to \$27, sized; 2 x 5, 6 and 7 in. are bringing about the same; 2 x 8 in., \$29 to \$30; 2 x 9 in., \$31; 2 x 10 in., \$35, all on cars, St. John.

Spruce boards are impossible to find; if any mills have them they are asking \$32 and upwards at the mill.

Refuse or culls are also very scarce, and are demanding from \$16 to \$20 per M., on cars at mills.

As far as the English market is concerned, very little can be reported. They certainly need the stocks in the United Kingdom, but can find no way to transport the material, as all boats are under government control and are carrying only lumber for government purposes. It is impossible to quote any prices, but if any deals are sold for the coming season the manufacturers must certainly have a very much higher price than a year ago, as logging in this section and on the headwaters of the St. John has been more expensive this year than ever before. There is this certainty to date, that the millmen cannot sell at last year's prices and make anything but a loss.

Men are asking at least \$20 per month more than a year ago. Rates are \$1 per bushel, and going higher. Supplies of all kinds are going up steadily, with the cost of getting supplies into camps also increasing. Besides these things, the men are not turning out as good day's work and more men are required to do the same work than ever before. All these things must produce a higher cost for logs, and no doubt the same will apply to the sawing when logs arrive at the mills, to say nothing of the extra cost there will be in driving them down the rivers.

Deals should bring at least \$32 and upwards for 3 x 4, 5, 6, with

\$35 for the 3 x 7 and 8 in., while \$45 is not an unfair price for 9 and 11 x 3 in. If transportation could be provided, certainly the few deals that will be sawn at St. John next season would be readily absorbed at these or higher prices, for it is certain that the quantity of logs for sawing will be much less than a year ago. Woods operations are not turning out the quantities of logs anticipated, and it is yet too early to any more than guess, but it is thought that at least a 25 per cent. reduction will occur this year.

Laths and shingles are about cleaned up at St. John. Laths have been weak all through the summer, the average price being about \$3 per M., while shingles have been firm, extras selling at \$4.70, clears \$4.30, second clears \$3.50, extra No. 1's \$2, f.o.b. cars. Cedar logs are scarce for next season's sawing, and only outside shingles can be depended upon for local trade, as not a low-grade shingle of St. John manufacture remains at the mills.

Pine lumber is being eagerly sought for, but is very scarce, and from \$10 to \$15 per M. over last year's prices will have to be realized to produce any profit.

Ottawa Markets—Woods Situation Discouraging

January 10th.—(Special to the Canada Lumberman).—A period of quietness marked the Ottawa lumber market during the first fortnight of 1918. The outlook for this year, dealers and some manufacturers agree, is bright. Prices will probably advance. The market remained firm over the holiday period. Inquiries and business generally slackened, as is to be expected at this period of the year. Most of the mills and lumber dealers were busy stock-taking and closing their books for the fiscal year.

A marked scarcity of stock (dry stock especially) is becoming noticeable. The principal grades are dry mill cull, box, and mill run, all grades of spruce and all grades of red pine. The shortage is attributed to the large amount of such woods used in the manufacture of shell boxes.

The limited supply of cars for shipment continues. At some mills orders are reported as being "away behind." The extreme cold weather which prevailed during the last two days of 1917 and the first four of this year increased the difficulty in moving stocks. The temperature was 31 degrees below zero, the lowest that has prevailed at Ottawa for seventeen years. The cold weather also caused a heavy run on coal, and wood fuel was in much demand and brought high prices.

The outlook for woods operations is growing more discouraging. Lumbermen report that the men are coming out of the woods all the time in large numbers. Mr. P. C. Walker, of Shepard and

E. M. NICHOLSON & CO.

202 Board of Trade Building

MONTREAL

Morse, announces that the heavy migration of lumberjacks during the past month will reduce the whole season's cut from twenty-five to thirty-five per cent.

Operators are at a loss to explain just why the woodsmen are leaving the camps so soon after entrance, and in such large numbers. In one camp, it is cited, a letter arrived from Gaspé telling some of the men to come home. Shortly afterwards over a quarter of the employees left camp.

Mr. Jackson C. Booth, of John R. Booth, states that from two to three times the number of men needed to man the lumber camps in other years have already been sent in this winter. Through migrations, early January found the woods camps hardly adequately manned. "I cannot explain it. Nearly every lumberman in the Ottawa Valley is in the same boat. The men give no excuse for quitting. After being in camp a few days they pack up and move along," said Mr. Booth, to the Canada Lumberman.

The decline in woods labor forces may not only have a serious effect on the season's cut, but may cause considerable loss through unused camp supplies.

No new issue of tenders or orders placed for shell boxes has been reported from the Imperial Munitions Board.

The McAuliffe Davis Lumber Company was busy taking stock during the first ten days of the month. The company reports having had a good turnover, but cannot yet tell what its profits amounted to. This company reports that retail demand for lumber as being slow.

Gilmour and Company report a firm market. Orders are keeping up fairly well. "There is no question that a shortage of stock is coming," reports Mr. Gilmour.

Estate of James Davidson resumed operations January 2nd, after a ten-day shutdown for repairs. No change in the woods operations or factory work is reported.

The Rideau Lumber Company complains of a shortage of cars. "It is easy enough to get orders, but we cannot get the cars for shipment," is the report from this company.

There has been little or no change in conditions or operations with the other mills and companies.

Montreal Trade—U. S. Demand Strong

Montreal, January 11—(Special to the Canada Lumberman):—The American section of the lumber trade is the only one to show any activity. Orders from over the border are satisfactory, many of them being for war purposes. An even better business could be transacted if the car situation were more favorable. Local trade is very restricted, due to the slackness in building, and to the let-up in the demand for shipbuilding purposes.

Prices have advanced again, and most lumbermen expect a still further stiffening in values, owing to the scarcity of dry stock and also to the rise in the cost of getting out the logs. One prominent manufacturer states that in his opinion high grades of pine will be from \$8 to \$10 per thousand feet higher, as compared with last year, and the talk generally is that from \$6 to \$8 advance on spruce and pine may be looked for.

The government are reported to have given directions for liberal exemptions of men engaged in the bush and in manufacturing lumber. This is on the ground that to conscript all such men would paralyze an industry necessary for the welfare of the country, and would be harmful to the Allies. Temporary exemptions have been given to a large number of men in the bush in this province.

The condition in the building trade last year may be judged from the total permits now issued. For the 12 months, the value was \$4,387,638 (a decrease of \$946,546), of which \$3,252,757 was for new buildings, and the balance for repairs. Last month was the lowest for the year, being only \$50,140. The 12 months' total was the smallest since 1904, and makes a very poor showing as compared with boom year of 1913, when the permits reached \$27,037,297.

The car shortage is affecting the pulp and paper industry. Price Bros. have closed down their pulp mill at Kenogami, and other plants in the same district and in the St. Maurice Valley are also affected in the matter of output and of transporting their goods.

Reduced Cut in New Brunswick

Present indications point to a greatly reduced quantity of timber felled in New Brunswick during the coming winter as compared with the ordinary average aggregate. Two reasons are to be assigned for the anticipated shortage in the 1917-18 cut—scarcity of labor and transportation difficulties, says E. Verne Richardson, United States consul at Moncton, N.B., reporting to the Department of Commerce.

The leading operators of the province are to-day forecasting an extraordinarily small total cut, probably not more than 50 per cent. of that of recent years.

The effect of the existing transportation problem on the lumber-

**HUTHER BROS. SAW
MFG. COMPANY, Inc.**

1103 University Ave.
ROCHESTER, N. Y.

ing industry is one easily understood. Recent estimates of the lumber cut and awaiting shipment at points in New Brunswick and the adjacent counties of Nova Scotia place the total at 300,000,000 feet. Assuming that these figures somewhat exaggerate, it is still manifest that there is little to encourage operations on any extensive scale in the near future. That all this lumber is awaiting transportation is due to shortage of railway cars and vessels for the coastwise trade and the restrictions now in force against oversea shipments. Were stocks of lumber now on hand less and prospects for moving them brighter, greater efforts would be made to secure labor for the lumber camps, for current market prices are high, both in Canada's upper provinces and in the United States.

One need only recall that the lumber industry of New Brunswick represents an annual distribution of about \$15,000,000 among those directly and indirectly concerned with it to understand how seriously any interference with the winter's operations in the woods affects the general economic life of the province.

Trade Conditions in New England

Trade conditions in New England, as seen by the Shepard and Morse Lumber Company, Boston, Mass., are outlined in the following extract from a letter received by the Canada Lumberman, under date of January 7th:—

"Conditions seem to be gradually shaping themselves so that people who have government orders can get their stock shipped forward by obtaining transportation facilities, but a very large portion of the general trade is without transportation. For shipments of lumber from the New England States to other points in New England, or New York State, or New Jersey, we think the service has been fairly good, and roads like the Boston & Maine, Bangor & Aroostook, and the Maine Central are giving their shippers very fair service and a reasonable supply of cars. We think orders are fairly well taken care of.

"We think the yard men, particularly the smaller yard men, are buying very little lumber this winter and do not have much courage to stock up for spring. The local building and jobbing trade is reduced to a minimum, and when yard men are busy at all, it is on government work of one kind or another, and we personally do not look for nearly as good a year in 1918 as we hope it will have shown to have been in 1917, although we have not figured up results as yet. Government purchases are getting to be very close to cost prices

today and as they are giving the community most of the business they receive, the profits, we think, will be quite small!

"Also we find it a great difficulty to keep up the logging end and get out a reasonable supply for the coming year. We cannot help but feel that, with all the conditions to contend with, the general lumber trade will be considerably reduced in 1918. In fact, our orders would have warranted our doing nearly fifty per cent. more business during the last three months than we have been able to do, owing to the fact that nothing could be shipped from the south or southwest without government requisition order numbers, and transportation did not permit of forty per cent. of the normal being done from Canada into this section of the country.

"Of course, this statement is based on the present existing conditions and the continuance of the war. What might happen if the war should suddenly be brought to an end, no one knows, but the writer would look for a momentary decided lull in activities, and prices would rapidly fall very much nearer to normal, and then when conditions had righted themselves, business would start in again, and there would be a steady, healthy business for several years, this business being that necessitated by the rebuilding and general restoration of damage done during the war, and that necessitated by catching up with the general growth in this country which has been so much retarded by present conditions."

U. S. Will Require Large Quantity of Wooden Boxes

The requirements of the United States Government for wooden packing boxes for the handling of munitions, commissary supplies and other materials, are very great, and in order to enable the box industry to meet the needs of the government it has been decided to establish an Emergency Bureau representing the box manufacturers throughout the country. It is said that the War Department is buying at least twenty per cent. of the wooden boxes produced in the United States, and that the government's demands for boxes will be very large during the entire period of the war. The box manufacturers will maintain the Emergency Bureau at their own expense so long as necessary, so as to render the government the most satisfactory service in the allotment of orders, and to determine through conference with the proper government bureaus what practical specifications and fair prices shall be on all government requirements. This is the first time that the box manufacturing industry has been fully mobilized.

Increase Your Cut, Make your Lumber Sell More Readily, Get More for it per M and Save Freight by installing a

WOOD BROKERS

FOR EVERY CLASS OF TIMBER

Head Office: HULL, England

To the Lumber Companies of Canada:

You have the Goods. Place your Lists with full particulars in our hands. We are in daily touch with all the Buyers in the United Kingdom.

PLEASE NOTE.—We pay cash against all documents, and take the whole of the Delcredere risk on Buyers.

Install a KRAFT SODA MILL

CANADA has another big war opportunity: Great Britain needs more wood pulp. Install a small Soda Pulp Plant and Supply this need by converting your Slats, Tops, Bottoms and waste wood around the Saw Mill into pulp. We can dispose of any amount. Previous sources of supply in Sweden, etc., have recently been withdrawn and Canada now has a free field in Great Britain to market unlimited quantities of wood pulp. We can arrange contracts for long periods. The cost of installing plant is small and you make a sure profit from waste material.

Write to-day for further details

Becker & Co., Ltd.

Your Bit

You have probably invested in Victory Bonds, and contributed to the Red Cross. Perhaps you are economizing in many ways also; but there is still another way to help—save power.

Chapman Double Ball Bearings

save 20 per cent of power by eliminating friction. If you are wasting power in transmission you are wasting coal—one of the articles the government requests us to conserve.

It is not necessary to shut down your plant to install Chapman Bearings. They are interchangeable with self oiling bearings of the same shaft size, and power is not the only thing they save.

Let us tell you more about them

Chapman Double Ball Bearing Co., Ltd.

337-351 Sorauren Avenue - Toronto

United States Hardwood Market Situation

The Hardwood Manufacturers' Association of the United States, in their market letter, under date of January 3rd, say:—This is a war market pure and simple. Priority order No. 5 effective the 12th day of December giving priority car supply, shipment and movement rights to certain fuel, food, feed and miscellaneous raw materials for government account, reduced commercial shipments to a marked degree, and about the only thing that is now moving is government business.

The news that the President has put the railroads under government control is welcome as a whole. The operation of the railroads as a thoroughly unified system is of fundamental importance to the success of the war. The immediate result will no doubt wipe out competitive conditions and provide for complete pooling of traffic equipment, terminals and trackage facilities, all of which we believe should materially improve the present traffic congestion.

The demand for hardwood lumber continues to increase with thick stock in oak, ash and hickory the outstanding feature of the market. The box makers are in the market for almost every kind of lumber that is suitable for that purpose. The extreme cold weather and attending railroad demoralization has played havoc with production during the past month. The outlook at present is for a hard winter, so that it will be impossible even to maintain the present rate of production which is estimated to be fifty per cent. below normal.

Building permits for the month of November show a loss of 39.7 per cent. as compared with the corresponding month a year ago. Heavy withdrawals of government deposits have given the money market a firmer tone, but without a perceptible change in rates; commercial paper is discounted at 5½ to 6 per cent. Business failures in November disclose a reduction of more than 20 per cent. from November of last year, while bank clearings for November show an increase of 1.2 per cent. over the same month last year and 39.5 per cent. over the same month in 1915.

This country's food crops generally, with the exception of wheat, established records in production this year, and their value far exceeds that of other years. The Washington forecast of the 1918 wheat crop shows a condition December 1st, 80 per cent. normal with the largest acreage ever sown.

There is nothing in the present outlook, says "Babson," which would indicate a serious slackening in general business during the coming months. The demand for most lines of merchandise should continue heavy. The greatest problem will be making shipments rather than selling.

Shipping Difficulties Controlling Trade in U. S.

F. S. Underhill, of Wistar, Underhill & Nixon, large manufacturing and wholesalers of Philadelphia, Pa., in a recent talk with a New York Lumber Trade Journal representative, made the following observations:

"When we come to discuss business conditions to-day, one feature stands out so prominently that all others are cast into a shadow thereby. We have very little occasion to discuss values or demand, but we do have constant occasion to discuss shipping conditions. We have tried to be careful in our transactions to watch the general shipping condition, and yet with all our carefulness, because the situation has developed rapidly along lines never before experienced in the history of the country, the railroad situation has caused us very much embarrassment. We have plenty of orders on our files and have the lumber with which to fill the orders, and have been working from early morning to late at night on the one proposition of trying to get them shipped, coaxing, pleading, urging—not only the mills with whom we have contracts, but the railroad authorities that have more control over the situation than the mill—to help us complete our contracts for the delivery of the goods. We have spent many night hours working on old orders endeavoring to give old orders preference in every possible way over new ones. The situation, of course, on the railroads has now become very critical, and it is sometimes difficult to make our customers, especially those who are not located so they can be in touch with the railroad situation, understand why their goods have not been shipped.

"Inasmuch as our government is needing the services of the railroads to their very utmost capacity for the purpose of 'winning the war,' we believe that we, like all other good citizens and good lumbermen, will recognize that there is one great business before the country to-day, and that is to 'win the war,' and to that end, not only agreeing to, but helping the efforts of the government (whatever they may be and however seriously they affect us in our business transactions) to speed their preparations for getting 'over' our grand army and splendid fleet of fighting vessels, as well as merchant vessels. To co-operate in order that no possible effort may be spared to bring about the ultimate triumph of the just cause in which we are engaged, namely, to 'make the world safe for humanity.'"

"Living the out door life in comfort."

The Arctic Eiderdown Sleeping Robe

GUARANTEES PERFECT SATISFACTION—ALWAYS.

Of the thousands of these robes sold we have never had one returned, nor in any way condemned.

The Arctic Eiderdown Robe is absolutely wind and moisture proof. Frost cannot penetrate it. It is positively sanitary—the more sun and air it is given the more resilient and thicker it will become.

Hunters, Motorists, Woodsmen and Lumbermen should never be without one. It can be slept on, in or under.

Its weight is almost nil, while its advantages are many.

EDGINGS

Ontario

Fire recently destroyed the woodworking plant belonging to the Ontario Woodworking Company, 87 Richmond Street West, Toronto.

The Ontario Hardwoods Limited, has been incorporated with head office care of Mr. Geo. Glendenning, Room 405, Standard Bank Building, Toronto, Ont., and capital stock of \$40,000, to cut and manufacture timber, lumber, ties, etc.

The Peterboro Canoe Company, 290 Water Street, Peterboro, Ont., recently lost their boat works by fire. The machine shop and dry kiln were destroyed and the loss is estimated at \$45,000. The company expect to rebuild at once.

Fire recently destroyed several thousand dollars' worth of woodwork prepared for vessels under construction at the plant of the Port Arthur Shipbuilding Company, Port Arthur, Ont. The damage was confined to the contents of the dry kiln.

The Spruce Falls Pulp and Paper Company, Limited, whose head office is at 84 King Street East, Toronto, have appointed Mr. Geo. F. Hardy, 309 Broadway, New York City, as consulting engineer in connection with their new plant on the Kapuskasing Limits in New Ontario.

The Port Arthur Pulp and Paper Company, of Port Arthur, Ont., whose new sixty-ton sulphite plant will be in operation this month, has established a pulp wood camp at Sucker Creek, some thirty miles east of Port Arthur. C. A. Gardner has been appointed woods superintendent of the company. The Port Arthur Pulp and Paper Company has elected its board of directors for the coming year. I. H. Weldon, of Toronto, is president; S. F. Duncan, secretary-treasurer. The other directors are: J. M. Mackie, Montreal; A. B. Connable and S. B. Munroe, Kalamazoo, Mich.

The Canadian Aeroplanes Company, Dufferin Street and Lappin Avenue, Toronto, have awarded sub-contracts in connection with the addition to their new aeroplane factory, which is to cost \$30,000. The general contractors are Jackson-Lewis Company, Limited, 78 Adelaide Street West. The contract for plumbing and heating has been awarded to Bennett and Wright Company, 72 Queen Street East, and the roofing contract to Carmichael Waterproofing Company, Limited, 267 Delaware Ave. The addition will be one new storey, steel, frame and brick construction, tar and gravel roofing, electric lighting.

Reports have recently appeared in the press to the effect that the Lake Superior Corporation is planning for the erection of pulp mills along the line of the Algoma Central and Hudson Bay Railway. The company informs the Canada Lumberman that it has large timber holdings in this district, and is always trying to interest parties in the cutting of pine, hardwoods, etc. It has no definite plans, however, for building pulp mills along the line. At the present time the company is negotiating with a couple of lumber firms for the erection of sawmills, but arrangements have not become far enough advanced for the publication of detailed information.

The Colonial Lumber Company, Limited, Pembroke, Ont., report that they are now constructing a sawmill at Pembroke to take the place of the mill which they recently lost by fire. They have purchased the Petawawa Lumber Company's mill and are dismantling it. They will cut about 20,000,000 feet during the sawing season, at the new mill, on a day shift, and they hope to have the mill ready for operation by the first of May. The machinery installed includes one double cutting band saw, one Waterous twin slabber, one Kendall circular gang, one horizontal band resaw and the following equipment furnished by the Waterous Engine Works Company, Limited, Brantford, Ont.: log kicker, cant flips, rolls, edger, swing slab saw, shafting, pulleys and tighteners, conveyor drives, chain drives, roll drives, etc.

Eastern Canada

Work has been started on the shipbuilding plant at Meteghan River, N.S., belonging to Siffroi Robichan, Meteghan Centre, N.S. The owner will require spruce, pine, Douglas fir, hardwood, iron knees and bars, gasoline engines, pumps, windlass, etc.

A press despatch reports that Price Bros. & Company, Limited, Quebec, P.Q., have closed their pulp mills at Kenogami on account of the shortage of freight cars, and that unless some improvement is brought about very promptly, there will be a great shortage in the production of newsprint.

The Wilson Box Company, Limited, St. John, N.B., have purchased from James S. Robinson, Cambridge, N.B., all his timber areas, covering about 3,000 acres, together with his sawmill at Cambridge. The limits contain a large quantity of standing timber and will furnish the company with a valuable new source of supply of raw material for their steadily increasing box business.

The Wapske River Lumber Company has been formed with head office at Boston, Mass. The object of the company is to handle Canadian lumber

to better advantage in United States markets. Mr. F. B. Whitman, of the Wapskeheggen Lumber Company, Limited, Wapske, N.B., is the chief party interested. He will retain his former connections, but will now spend a considerable portion of his time in Boston and other United States and Canadian cities in connection with the work of the new company. Mr. A. E. Whitman, vice-president and local manager of the Wapskeheggen Lumber Company, Limited, is now devoting his entire time to the management of this company at Wapske, N.B.

Western Canada

The Tanner Lumber Company, Limited, has been incorporated with head office at Camrose, Alta., and capital stock of \$30,000.

A sawmill, with wharf and other structures, is to be established at Port Clements by the Graham Island Spruce & Cedar Company.

The Kootenay River Lumber Company, Limited, intend to apply for permission to change their name to "National Spruce Mills Limited."

Fire recently destroyed the sash and door factory of the Cranbrook Sash & Door Company at Cranbrook, B.C. Loss, \$40,000; insurance, \$6,000.

The Massett Lumber Company, Limited, has been incorporated with head office at Vancouver, B.C., and capital stock of \$200,000, to carry on business as timber merchants, sawmill, shingle mill and pulp mill owners, loggers, etc.

The Gwilt Lumber Company, Limited, has been incorporated, with head office at Courtenay, B.C., and capital stock of \$25,000, to carry on business as loggers, timber and lumber merchants, sawmill and shingle mill proprietors, etc.

The Kootenay Shingle Company, Limited, Salmo, B.C., report that they have rebuilt the mill and dry kiln which they lost by fire on July 11th. They have installed five shingle machines and intend to operate two shifts during the present year. This will give them an output of about 350,000 shingles every twenty-four hours.

Sealed tenders are being received by the Minister of Lands for British Columbia until the 31st day of January, 1918, for the purchase of License X1170, to cut 1,300,000 feet of spruce, cedar, hemlock and balsam on an area situated on Long Lake, Fraser Reach, Range 4, Coast District. Two years will be allowed for the removal of the timber. Further particulars may be obtained from the Chief Forester, Victoria, B.C.

Dahl & Falk, Limited, have been incorporated with head office at Vancouver, B.C., and capital stock of \$25,000, to acquire and take over the interest of Henry Dahl and Alfred Falk in a contract with the receiver of the Canadian Pacific Lumber Company, Limited, and other assets of or belonging to Dahl and Falk. The company will carry on business as timber merchants, sawmill operators and loggers, and as manufacturers of and dealers in timber, logs, lumber and wood of all kinds.

Alabama Hewn Oak Timbers for Canada

The S. K. Taylor Lumber Company, Mobile, Ala., whose advertisement appears elsewhere in this issue, are in a position to be of practical service to Canadian firms requiring prompt deliveries of small or large orders of Alabama hewn oak timber, which is the sole line at present being handled by this firm. The address of the company is Rooms 1 and 2, First National Bank Building, Mobile, Ala. Canadian firms which have requirements for hewn oak timber will do well to get into touch with them.

Toronto Dry Dock Company Officers

The Toronto Dry Dock Company, Limited, foot of Cherry Street, Toronto, an illustration of whose dock was published in the Canada Lumberman of November 15th, desire us to publish a list of the names of their officials, the list which appeared in our former issue not having been complete. Readers of the Canada Lumberman will be interested in knowing that the officials of the company are as follows:—Lawrence Solman, president; Fred R. Miller, vice-president; Harry J. Dixon, managing director; Major C. A. Boone, John J. Manley, John E. Russell, and Charles S. Boone, directors.

The Kiln-Drying of Lumber

The kiln-drying of lumber is the title of a practical and theoretical treatise, written by Harry Donald Tiemann, M.E., M.F., and published by J. B. Lippincott Company, Philadelphia and London, which has just been published. The contents include a study of the structure and properties of wood; common practices in drying, shrinkage, warping, and case-hardening; the principles of kiln-drying; circulation and the method of piling; special problems in drying; effect of different methods upon the strength of the wood; instruments useful in dry-kiln work; temperatures and humidities for drying various kinds of lumber, and an appendix devoted to a consideration of special woods for war uses. Illustrations are included, among them being many half-tones and diagrams.

Original "Dunbar" Machines

We are the original and the only makers of "Dunbar" Shingle Machines, Lath Machines, Clapboard Machines, Steam and Gasoline Logging Engines. Each is the best for its particular work. Are you using the best?

Lath Machine

From our many years of experience we evolved this "Dunbar" Original Lath Machine. Every improvement that could be suggested, every time-tested idea for the betterment of product and for greater speed, has been incorporated in this machine. We believe it has no equal, and there are a great number of mill men throughout Canada who share this belief with us. Carefully constructed of high grade materials and designed to work steadily under the hardest conditions.

Steam and Gasoline Logging Engines

Conditions in Canada necessitate an engine that will stand any amount of strain and hard work in the lumber industry. With this idea in mind we have brought out the "Dunbar" engines perhaps a little stronger than is really needed. They do their work easily and willingly, and stand a great amount of hard usage. Built entirely in Canada for the Canadian lumber trade.

Clapboard Machine

You will need no excuse for the quality of your product if you use the original "Dunbar" Clapboard Machine. Expert in every detail. This machine will give you the very best service under most trying conditions. It will turn out work without delays. It will need practically no repairs and will increase your output. We cannot recommend it too highly because it is giving this very service to lumbermen in all parts of this country.

Send for catalogues of any or all of these machines.

Hoisting Engines and Derricks

For the Rapid and Economical Handling of Logs and Heavy Timbers

Either in the Mill Yard or in the Woods, our Hoisting and Haulage Engines will pay for themselves many times over by the great saving they will effect in the labor costs.

We make these for direct drive by steam power, as shown, or for electric or gasoline drive where the use of steam is undesirable. We also make them for belt drive, to be run by the same power that operates the saw or other machinery.

Use Machinery in Place of Men, and so Reduce Your Operating Expenses.

MARSH & HENTHORN, Limited, BELLEVILLE, Ont.

A Good Belt Saves Money

THE money wasted in keeping a stretching belt taut amounts to a surprising figure. If you use "Goodhue Belts" in your mill or factory you can save most of this money because "Goodhue Belts" stretch less by 15 to 25 per cent. than any other belt. They are made from skillfully selected hides with the stretch taken out of each section before it is made up into the belt.

According to the conditions under which the belt is to run, we recommend "Extra," "Standard" or "Acme Waterproof" belts.

Send for further particulars and prices.

DANVILLE — QUEBEC.

FOR SPEEDY WORK

USE COMPRESSED AIR

FOR EXAMPLE:

"The erection of the frame work of the Rochester Com-bined 300 ton mill is nearing completion, and sets a new record in mill construction."

"Compressed air is used in boring all timbers and driving ship spikes. A Little Tugger Hoist is used in placing timbers."

"Two shifts of carpenters are employed, the night shift working by electric light. . . . About 500,000 ft. B.M. of timber will have been used."

"In spite of the scarcity of supplies, the construction engineer, believes the mill will be completed by November 1st."—
"Mining and Scientific Press."

The use of pneumatic tools on construction work has come to stay. Labor is scarce and early production is required from every plant in course of erection in this country. The "Pneumatic Way" has proved to be the best for rapid work at minimum expense.

The "Little David" Wood Borer and the Little Tugger Hoist will be shown in later issues. Watch for them.

Dayton Computing Scales are known the world over as the best for money on earth.
International Time Recorders are used in almost every progressive plant in existence.
Hollerith Tabulating Machines are recognized as one of the great machines of the age—mechanically classifying and sorting records in any conceivable way desired.
Our combined users are numbered in hundreds of thousands in every kind of business known.
Our \$2,000,000 capitalization in these times surely indicates our faith in Canada.

Shipment by car,
canal boat or
cargo.

Owing to constantly increasing sales we are anxious to establish new connections with Eastern Spruce mills, for shipment by car to Boston and New York markets, or by canal boat from Quebec to New York.

We also desire more connections with manufacturers of British Columbia red cedar shingles and cedar siding.

We will buy outright or sell on a 5 per cent. commission.

We manufacture Spruce at our own Mills at Portage, Maine, U. S. A., and therefore we know what big prices mean to the manufacturer

Douglas Fir

The Corbet Automatic Steam Towing Machines

The Corbet Automatic Steam Towing Machines are installed on a large number of the best Tugs on the Atlantic and Pacific Coasts and on the Great Lakes and have proved so satisfactory that not one of our customers would be without them under any circumstances as they have proved the best investment the owner ever made in equipping his tug. Why continue to be without our Towing Machine which will increase the efficiency and earning power of your tug?

Write for information, testimonials and prices.

The Corbet Foundry & Machine Co., Limited, OWEN SOUND, ONTARIO, CANADA

Utilization of Waste Wood

We have a wide experience in the design and construction of complete plants for the economical commercial using of waste woods

Plants Proved in Operation:

DISTILLATION PLANTS: Slabs, Limbs, etc.
ALCOHOL PLANTS: Sawdust, Shavings, etc.
PULP MILL EQUIPMENT: Soda, etc.
OXALIC ACID PLANTS: Sawdust, etc.
WASTE SULPHITE LIQUOR
FERMENTING PLANTS: Alcohol

NATIONAL Railway Motor CARS

For Passenger Service

We recommend this car highly for lumber companies operating a short line railway, as it is an ideal car for light passenger service, or tractor for hauling supplies, moving crews, etc. Frame is of 3 x 1½ x 1½ channel steel; axles 1½ inches with Hyatt roller bearings; 20 inch pressed steel wheels of extra strength. Four cylinder, four cycle, water cooled, 10-12 h. p. engine, equipped with Atwater-Kent ignition system, float feed carburetor with throttle and spark control, and kerosene attachment. We also equip the car with friction drive as it gives a variation of speed and power. Reverses by shifting friction wheel over center on the disc, and runs in either direction equally as well. Seats are nicely upholstered, with lazy backs; folding top with jiffy side and end curtains. The car is a complete job that will cut operating expenses in quarter.

Price Complete \$600.00 F.O.B. Factory.—If interested write us for complete descriptive matter or place order direct from this ad. 4L

Northwestern Motor Co., 1500 Spring Street Eau Claire, Wis.

ONTARIO

Canada's Banner Province

Ontario's timber production last year valued at \$26,774,937 or 40% of Canada's total output.

Pine production,	905,442,000 ft. B.M.
Pulpwood,	246,282 cords.
Railway Ties,	5,704,459.

Ontario's woodworking industries, using 34 different kinds of wood, provide a ready market for the lumberman. Eighty-two per cent. of lumber used in Ontario's industries purchased within the Province.

Ontario's vast resources offer unsurpassed opportunities to the lumberman.

For maps and full information regarding Ontario, apply to

Lacey Reports for the Timber Seller

It is no better commercial practice for you to sell a tract of timber (which may contain a million feet more than you think) on the basis of an old time "timber cruise" than it is for some one else to buy one (which may contain a million feet less than he thinks).

To be in a position to certainly realize the maximum on any scale is first to know exactly what you have to sell. Then a price means something.

A LACEY REPORT on your tract will give you the nearest approach to absolute knowledge of stumpage values possible by human means, and the very existence of your LACEY REPORT will justly give the buyer implicit confidence.

*The Babbitt Metal that's at the Front in Efficiency
and Economy*

HARRIS HEAVY PRESSURE

Being heavy Munition Makers, we appreciate information as to where the best Tools, Steel, Belting, Lathes, Furnaces, etc., can be obtained, the object being to get the best results in our work and we are pleased when manufacturers put us right. For the same reason we respectfully bring before you, Harris Heavy Pressure Babbitt Metal, knowing it to be the best that money or brains can make for all-round Machinery or Shafting Bearings. We emphasize this as we know you appreciate the word of a reliable firm. Years of service to the public of Canada prompts us to give the results of our knowledge of this Metal's qualities; it being both durable and moderate in price.

We Manufacture All Grades of Babbitt Metals.

BELTING EXPENSE REDUCED 40%

HOOVER STEEL BALL COMPANY
ANN ARBOR, MICH. 12/30/15.

The Graton & Knight Mfg. Co.,
264 E. Jefferson Ave.,
Detroit, Mich.

Gentlemen:-

We have practically eliminated all other leather belting from our works and are using Spartan Belting entirely on the Dry Grinders, which place we are sure is the most severe use for leather belting there is in the State of Michigan.

We have been experimenting with leather belting for the past three years to get a belt that would give us service. We have not limited ourselves to price on this belt. For this purpose the life of the belt ordinarily is short, therefore, it is our desire to buy the best belting that we can possibly obtain, regardless of price.

Our Engineer has advised us that Spartan Belting has in every way met with our expectation and this has reduced our belt expense approximately 40% within the past fifteen months. Within the past twelve months we have discontinued using all other makes and are using this Spartan Belt entirely as it has been the belt which has stood up for this particular purpose.

Very truly yours,
HOOVER STEEL BALL COMPANY,
J. M. Hoover
Vice President, Ann Arbor, Mich.

Spartan Belting is daily proving its efficiency in plants of every description—proving it so conclusively that Spartan is fast becoming the universal equipment for all drives where the physical conditions are quickly ruinous to ordinary belting.

The use of Spartan Belting in your mill will mean the solution of your Hard-drive problems—it will mean greater, more efficient and more economical service. Why not select one or more of your difficult drives and put Spartan to the test?

ATKINS

ALWAYS AHEAD!

The most advanced improvements in Saw manufacture have placed us far ahead in the manufacture of Saws for all uses.

Our Band and Circular Saws are worthy examples. They cut more timber—do it with less power and require less repair to be kept in perfect condition.

Economy in mill operation has proved their value. Put them through competitive tests with other Saws.

The Sterling quality of

Atkins Sterling Steel Saws

will overcome your difficulties.

**"ASBESTOL"
Gloves and Mittens**

Whenever you find the need for strong, serviceable work gloves and mittens you find "ASBESTOL" on the job.

In lumber camps everywhere they are extremely popular because of the splendid service they render the wearer.

"ASBESTOL" GLOVES and MITTENS protect the hands as they must be protected. The rough work of the lumber jack holds no perils for the hands that are clad in "ASBESTOL."

"ASBESTOL" will resist snow and water, heat or steam. They are always soft and pliable and comfortable at all times.

Wearing "ASBESTOL" Gloves and Mittens means absolute protection for the hands. It is insurance that every worker in the lumber camp needs.

Ask for "ASBESTOL"
 at your favorite store.

**EISENDRATH GLOVE COMPANY**

2001 Elston Ave., CHICAGO

LOGGING LOCOMOTIVES

Locomotives on trunk line railroads have the advantage of the best facilities for inspection and repairs.

Logging locomotives face different conditions. They must work day after day in the hardest service, and often in localities where repairs cannot be made without great inconvenience. That is why we build our logging locomotives from interchangeable stock parts. With this

system every part must fit every other locomotive of the same size and design, and long delays waiting for duplicate parts are avoided. Interchangeable parts kept on hand at our Works for prompt shipment

MONTREAL LOCOMOTIVE WORKS, LIMITED,

DOMINION EXPRESS BUILDING,

MONTREAL, CANADA.

Shipment From Stock

We have in stock STEAM FEEDS 10" x 36 ft. and 10" x 42 ft., as shown in the above cut.

Immediate shipment can be made of these or of machinery as follows:

- 1—Clipper Shingle Machine
- 1—Clipper Saw Jointer
- 2—Shingle Packing Boxes
- 1—No. 7 Jack Works (for portable mill)
- 2—No. 1 Jack Works
- 1—No. 5 Saw Frame (for portable mill)

1917 Model

KENDALL 1917 GANG

It takes cants from 4" to 12" thickness and at the rate of from 2500 to 3000 a day, will turn them into lumber, perfect in finish and cut evenly from end to end. Big capacity on small stuff and lumber cut better than is possible on Band Saw, Circular Saw or Vertical Gang are the distinguishing features of this machine.

"FROST KING" METAL

Our thirty-five years experience in metal mixing enables us to place on the market a babbitt that we believe to be absolutely perfect. For high speed machinery and engine work it is without an equal. It is specially designed for saw-mills, planing mills, threshing engines, traction engines, pumps, rolling mills, pulp machinery, and all classes of stationary engines. It is a high grade metal made of the very best selected stock, and carefully compounded.

If your dealer does not stock FROST KING send us a money order for your requirements. Price 30c per lb., Fort William and East; West of Fort William 35c per lb., delivered nearest railway station; packed in 30 lb. and 60 lb. boxes.

For extra duty, such as over-hanging saws, our TROJAN BABBITT will stand where all other metals will fail. Price, Fort William and East, 65c per lb.; West of Fort William, 70c, delivered to your nearest railway station; packed in 30 lb. and 60 lb. boxes.

"Make Friends"

WITH OUR OAK-TANNED LEATHER BELTING

**Guaranteed
Flawless**

The most particular process of Tanning our Belts makes them proof against stretching and preserves the full strength of the hide.

**McLAREN'S
BELTS
DO ALL
THAT IS
EXPECTED
OF
BELTS**

The sign of the oak leaf and acorn on your machinery belting means freedom from all troubles. Don't take our word for it—prove it yourself.

Equip your plant with McLaren made belting and you'll soon say along with many of the largest factories in Canada that it's the best belting by a long way that you've ever had. A trial convinces you how good our belting is. If you visited our Montreal factory you would marvel at the amount of work, care, and thought expended on every piece of belting before it receives the little—but all important—stamp

"GENUINE OAK."

We don't want your business without your friendship—we work hard to deserve both.

We believe in the quality of our belting. We want your confidence and also your business. We will be glad to put you in touch with a few of the firms now using our belting. Write or call.

Dear Sirs,—

We are pleased to be able to report to you that your No. 2 Automatic Steam Towing Machine, which has 1200 ft. of 1-inch dia. Steel Hawser, which you installed on our tug D.S. Pratt, is giving us first-class satisfaction. We have been using this machine two years and there is no doubt but that it is far ahead of the old manilla rope, both in cost and trouble of handling. We take pleasure in recommending same.

Yours truly,

"Well Bought is Half Sold"

We begin 1918—a new organization with an old experience.

We will distribute **Graves, Bigwood & Co.'s**

products and other well
known lines as presented
in this space heretofore.

We will offer regularly hereunder varied and interesting items. As a statement of our position please read this extract from the Canada Lumberman:

Old Wine in New Bottles

The incorporation of the Canadian General Lumber Company, Limited, formed to deal in lumber and other forest products, with its head office in Toronto and an eastern office at Montreal, is one of the latest announcements of interest to the trade. While this is a new concern, its personnel is of long acquaintance in the lumber business. It constitutes rather a realignment and extension of efforts and undertakings that are not new. In a sense, its reputation is established.

When in 1908 the Canadian Pacific Railway opened its Toronto-Sudbury line, Graves, Bigwood & Company, in the rail access given to their mills at Byng Inlet, seized the opportunity to develop a car business direct from the mills and to increase the intimacy of their acquaintance with the retail trade of Eastern Canada and the Northeastern States. To successfully serve, they established large sorting facilities and a well-equipped planing mill. To utilize their lower grades and trimmings they installed a modern box shook factory. These facilities, their splendid manufacture, careful grading and service, brought speedy recognition by purchasers and each year an increased clientele.

The allied interests of Graves, Bigwood & Company had long been known as purchasers of mill cuts in Canada and the Michigan and Minnesota sections. It followed as a natural sequence to meet the activities of their sales force that Graves, Bigwood & Company should supplement their own stock with well-known lines to which they had entree. As a result, they have drawn on all the sawmill sections of Ontario, Quebec, and New Brunswick. In 1910 they started an operation at Deer Lake, Ont., on the C.N.O. Railway, to cut hardwoods. Thus they joined themselves to that field, and hardwoods have become a feature in their business.

All of this history is antecedent to and explanatory of the new organization. In order to give increased scope to the selling force and extend the merchandising features it has been decided to divorce the sales from the manufacturing end of the business. The Canadian General Lumber Company, Limited, has therefore been organized. Its personnel is well known, and in addition to certain of the principals of Graves, Bigwood & Company, includes the prominent members of that company's sales force. The directors are: A. C. Manbert, president; W. E. Bigwood, vice-president; H. I. George, treasurer; J. L. Macfarlane, secretary; F. H. Bigwood, general sales; F. V. Wilson, Ontario sales; C. Villiers, eastern sales.

DRUGGIST

Inspection

that really inspects.

Every Famous Five File that leaves our works is mechanically perfect.

The steel itself is carefully inspected when it comes to us from the mills. Every file is inspected after each process. Special care is given to the shape of the teeth. After hardening, every file is tested on a piece of hardened steel; and if a file shows the slightest defect, at any stage, it is rejected.

That is why every file is mechanically perfect when it leaves our works.

And that's why it pays you to specify them when ordering.

Prescott's Valve Controller

Patented June 8, 1915.

The Machine You Have Been Waiting for.

To eliminate every trouble with your Steam Feed Valves install one of these machines.

Six Real Reasons for Doing So :

- 1—Gives the sawyer the easiest kind of control of valve.
- 2—Hand lever stays put, making them safe against any jerk or kick of valve.
- 3—Gives the sawyer every confidence in handling valve.
- 4—Will prevent accidents—is easier on the nerves and carriage runs steadier.
- 5—Water flowing into valves from foaming boilers does not fret the sawyer.
- 6—This relief from all troubles of which sawyers have complained enables them to give closer attention to the logs they are cutting and a better inspection of the lumber they produce.

Read what one of the largest lumber companies on the north shore has to say about it.

We are sole Canadian manufacturers of these machines.

Pamphlets with full description and prices on application.

Let us quote you also on our new "Hamilton" Vertical Steam Feed Valves.

WHAT IS IT ?

PRESCOTT'S VALVE CONTROLLER

Waubashene, Ont., Sept. 11, 1917.
Messrs. Wm. Hamilton Co.,
Peterborough, Ont.

Gentlemen:—

Replying to your inquiry re Prescott Valve Controller, which you sent us last spring to try out: I beg to say that we installed this machine early in April, just previous to starting the mills, selecting the most difficult valve we have to handle, the steam having to travel through nearly three hundred lineal feet of pipe to reach this valve, and noting the fact that the pipes are well covered, there is necessarily considerable condensation, and every sawyer knows the annoyance caused by water passing through the valves which violently jars or jerks the lever, sometimes wrenching it from the hand and thereby inflicting serious damage to the machinery of the mill. And now after nearly five months of daily use, I am pleased to tell you that this device has put up all that is claimed for it. There is not the slightest jar or vibration to be felt, no matter where the lever is held. It is very easily attached and does not interfere in any way with the free movement of the lever, and the Sawyer, Mr. George Botting, also our Foreman, Mr. W. A. Gill, both speak of your controller in the most glowing terms. I can, therefore, congratulate you on securing an article that will fill many a long felt want.

Yours truly,

(Signed) D. B. Anderson,
Chief Engineer,

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, \$2.00 per year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

The Car Stake Problem—Who Should Pay for the Cost?

Hardly a day goes by in a lumber office without bringing with it some form of difficulty between one firm and another about a business deal which has not been made the subject of a mutual agreement and which is frequently the cause of misunderstanding and unpleasantness. These difficulties require diplomatic handling under present conditions because of the lack of uniformity in the methods practised by different firms. In connection with these matters it would be well if the various organizations and associations formed for the promotion of the welfare of the lumber trade and industry would endeavor to settle as many of them as possible and get them out of the way.

A striking instance of this sort of thing is the car staking trouble which crops up from time to time between lumber firms. By a recent mail the Canada Lumberman received a vigorous reference to this question, together with copies of a large quantity of correspondence which had been exchanged between two firms before an understanding was reached. Moreover, in the understanding reached, the correspondence indicates that the feeling of unpleasantness was not removed, although a settlement was made and an agreement entered into regarding future staking arrangements. The difficulty in this matter arises out of the divergence of interests between parties and the difficulty in knowing in advance whether a car is likely to be one needing stakes or not. It ought to be a simple enough matter, however, to reach an agreement which would regulate all arrangements regarding stakes where questions come up between firms which belong to one of the recognized trade associations. At the annual meeting of the Canadian Lumbermen's Association, about to be held, it would be a good thing if its members could adopt a definite understanding on this subject which could be held up as a standard for the transactions of all firms. The absence of any recognized standard makes it possible for any firm to-day to take an arbitrary stand and cause trouble. The Canada Lumberman has no solution of the question to offer. It is a matter which must be threshed out and probably

made a subject of compromise, but it ought to be settled once and for all.

Apparently there is no hope of ever making it compulsory upon the railway companies to furnish stakes. The manufacturer, therefore, is the first party to come face to face with the problem, and he naturally wants to make the wholesaler pay for the stakes, as they are passed on to him and never returned to the manufacturer. In a great many cases the retailer refuses to pay for the stakes, and so the wholesaler is stuck unless he wishes to be as firm as the retailer and run the risk of a lot of trouble with the manufacturer.

This is the situation in a nutshell, and so long as there is not a definite understanding upon the subject, trouble will be continually developing. If the Canadian Lumbermen's Association were to go on record as favoring a definite method of settling this question whenever it comes up, and if the Wholesale Lumber Dealers' Association, which has been recently formed, were to adopt a similar course, it would probably not be long before every one in the trade understood that the cost of car stakes was to be borne in a definite manner, and the correspondence files of lumber firms would no longer be burdened with a lot of useless letters.

Forest Products Laboratories Entitled to More Support

The interest taken by Canadian lumber manufacturers in the work of the Forest Products Laboratories at Montreal, an institution conducted by the Dominion Government with the co-operation of McGill University, has not been sufficient in the past to encourage much in the way of scientific research into matters relating to the utility, structure, etc., of Canadian woods, from a lumberman's point of view. To a great extent the researches carried on by the laboratories have been devoted to work which is of particular interest to the pulp and paper industries, and these industries have shown their appreciation and co-operation in a definite manner. The laboratories have been able, with the limited means and equipment at their disposal, to work out a number of important industrial problems which have resulted in reduction of costs and utilization of material which formerly went to waste. Similar results could probably be obtained in connection with the use of our forest products by the lumbering industry. In fact, to a small extent the laboratories have given their attention to such matters and have obtained valuable results. The lumber industry has been subjected to a great deal of criticism by the public on account of raw material which has to be wasted in the processes of manufacture. Undoubtedly important savings could be effected along these lines if the service of the Forest Products Laboratories were devoted to the problems in a thorough manner.

There are two definite reasons for this situation. In the first place, the lumber industry has not shown the same amount of interest as the pulp and paper industry; and, in the second place, the government, for one reason and another, has not been as generous with the laboratories as its possibilities require. The war has been to a large extent the cause of the government's failure to support the laboratories sufficiently to enable them to extend their field of enquiry, and, possibly for this reason, we will have to wait for better times before expecting much in the way of increased facilities; but, from discussions of the subject which we have heard from time to time, we believe that the government would be justified in giving this matter very serious attention to-day. There is always a limit to economy in connection with an undertaking of this nature, below which it is wasteful to fall, and apparently this limit has been encroached upon during the past two years, as the laboratories, instead of expanding in their facilities, their work, and their staff, have been obliged to continue with inadequate equipment and to restrain their field of work, at the same time looking on passively while their skilled men are being absorbed by industrial and commercial companies which realize that money expended upon services of this nature is really a source of gain rather than of increased operating costs.

The record of the laboratories during the past year is a creditable one, and it has produced definite results of value to Canadian manu-

facturers, although it has been handicapped in many directions. Such a record entitles it to generous treatment, and we hope that the government will see its way clear along these lines during the present year. If reasonably well equipped and staffed, the laboratories could demonstrate to the lumber industry almost as fully as they have to the pulp and paper industry that they can solve a number of the difficult and long-standing problems of lumber manufacturers. Moreover, our forest resources are of great value, and are in danger of permanent exhaustion. So it is not only a matter of expediency that scientific investigation into problems relating to conversion, utilization and reduction of waste should be carried on under government assistance, but is a matter of imperative necessity that the work should be done thoroughly and with as little delay as possible. The matter, moreover, is not solely one of industrial concern, but unquestionably has an intimate bearing upon our success in the war. The researches conducted by well equipped and manned forest products laboratories could not fail to bring forth information of importance in connection with the production of numerous kinds of war material. The government should make a close enquiry into this matter, and endeavor to make the Forest Products Laboratories nearly equal to their great opportunities.

Sawmill and Logging "Waste"

Lumbermen are often surprised at some of the strange statements which find their way into print in the daily press about the great amount of so-called "waste" for which they are said to be responsible in their manufacturing operations. Probably no other manufacturer has been so continuously blamed for alleged waste, and yet the justice of the charge is not so certain as the average man imagines. Leaving aside the important matter of a scientific definition of "waste," it is sufficient for the purpose of this reference to the matter to point out that much of the criticism of the lumber manufacturer of to-day is based upon conditions which no longer prevail, but had their existence a generation or more ago. There is much to be done yet in the direction of reducing this waste, but much has recently been accomplished, as a result of the keen necessities of modern competition, and the sweeping charges of wastefulness can not be substantiated to-day.

Nevertheless, these charges continue their round in the press and even in semi-scientific publications. "Popular Science Monthly" is one of the latest to use this idea as a good one for an article, and nearly everything the article says is inaccurate. The "Journal of Forestry" exposes the article in its latest issue as follows: Speaking of pulp manufacture the author says: "Dozens of chemists have endeavored to save money by devising ways of utilizing the liquors of what is known as the 'sulphite process.' . . . As yet a commercially practicable method has not been worked out." For some years chloroform, muriatic acid, lard substitutes, and road dressings have been a by-product of at least some pulp mills. That it is both feasible and profitable to utilize the waste liquor was long ago demonstrated and the methods applied.

In discussing lumber manufacture, it is stated that "only 15 per cent. of the standing tree appears as finished lumber after the axe and saw have done their work; more than 65 per cent. is left on the ground. The money lost in the form of mill waste is far greater than the profit made from salable lumber."

Under no conditions that exist at the present time is it probable that such wasteful utilization exists, since to leave 65 per cent. of the cubic volume of a tree in the forest would necessitate leaving a large part of the bole in the forest—a practice nowhere existing at the present time.

As an illustration of ordinary utilization practice, there may be cited the case of a 26-inch d. b. h. southern yellow-pine tree recently measured by the writer and which showed the following cubic contents: Stump, 3.996 cu. feet; bole, 113.828 cu. feet; limbs, 14.357 cu. feet. Total, 132.181 cu. feet. Of this amount, 98,537 cubic feet, or 74.5 per cent. of total cubic contents, was taken to the sawmill, instead of the 35 per cent. mentioned by the author of the article.

The bole when sawed into lumber would yield the following pro-

ducts: Lumber (rough), 59.33 cu. feet; sawdust, 17.993 cu. feet; slabs, 20.930 cu. feet. The final yield of lumber, therefore, was 45 per cent. of the volume instead of 15 per cent., as stated in the article. From a 14-inch tree, measured at the same time, there was taken to the mill 67 per cent. of the total volume, the lumber yield being 46.5 per cent. of the total cubic volume of the tree.

While the measurements of two trees are not a sufficient basis for concluding that the above percentages may be assumed as an average, yet the fact that the measured trees represented the general run of the timber being logged, and the final results were so nearly equal, shows that the yield in lumber far exceeds 15 per cent. of the total cubic contents of a tree.

In discussing sawdust as a waste product, the reader is led to believe that it is a source of heavy expense to the mill operator, since "there are not enough dolls to stuff into lifelike rotundity with it, nor enough bar-room floors to sprinkle with it. . . . Others try to burn it, but without much success."

As a matter of fact, for years sawdust has been burned in sawmill power-houses with great success, and has furnished and still furnishes the chief fuel which provides power for driving sawmill plants. Far from being a liability to the sawmill operator, it has a distinct money value to him, because it permits his power-house boilers to be stoked mechanically, and did he not have sawdust some other fuel would have to be provided at an increased cost. At many sawmill plants not only is all the sawdust used as fuel, but, in addition, planing-mill refuse; and often it is necessary to grind slabs and edgings into fine fuel in order to provide material for keeping the fires going at night and during Sundays and holidays.

Sawdust is not a waste, since fuel is an essential, and sawdust is the cheapest fuel available to the manufacturer. If the sawdust-disposal problem was the only one now confronting the lumberman, he would long ago have ceased to worry.

The time has come when such rubbish should no longer be printed by "popular" magazines, scientific or otherwise. If a real source of waste is being looked for, the person who spoils good printing paper in this way can find it much nearer home than he thinks.

Important Possibilities in Northern Quebec

In the course of a letter on the Transcontinental Railway, Mr. J. G. Scott, president of the Quebec Board of Trade, directs attention to the possibilities of the lumber industry in the territory served by the line. The presence of spruce, combined with many water powers, he says, is bound to result in many pulp and paper industries. The French-Canadian settlers are cutting enormous quantities of pulpwood; they have erected 14 sawmills, and for the lumber and pulpwood are asking 1,500 cars during each of the next eight months. He adds: "The value of our northern country, of our spruce forests and water powers, is not properly appreciated. About twenty years ago, a number of Quebec merchants built two railways into the north country—the Quebec and Lake St. John, and the Great Northern. Their efforts were treated with incredulity. But today the Saguenay and St. Maurice valleys, whose forests and water powers owe their development to these two roads, have industries which represent about eighty millions of capital and afford employment to 20,000 men, in five brand new manufacturing towns and in the woods, and attract annually to the country thousands of tourists and sportsmen."

A deputation from Ottawa, consisting of a controller and the city solicitor recently called on the Hon. G. Howard Ferguson, Provincial Minister of Lands and Mines, to ask the privilege of cutting wood for fuel in Algonquin Park. The permit was granted and the city of Ottawa proposes to have at least 10,000 cords of hard maple, birch and tamarac cut in Algonquin woods next summer and delivered for consumption during the autumn months. In order to conserve fuel the city will have an order passed prohibiting the use of coal before December 1st, and up to that time wood from Algonquin Park will be burned.

Freight Rate Increases Postponed

Sir Robert Borden Announces Adjournment of Hearing
Until March—Further Argument to be Received

The increased freight and passenger railway rates provided for by a judgment of the Board of Railway Commissioners for Canada under date of December 26th, 1917, are not to become effective until some time in March at the earliest. The increases were to have become effective on February 21st, and the postponement is the result of protests made to the Canadian Cabinet Council by Western Provincial Governments and public bodies with whom were associated the organized farmers and some of the most prominent business interests of Ontario.

Announcement of the postponement of the effective date for the new rates was made by Sir Robert Borden on January 24th, when the hearing upon the subject was resumed. Mr. H. J. Symington, on behalf of the Western Governments and other interests, was continuing his address when Sir Robert Borden stated that the Government was desirous of obtaining a perfectly clear presentation of the facts and he suggested that at the conclusion of Mr. Symington's address the hearing should stand adjourned until March 1st. If this was satisfactory, those opposed to the order of the Railway Board, and those supporting it, could place their cases in the hands of the government in printed form. He further suggested that those opposed should have their case in the hands of the government by February 8th. The railways could take until February 18th to reply and the rejoinder on behalf of the protesting governments and other bodies could be prepared not later than February 28th. The hearing of verbal arguments would be deferred until March 1 and the bringing into force of the new rates would be postponed until some time after the date fixed for the resumed hearing. No objection was raised to this proposal, and it therefore became effective.

The increased rates, as they apply to lumber, were published in detail in the Canada Lumberman of January 1st. On account of the shortness of time between the judgment and the date of publication, however, it was necessary to omit some interesting references to the subject which the judgment contained. In the course of his remarks, the Chief Commissioner said:—

"The consideration of chief importance underlying the lumber rates in the West is their relation one to the other. The spread is of greater importance to the lumber industry than the amount of the rate itself. A straight percentage increase would improperly accentuate existing spreads from lumber producing territories and dislocate business. It would have a specially detrimental effect upon the British Columbia industry.

"On the other hand, a general flat increase might bear with undue severity upon short hauls. There are rates as low as 5 cents a hundred. A flat increase of 3 cents, which on a rate of 46 cents would be an increase of only $6\frac{1}{2}$ per cent., would, in the case of a 5-cent rate, amount to an increase of 60 per cent.

"The whole western lumber rate situation is full of difficulty and presents a highly technical rate problem. The question as to how increases in lumber rates can be best made without dislocation of traffic by changing the rate relationship now existing between present mills and at the same time result in no undue hardship to the consumer, was referred to Mr. Hardwell (the Board's traffic expert), for his opinion. Mr. Hardwell's report, in part, is as follows:—

"As regards lumber; so far as the British Columbia mills are concerned, the desideratum being the preservation of the existing rate relationship between the various mills, as emphasized at the Calgary hearing and in past proceedings, it is clear that this cannot be attained by means of a percentage of increase, even though held down to a maximum per 100 pounds advance for the longer hauls.

"The entire situation has been very carefully examined, therefore, with the view of settling on flat increases in cents per 100 pounds which should avoid any possible complaints of preference or discrimination. Working on a tariff that has no uniform basis, it is impossible to arrive at advances accurately representing 15 per cent. I find, however, that the adoption of the following recommendations would not only afford a broad basis, but would nearly approximate 15 per cent."

Then follow the details of increases as published in the Canada Lumberman of January 1st.

Continuing, the judgment of the Chief Commissioner says:

"The adoption of Mr. Hardwell's recommendations will put the lumber rate upon a more scientific basis than it has been in the past.

"The rate situation which Mr. Hardwell's report preserves is the outcome of an agreement between the associated western mills and the railways. Under this arrangement, the rates from the coast mills east to Winnipeg and Port Arthur, are made the basic rates. The rates from the interior mountain mills and from the mills as far east as Calgary and Blairmore are all based on this standard

rate and scale, not strictly having regard to mileage, but scaled according to the agreement between the trade and the railways.

"These mills enter into more or less competition with mills in the Northern Spruce Belt (Northern Manitoba and Northern Saskatchewan), also with mills in the Lake of the Woods district on the Canadian Pacific, and in the Rainy River district on the Canadian Northern; and to some extent with the mills at Port Arthur.

"The situation is highly competitive having regard to the lumber business. Mr. Hardwell's report is, in my opinion, the best solution available.

"On through movements of these lumber commodities from western shipping points to destinations east of Port Arthur, under Mr. Hardwell's report, the increase permitted is a proper and logical result having regard to the dispositions made of other through movements, and in view of the increases already made in the all-rail and lake-and-rail rates."

Another interesting quotation from the judgment of the Chief Commissioner is as follows:—

"Railway tolls covering services incidental to transportation stand on a different footing to those charged for the line movement. The application for a general advance and authority permitting a general advance in freight rates not exceeding 15 per cent. would, however, include them unless specifically excepted. Some of these charges, for example, tariffs for heating and refrigeration, have been recently considered by the Board. Other such services in their nature represent entirely a terminal activity and have particular importance at different local points. Strong objection has been taken by Boards of Trade, particularly those at larger points, to any increase being made on this application and on the general grounds on which it is supported to any increase in these tolls.

"In my opinion the objections are well taken, and I would refuse on the present record any increase of tolls and tariffs, applicable to switching, whether local or inter-switching, weighing, demurrage, refrigeration, heated car service, car diversions, reconsignments, storage, wharfage, sleeping or parlor car accommodation, or other special services."

There is a disposition on the part of the public and the press to feel that this postponement means that the government desires to delay the making of any changes in freight rates, pending the possibility of an extension of government control or ownership of Canadian railways.

C. L. A. Meeting to Occupy Two Days

Owing to the large amount of business to be transacted at the annual meeting of the Canadian Lumbermen's Association, to be held in Montreal, it has been found imperative to make changes in the original programme by extending the sessions. It was at first contemplated to hold the meeting on February 5, with a banquet in the evening; this has now been altered to February 5 and 6, with the banquet on the evening of the first day, at the Windsor Hotel.

The committee, of which Mr. W. T. Mason is chairman, are expecting an unusually large attendance of out-of-town members, and have made very adequate arrangements for their reception.

President W. E. Bigwood, and Mr. F. Hawkins, the secretary, were recently in Montreal, and thoroughly discussed with the committee the various details. The question of the business to be dealt with was gone into, and as a result the change in the programme referred to above, extending the sessions, was agreed on.

Special arrangements have been made for lady visitors. Rooms have been engaged at the Windsor Hotel for their use, with the object of providing means for social intercourse while the members are absent attending the annual meeting.

The address of welcome to visiting members and friends at the banquet will be made by Mr. William Rutherford, Montreal. Mr. W. McNeill, of Vancouver, will be among the speakers at the banquet, and it is also expected that Mr. J. M. Woods, of the National Hardwood Lumber Association, Boston, will address the members during the two days' session.

Railway Cars Built in 1917

In the annual issue of the Railway Age, of Chicago and New York, complete figures are given of the orders for railway equipment built in the United States during 1917.

The total orders for freight cars during the year aggregated 164,058, but this includes orders for 30,500 cars for Russia, which are held in abeyance. The total freight car orders were as follows:

From car builders, 58,443; from company shops, 20,924; government orders for service overseas, 18,844; government orders for use in this country, 180; for France, 21,700; for Russia, 42,500; for other foreign governments, 1,467;—Total, 164,058.

Passenger cars ordered during the year totalled 1,167, the smallest since the records were started in 1901.

Toronto Lumbermen Hold Annual Dinner

Board of Trade Restaurant Crowded at Second Banquet of the Trade—
Striking Addresses on Practical Business Features

J. B. Reid—Toastmaster

The second annual dinner of the Lumbermen's Section of the Toronto Board of Trade was held in the Board of Trade restaurant on Friday, January 25th, and like its predecessor was an exceptionally successful event. Practically every lumberman in Toronto attended, and there were also a large number from outside points. The Board of Trade restaurant was filled completely, there being about 160 lumbermen in attendance.

Mr. J. B. Reid, chairman of the Section, acted as toast master, and there were also seated at the head table, Messrs. Andrew J. Brady, Jr., North Tonawanda, N.Y., the chief speaker of the evening; John G. Kent, former president of the Toronto Board of Trade; W. K. Grafftey, Montreal; W. E. Bigwood, Toronto, president of the

Canadian Lumbermen's Association; Thos. Patterson, Hamilton; H. J. Terry, Toronto; J. L. Campbell, Toronto, and A. E. Eckardt, Toronto.

At the conclusion of the dinner, Mr. Reid opened the speaking with a short address. The bringing together of so large a number of lumbermen, he said, was a matter of great significance to all of those who had been working for the past two or three years in order to effect the organization of the trade and to get the kinks out of the lumbermen which had been developing in them for the last thirty years. His ambition during the past two years had been to get as near to that point as possible. The lumbermen had accomplished a great deal already in the way of organization, but they had only started. Two years later he hoped that he would see all the lumbering interests of Canada co-operating and standing shoulder to shoulder to meet the competition and difficulties that were likely to arise after the war was over. During the last two years every man had felt the benefit of co-operation in the trade in Toronto. They had made more money and done more satisfactory business. The Lumbermen's Section of the Toronto Board of Trade which was established a couple of years ago was to-day, as the president of the Board would tell them, the liveliest section in the Board. In spite of their success, however, they really had only commenced the work of co-operation. They had been operating a Retail Credit Bureau for something over two years which had been the means of keeping the retailers out of the poor house. Then out of the Section there had also grown an organization of wholesalers. The wholesalers were the big men in the lumber business, the men with the money. They had seen the benefit of the retailers' credit bureau and had decided to form one for themselves in order to protect themselves against retailers. These were two organizations which might have been said to have grown out of the Section of the Board of Trade. Each was managing its own affairs and if ever there developed anything in the nature of a fight between them it would be like a family quarrel and they would bring it to the Board of Trade, who would settle it for them. The organization movement in the trade, moreover, had not stopped with these successes. Starting as it had in Toronto it was now spreading through the province, and already the retailers of the province had organized themselves into the Ontario Retail Lumber Dealers' Association, whose prospects for successful operation were exceptionally bright.

The programme of the after-dinner speaking consisted chiefly of three addresses under the general heading of "Trade Problems." In connection with these Mr. Reid called upon Mr. H. J. Terry, of Toronto, to speak for the wholesaler; Mr. Thos. Patterson, of Hamilton, for the retailer, and Mr. Andrew J. Brady, Jr., of North Tonawanda, for the salesman.

The Wholesaler

Mr. H. J. Terry, speaking for the wholesaler, recalled that before the war, housebuilding activity had been in evidence in all parts of the country. At that time conditions were such in the north that the wholesaler was able to purchase stocks and to supply the retailer with just what he wanted at a legitimate profit to himself. After the commencement of the war all this had changed. For a time every-

thing was upset. Then conditions began to adjust themselves and the wholesalers and other lumbermen in time adjusted themselves to the new situation. From that time until now lumber had gradually gone up in price until it had reached its present dizzy heights. One might say today that the manufacturer practically controlled the situation insofar as one individual could control his own affairs. The manufacturer perhaps was forced to ask what the wholesalers thought were abnormally high prices for his product. Unquestionably the wholesalers did feel that these prices were abnormal. This was one of their great present-day business difficulties. They also had transportation problems to face at the present time. These conditions and other problems had made it necessary to form what was now known as the Wholesale Lumber Dealers' Association, Inc., by means of which the wholesale trade expected to be able to thresh out the various problems of the wholesaler and to reach satisfactory solutions of them. Mr. Terry thought it was a good time right now to solicit those who had not already affiliated themselves with this association to do so. The association needed their help in order to make its work a pronounced success, and the association unquestionably could be of great benefit to all of the wholesale trade.

The Retailer

Mr. Thos. Patterson, speaking for the retailer, and as president of the Ontario Retail Lumber Dealers' Association, said that the retailers had had a pretty serious lot of problems before them during the past year. The matter of wages had been a very troublesome point. Then again, the question of getting material to meet the demand was keeping them at their wits ends. They had been up against the same general situation as the wholesaler. The railway companies had been unable to take care of their business. The demand for material had been different from the ordinary demand. Ordinary stocks had not been in demand at all. The buildings that had been gone on with and the class of material called for had been different from the regular lines and this has caused additional trouble in finding stock to fill the orders. The high price of steel had been of some help to the lumber trade as slow burning construction had come back and taken its place in the building trade once more. A few retailers had had a little experience with the munition box business in the early stages of the war. The contracts were let then for a fairly reasonable figure and those who obtained them had made a little profit. When the change in the chairmanship of the Munitions Board came about, however, the conditions of the contracts were also changed and the lowest bidder got the business thenceforth. In a great many instances he would have been much better off without it.

The retailers had had a fairly good year's business, but as a matter of fact the factories engaged in munition and other war work had all met with a new set of conditions which made their profits much less dependable and the cost of building had become so prohibitive that he was afraid the house builder would think twice before he went on with anything of consequence in 1918. Therefore, he believed that for the next year or two they would have to expect pretty slow trade.

Conditions lately had become such that the movement to organize the retail dealers in Ontario had made much headway and now an organization had been completed under the name of the Ontario Retail Lumber Dealers' Association. As retailers, they knew that the competition which they had to dread most was that of the man who did not know his business. They did not fear the competition of the man who knew what his goods and his business were costing him. The Association proposed to make an effort to educate the different members of the trade in a system of cost-keeping so that they would know just where they were at from year to year. Other matters that were going to be taken up by the Association were such as the standardization of grading. He believed that all present would admit that the rules governing the grading of lumber were on a very loose basis in Canada today. Years ago a set of rules had been adopted by the old Board of Trade of Toronto. This had been in June, 1890. Since that time these rules had apparently fallen into disuse, and the grading today was done by every manufacturer according to his own ideas.

Another matter that they proposed to give considerable attention to was the standardization of mill-work. At present if a retailer bought a carload of matched lumber from one mill he would find that this mill's idea of matching was probably different from that of another mill. If he had a little of the matched lumber left over and bought another carload from another mill, the chances were that he would not have two boards that would go together. Then again,

there was the question of the dressed board. Some mills seemed to think that 13/16 of an inch was thick enough, while others thought that 7/8 of an inch was the proper thickness. There should be a standard size for the dressed board. A retailer could not depend upon the size of a dressed board unless he specified it in his order. Mr. Patterson understood that in the United States today there were rules governing the dressing of timber in the different important sections. When a man ordered from a section he knew exactly what he was going to get. Another thing the retailers hoped to handle through their new association was the matter of credits. This was a most important subject in the retail business.

The Salesman

Mr. Reid next called upon Mr. Andrew J. Brady, Jr., North Tona-wanda, N.Y., to speak for the salesman. In introducing him, Mr. Reid said that if Mr. Brady were anything like some of the salesmen who struck the retail offices in Toronto he was afraid to spring him on them, but he noticed that Mr. Brady was an Irishman and an Irish salesman must be a dandy.

Mr. Brady expressed his pleasure and pride at being in attendance at the annual dinner of the Toronto lumbermen. He hoped that during 1918 they would have a successful and prosperous year. He realized, however, that their success as business men must be tempered with sacrifice, but it was sweet to know that they were all struggling in a noble cause, all banded together in the cause of democracy and were ready to sacrifice everything, if necessary, on the cross of humanity.

If we were to trace the history of business building in our countries, Mr. Brady said, from the day when the hardy pioneer blazed the trail, through the days when the struggling manufacturer and producer laid the foundations of their infant industries down through the days when work came to be distributed and the methods of scientific industrial development were worked out, down to the present day, when commercialism had become an art, business building a science and business men, from the producers down, scientists, one would be greatly impressed with the fact that the progress of business building in the United States and Canada had been the wonder of the ages. Many factors had been at work to weave this fabric of business progress. The manufacturer, the wholesaler and the retailer had all done their share. There was another factor, of perhaps not so great importance as those mentioned, but still a vital factor in the building of business as it was today, that expert in the marketing of goods—the salesman. The salesman was worthy of his place in the scheme of the business world. He was keeping pace with all the others. He was the scientist of sales. The salesman was the founder and the holder of trade. If we were to analyze that statement we would find that it about covered the signal points in a salesman's work.

One might speak for hours on the trials and tribulations of the salesman in his role as trade commissioner, but Mr. Brady preferred to speak briefly of the salesman who had "arrived," referring to him chiefly in regard to his relations with his trade and with his house. Of course, now and then, a salesman would have no "relations" whatever with some kinds of trade. Occasionally he would run across a class of buyer who in his own estimation considered the salesman as something which the vagaries of the winds had swept across his pathway and whom it was best to check instantly before he might chill the peculiar quality of his own importance. Thank God that only happened once in an age, and really only once in the same place. The ordinary relations of the salesman with his trade were those of man to man, expressed in the spirit of "Glad to see you again."

The spirit that moved in the transactions of the lumber salesman was "confidence." He might pile argument upon argument, but after it was all boiled down it would simply amount to this, that confidence, generated from truth, frankness and interest opened up the pathways of business friendship and regard and all conspired to the common end, co-operation in the matter of selling, co-operation in investigating claims, and co-operation in every other trade activity.

In the rural districts, the salesman who had built up a reciprocal feeling of confidence between himself and his trade had possibly a greater latitude for displaying all the intimacies of trade relations. In a hundred and one ways the salesman was invaluable to the small town dealer and this alliance was one which worked to the benefit of both parties. To his mind this confidence was the pivot around which turned all the salesman's success with his trade and this building up of confidence was no accident of fortune on the part of the salesman, but the result of a concentrated activity which brought out all the best there was in him of ability to conform to circumstances of courtesy, of courage, of determination, of optimism, of tenacity of purpose, of vigor and of zeal, all compounded and heated together in the crucible of work, the residue of which in its last analysis was efficiency.

Ability to conform to circumstances meant that the salesman would never make use of the popular cry "business as usual." Rather with such a salesman, the maxim today would be "business as un-

usual." On every side there were new and divergent paths that were bearing the brunt of travel of the energetic and resourceful salesman. The keen salesman was not travelling the line of least resistance, but picking out the strange pathway and the unknown channel. Success today meant reaching out and grasping the hand of each new opportunity. Of course, one occasionally came across the old "stand pat" salesman and the one who was always coming and going, but never arrived. The old stand pater lived on the record of his past performance. The "never arrive" had no record of past performance. In the former, opportunity was dead. In the latter it never existed. In both of them the sense of duty was infinitesimally small. They could never bring these men to believe that the salesman of today might possibly live up to the achievements of tomorrow, that work well done merited its own reward. The rank and file of the salesmen of today were keenly alive to present conditions. They knew that when the lines of travel were blocked there was only one thing to do and that was to detour and detour in the right direction.

In order that efficiency should be perfected to its highest state, the salesman's relation to his trade must swing around his other relations, his relations with his house. Success would crown the salesman's efforts only if there was co-existent between him and his house, a spirit of harmony which would operate not only in favor of the one but also of the other. The house must stand back of its salesman at all times. In short, all their relations must bear the mark of co-operation. On the salesman's part there must ever be concentrated in his mind the one idea to animate every deed and action. In all his channels of work, in the act of selling, as arbitrator of claims, as investigator of trade conditions, he must ever keep concentrated in his mind the one idea to which every other idea must be subordinated, that whatever he did must always conduce to the good of his house. This should be the salesman's one infallible guide. There were times when this doctrine was not adhered to as strictly as it should be. There were certain gentlemen travelling the road in the role of salesmen, who had but one idea in mind, and that was their own personal good and not the good of their house, men who were animated by one philosophy, of living at the other fellow's expense. In these days the thread of existence of such a salesman soon unravelled itself, because he had failed to live up to his vocation.

There should occasionally be, on the part of the house, a little of the spirit of accommodation, of congratulation. Salesmen were all human, after the old saying, grown up children, susceptible at all times and agreeable to a little patting on the back. If a salesman did something particularly worthy of mention, sent in an especially good order, the house should allow the humanizing influence of appreciation to get in its good work. Confidence and co-operation on all sides were the main avenues of the salesman's success and it was impossible for him to find them along the lines of intemperance and laziness.

Mr. J. G. Kent, ex-president of the Board of Trade, replied to the toast "to our guests." He suggested that it would be a good thing if the lumbermen of Toronto would get together and arrange for holding a convention during the first week of the Canadian National Exhibition. They could get together in Toronto and have a meeting and a good time as well. He could assure them that the Canadian National Exhibition would give them a splendid welcome and a good time. Mr. Kent was also pleased to have the opportunity to welcome the lumbermen as a branch of the Board of Trade and he assured them that it would always have the backing of the Board.

Mr. W. E. Bigwood, president of the Canadian Lumbermen's Association, was called upon and said that to his mind an organization like that of the Lumbermen's Section of the Toronto Board of Trade was an indication of the good results that came from seeking to develop the interests of all who were engaged in the lumber industry and trade. It embraced lumbermen from the Atlantic to the Pacific. The success of the Lumbermen's Section of the Toronto Board of Trade was an example of what could be done in the way of co-operation locally, and he hoped that it would lead to the creation of similar organizations elsewhere, all of which could unite in promoting the advancement of a splendid National Association. Mr. Bigwood then referred to the fact that the Canadian Lumbermen's Association would hold its annual meeting at Montreal in the Windsor Hotel on February 5th and 6th and urged as many as could do so to make a point of attending.

The toast to the "press" was replied to briefly by Mr. H. Boulton. During the evening a number of excellent musical selections were given which helped to make the programme attractive.

The Western Retail Lumbermen's Association, at its convention in Winnipeg, denounced the proposed increase in railway freight rates. As an alternative the suggestion was made that where the government lines, including the C. N. R. are duplicated, all such lines be torn up and the rails used to repair other systems. Another suggestion made was that the government should levy a special tax on freight bills during the war.

Wholesale Lumber Dealers Association

Organization Completed and an Office Opened at Toronto—Summary of the Association's Plan of Operation

A. E. Clark, chairman.

A short report of the organization of the Wholesale Lumber Dealers' Association, Inc., was published in the Canada Lumberman of January 15, with a statement that more complete information would be available for the February 1 issue. The provisional committee of the association has obtained a charter from the Dominion Government, incorporating the association, without share capital. Under this charter it is permitted to carry on the customary work pertaining to an association based upon the principle of co-operating, in order to handle matters of mutual interest, such as legislation, transportation, etc., and to exchange information relating to the financial standing of customers. Under this charter the main activity of the association at the commencement

will be the conducting of a "bureau of information," to furnish members with all available information regarding the financial standing of their customers and their reputation for making satisfactory payment.

At the last meeting of the association the provisional directors outlined the progress that had already been made, and laid before the members present a plan for the working of the "bureau of information." This plan was discussed in detail at the meeting. A number of alterations were made in it, and it was finally adopted. The plan provides a means whereby members will be able, through the bureau, to secure all vital information regarding credits at practically a moment's notice. The experience of other associations working upon a similar plan, particularly that of the Lumbermen's Credit Bureau, Inc., which handles credit reports for the retail trade of Toronto, shows that such a service is of inestimable value to the trade. It not only enables dealers to avoid losses, but it develops among them a measure of confidence in one another which enables them to conduct their business affairs upon a far more efficient basis. Sometimes, at the commencement of work of this nature, there are a few who stand aside and a few who co-operate, although they entertain a certain amount of doubt about the practical working out of the idea. Experience shows that these parties are quickly convinced, and become as thoroughly satisfied with the value of the work as those who were its energetic organizers. The wholesalers' association starts its career with a list of 23 members, and a considerable number of others have

expressed their interest to such an extent that they are expected to become members very soon.

One of the matters which caused considerable discussion among the members at the last meeting was whether membership should involve an obligation to abide by the regulations of the "Bureau of Information," which included furnishing much of the information upon which the bureau bases its reports. A proposal was made that a limited membership should be permitted which should not include this obligation, the idea being that members who take advantage of the limited membership at a somewhat reduced fee would, before long, learn so much about the advantages of full membership that they would decide to pay the additional fee and become full members. The result of the discussion was a decision that it would be best not to provide for a limited membership, but to have one class of membership only, and to include the obligation to co-operate in connection with the "Bureau of Information." Thus the association commences its work on a clear and simple basis, which will assure to its members the fullest possible measure of valuable service from the outset.

An office has been opened by the association at Room 405, Crown Office Building, 26 Queen Street East, Toronto, and arrangements have practically been completed which will make it possible to commence the preparation of reports upon credits on February 1.

An important feature in connection with the new association is the fact that it will be kept continually in touch with the interests of the wholesale lumber trade by regular monthly meetings, which will be held in the evening following an informal dinner. Meetings of this nature furnish the means of getting together in order to discuss results already secured and to devise new methods of making the work effective. Moreover, there are many matters of importance which are continually developing in connection with such an important trade and which must be watched closely and dealt with promptly. These monthly meetings, supplemented by the watchfulness of an active board of directors and a secretary and office staff, who are at the service of the association, will furnish the means of checking up and working out solutions for every kind of problem that turns up.

The intention of the association, so far as its "Bureau of Information" is concerned, is to cover as fully as possible the field connected with the trade in Ontario and Quebec. Individuals or firms conducting a wholesale lumber business and selling to dealers in these provinces are eligible for membership. This makes it possible for firms elsewhere to become members. For instance, it is expected that a number of United States firms doing business in Ontario and Quebec, as well as firms in other parts of Canada, who sell to the trade in these provinces will become members. Already several of the large British Columbia firms which are interested in the Eastern trade have joined the association.

The accompanying portraits are those of the first chairman of the association, Mr. A. E. Clark, of Edward Clark & Sons, Ltd., Toronto,

A. E. Eckardt, Toronto.

A. C. Manbert, Toronto.

H. J. Terry, Toronto.

Three of the Directors of the Wholesale Lumber Dealers Association, Incorporated.

and three directors. It will be recognized by everyone in the trade that the officers of the association for the first year of its existence are as good a set of officers as could have been selected, and that their interest in it will make its success practically certain.

Log Sinkage Heavy Source of Loss

Ottawa Valley and Quebec Operators Testify to Quantities of Output Which Never Reach the Mills

During the progress of the Canadian Newsprint inquiry at Ottawa last month much information of interest to lumbermen was given by expert witnesses in regard to loss through sinkage on river drives. A record for two years produced by Mr. D. J. Salls, of the Howard Smith Company, for drives on the Chaudiere River route, showed 25,690 cords put into the water and 22,948 taken out, a loss of 2,742 cords. On the Etchemin River 11,777 cords were put in and 10,266 cords taken out, a loss of 910 cords, or 8.2 per cent. Mr. Salls said that sinkage was always a little higher than ten per cent. and sometimes reached 12 per cent. This applied to four-foot pulpwood spruce and balsam.

John R. Booth estimated his sinkage loss at fifteen per cent. He has allowed this percentage for sinkage for the last forty-five years. The drive averages 300 miles and takes from two to three years to reach the mill. Mr. H. I. Thomas, also of John R. Booth, testified that if small logs were driven the sinkage would amount to twenty-five per cent.

Mr. Charles Dougherty, secretary of the Rideau Lumber Company, Ottawa, showed statements indicating losses from 22.53 to 24.79 per cent. The lower figure applied to spruce logs only. The drive took two years and was about 150 miles. The figures were obtained by taking the difference between the number of logs put into the water and those which reached the mill.

Mr. S. A. Sabbaton, assistant manager of the Laurentide Company, produced a statement covering the years back to 1906. The average yearly loss was nine and two-tenths per cent.

Mr. Alexander MacLaurin, of the St. Maurice Pulp and Paper Company, gave evidence regarding lumbering on the North River, where sinkage covering a period of three years amounted to 18.9 per cent. Included in the figures given were 328 cords which were taken from the bottom of the river by a scow. Nine per cent. was written off for sinkage on spruce and from thirty to forty per cent. on balsam. The loss on sawlogs was given at nine per cent. and on four-foot pulp logs sixteen per cent.

An interesting sidelight on the scarcity of woods labor which is hindering lumbering operations this year was shown when counsel announced that one company had paid thirty thousand dollars to employment agencies alone to get men to go into the woods.

American Timber Sizes and Grades for Great Britain

In a recent report to the Bureau of Foreign and Domestic Commerce, United States Department of Agriculture, John R. Walker, of the Foreign Lumber Trade Commission, states that the adoption of American sizes and grades of timber for construction work after the war was recommended by the British National Housing and Town Planning Council at Leamington, England.

Mr. Walker writes as follows:—

"I have previously advised you that it was my intention to attend a conference of the National Housing and Town Planning Council at Leamington. I attended this conference and at their request addressed them in reference to the subject of my investigation and the desirability of providing in future building specifications for the use of our American grades and sizes of timber or lumber.

"I am now in receipt of copies of the report which was adopted at this conference, the important feature of which, from our standpoint, is that it directs attention to the importance of looking to the United States for timber supplies after the war and the recommendation that authoritative action should be taken to demonstrate to users of timber that constructional timbers of such sections as are in common use in the United States may be adopted with safety for similar work in Great Britain. I now have this subject under discussion with the timber controller, the Royal Institute of British Architects, the National Federation of Building Trade Employers, and numerous other agencies, as well as with the National Housing and Town Planning Council, and I feel confident that I shall be able to bring it about that provision will be made in the specifications of the future for the use of American timber in the grades and sizes which are in use in the United States. Whenever the shipping situation is restored to normal this will have the effect of doubling our exports as it will create an entirely new demand for our timber which has heretofore been supplied entirely by Russia, Sweden and Norway. I regard this as quite the most important result which my mission may be able to accom-

plish and I am sure that the timber trade would be interested to receive from the bureau a brief summary of this report of the National Housing and Town Planning Council insofar as it relates to the use of our standard sizes in the construction work which will take place after the war. You will understand that our scantlings, joists and boards are of somewhat smaller dimension than those customarily used over here. I have, of course, pointed out to these parties the fact that our principal construction woods—yellow pine and Douglas fir—are harder and stronger than the woods of Northern Europe which are used for construction purposes in Great Britain, and that therefore our smaller standard sizes produce fully the equivalent of strength and utility of the softer northern woods."

While this report refers specifically to the construction timbers produced in the United States, it is, nevertheless, of interest to Canadian lumber firms because timbers for construction form an important part of the Canadian lumber industry and, undoubtedly, Canadian lumbermen will make a strong bid for British trade after the war.

Montreal Trade Ask Farmers' Aid

The Lumber Industry Committee of the Montreal Chambre de Commerce reported at a recent meeting, through the chairman, Mr. Frank Pauze, that circulars had been sent to all the general storekeepers throughout the wooded sections of the province, giving them an idea of the present demand for wood of all kinds and the probable gigantic future demand. The circular asked the storekeepers to engage all those who were able to do it to cut all the wood convenient to their dwellings, either to exchange for merchandise or to sell it to the merchants, who could doubtless sell it again to the wood merchants in the cities.

In giving this report, Mr. Pauze said the farmer, as a rule, asked the general merchant what kind of wood he desired, and then found that he could obtain this wood only by going a long distance and at a greater expense, whereas the better method would be for the farmer to cut whatever saleable wood was easiest and most economical for him to get at. As a rule, the farmer asked the price which the storekeeper was willing to give, though it would be better for him to make his own price. The colonist or farmer always asked the merchant for an advance before starting work, whereas he should establish a credit which would be available to him from the first deliveries.

As the general merchant had an interest in exchanging merchandise for wood at a legitimate profit, as he had an additional interest in the general development of the region which followed, as the enormous demand rendered over-production impossible, as present prices were advantageous, and as in the future there would be a tremendous demand for export of such wood, as it would be to the advantage of the wood-cutter to be told that he could cut and sell advantageously the wood without dealing with the great companies who ordered certain trees at fixed prices and without causing detriment to the woods, the committee stated its belief that the general merchant in the wooded sections of the province was the man best to act as intermediary between the wood-cutters and the wood merchants of the city.

After a lively debate, the report was accepted, with thanks to Mr. Pauze for the trouble taken.

Birch for Gun Stocks

Birch is to be used to some extent by the United States Government for making gun stocks, especially during the winter, when it is thought that bad country roads may tend to render the supply of black walnut for gun stocks temporarily short.

After the director of lumber recently located a reserve supply of birch wood for this purpose, the Ordnance Bureau of the War Department has contracted for some 300,000 to 400,000 feet of so-called red birch measuring two and one-half inches thick, eight inches wide and wider, ten feet long and longer, No. 1 and 2 common and better. This material was found dried and ready for use in a number of leading hardwood lumber yards in various parts of the country, especially in Buffalo, Chicago and Philadelphia.

About 122,000 feet of the orders were placed through the Northern Hardwood Emergency Bureau, being the first order it has received from the government, it is said. Various prices are to be paid for the material. In some instances prices were considered high by government people, but hardwood dealers said that the sizes specified would leave on their hands narrow widths that would be difficult to find a market for elsewhere.

The names of the contractors are not made public for reasons of the director of lumber.

A discussion has been indulged in at Ottawa regarding the possibility of the government taking over a couple of paper mills and furnishing the newspapers with a supply of newsprint.

Newsprint Price Fixed for Three Months

R. A. Pringle, Dominion Government Commissioner to enquire into the newsprint situation, has sent an interim report to the Minister of Finance. He recommends that for three months, from February 1st, the price fixed by the government for newsprint be \$2.85 per hundred pounds. This is an advance of 35 cents on the price which the newspapers have been paying. Should the Commissioner, at the end of that period, find from the investigations of the United States Federal Trade Commissioner or from other investigations that this price is excessive, he reserves the right to make any reduction ordered retroactive to February 1st.

Commissioner Pringle finds from evidence so far available that from July 1st last a price of \$2.60½ would not have been unreasonable, but instead of availing himself of the retroactive arrangement and ordering newspapers to make up the difference to the paper-makers, he fixes the price for the next three months at \$2.85, which will produce the equivalent of the \$2.60½ for the previous seven months. No increase is ordered in classes of newsprint other than rolls.

Commissioner Pringle's report says in part: "In dealing with the question of prices to govern from February 1st, 1918, a difficulty presents itself by reason of the provision in the order of June 30, 1917, which is as follows: 'This order is made subject to revision as to price in the event of it being decided at a later date that the price now charged is either too high or too low.' A similar provision has been made in all orders fixing price subsequent to June 30, 1917. If an increased price were now fixed dating back to July 1, 1917, I have very grave doubts as to whether it would be feasible to collect from the small newspapers, from the Atlantic to the Pacific, the amounts that might be found due by them. Recognizing the injustice that might be done in the event of my making an order fixing price until I was thoroughly satisfied there was sufficient evidence before me to fix it with some degree of accuracy, I refrained from either increasing or lowering the price when making my order of November, 1917, extending the price then in force from November 20, 1917, to January 20, 1918.

Value of Pulp on Stump

"Some question has been raised in regard to the value of pulpwood on the stump. I have taken the position that pulpwood has a value. It has been contended that when obtained under concessions it should be taken into costs at the amount of the royalties paid in respect of it only. Where pulpwood has been purchased by the mills, it has been taken at cost in arriving at the cost of newsprint. Where a mill has large limits and their woodland investment is eliminated in considering their cost the manufacturer of newsprint has allowed a price of \$2 per cord, and there is abundant evidence to be found in the evidence filed with this interim report to justify this allowance. As a matter of fact the evidence shows that in the province of Quebec accessible pulp areas have become very valuable, and a much larger price than \$2 per cord has been paid for pulpwood on the stump in that province."

"A pulp and paper industry," the Commissioner continues, "is one of the most expensive industries to establish—it requires a capital of \$25,000 to \$35,000 for every ton of production, with the result that a successful industry cannot very well be established in the forest without an outlay of two or three million dollars, and once it is established my opinion is that pulpwood adjacent thereto has a value of \$2 per cord as cut."

The Commissioner also says: "The Federal Trade Commission will have to fix a price by the first of April, 1918, but as there is a provision for an appeal, and the appeal may not be disposed of until the first of May, 1918, I deemed it more advisable that instead of making the order operative to the first of April, 1918, I should make it operative to the first of May, 1918. In the meantime I am proceeding to hear all evidence that may be brought before me, and possibly the same evidence that will be brought before the Federal Trade Commission will be available for me."

The United States Hardwood War Service Board

The United States War Service Bureau has been organized under the auspices of the National Hardwood Lumber Association. The organization is now complete and over 2,500 concerns and individuals eligible to participate in the activities of the Bureau have been invited to co-operate. The Bureau will maintain quarters at 332 Munsey Building, Washington, D.C., to which address all communications should be sent.

The regulations of the Bureau have been approved by the Director of Lumber of the Council of National Defence. A letter has been addressed to the hardwood operators in the United States and Canada asking them to co-operate with the Bureau. Manufacturers are invited to send a complete inventory of their hardwood stocks, giving thickness, grade and location of the stocks. Sawmill owners are

also requested to furnish information regarding their daily capacity, timber supply and what wood or woods they can furnish to best advantage. In order that the Bureau may be thoroughly efficient it must be advised regarding changes in original inventories filed with it.

The War Service Bureau is open to all bona-fide owners of hardwood lumber in the United States and Canada and for the present no charge will be assessed against concerns co-operating with it. The National Hardwood Lumber Association plans to finance the Bureau at its own expense, but states that if it develops later on that some membership charge for orders placed is necessary, notice will be sent to hardwood operators.

Lumbermen and the "Excess Profits" Tax

A number of prominent United States lumbermen recently presented their views to the Internal Revenue Bureau regarding the application of the "excess profits" tax as it affects the lumber industry, and made a number of suggestions for its just application.

The statement which was laid before the Commissioner of Internal Revenue is too lengthy for reproduction here, but the following extract from the statement and the recommendations made by the lumbermen indicates what their views are on the subject:—

Extract from Lumbermen's Statement

"The underlying theory of the law is that a business, before being subjected to a tax on that amount of its income which is to be regarded as 'excess profits,' shall be permitted to earn some return (not less than 7 per cent. nor more than 9 per cent.) which shall not be taxable as excess profits, and that earnings over and above such return are taxable as excess profits.

"It is generally taken for granted throughout the lumber industry (and doubtless by all other lines of business) that the earnings that would be taxed would be the earnings from the investment which a business actually was employing in the conduct of its operations during the year for which the tax should be imposed; that is, that the amount of its employed capital for any taxable year should be deemed to be its gross assets at their reasonable current market values during the tax year, less the indebtedness of the business."

Recommendations Made to Revenue Bureau

These recommendations are made by the lumbermen:

1. That "invested capital" be definitely defined as being the fair market value of the property employed in a business, less any indebtedness. Where the rate of earnings upon "invested capital" is, as in this law, a factor in determining the amount of tax payable, the rate of earnings can not either in fairness or without enormously disorganizing the business be based upon any value other than the real value which produces these earnings in the period for which they are to be taxed. No administrative difficulties in determining actual values need be anticipated, as all lumber companies have already, as required by the income tax law of 1916, determined the value of timber as of March 1, 1913, and values subsequent to that date may be established with certainty.

2. That enhanced value over original cost of timber be definitely established as "earned surplus or undivided profits used or employed in the business." Such enhanced value is as truly employed in the business and therefore excluded from producing a return in any other business as is the cash originally paid into the business, and it is ignoring actual facts to ignore such enhanced value as a real factor in ascertaining earnings.

3. That the value of assets turned into a subsidiary corporation be definitely established as that corporation's "invested capital," irrespective of the par value of the stock issued therefor, where such stock is owned by or for the parent corporation; and that the business conducted in the name of such subsidiary corporation be definitely established as a continuation of a business theretofore conducted, within the meaning of Section 204, irrespective of the proportion of the parent corporation's business now being conducted by the subsidiary.

The establishment of such rules is of vital necessity to the lumber business, wherever may lie the legal power to make them effective.

The United States Government has placed an embargo on the exportation of all Douglas fir lumber which can be utilized for war purposes in the construction of airplanes and wooden ships. According to an announcement emanating from the Seattle office of the United States Shipping Board and Emergency Fleet Corporation, the embargo will not operate to curtail the output of the mills, but is designed solely to speed up production and to conserve lumber products required for war industries.

The sixteenth annual meeting of the Hardwood Manufacturers' Association will be held at the Hotel Sinton, Cincinnati, Ohio, on February 5 and 6. The program includes a number of important addresses and a smoker and vaudeville entertainment.

Busy Association Week at Montreal

The week of February 4th at Montreal will be well filled with live public meetings of more than ordinary interest to all concerned in the forest industries. On Tuesday the annual meeting of the Canadian Lumbermen's Association will be held at the Windsor Hotel, where the entire series will be held. On Wednesday, February 6th, the Canadian Forestry Association holds its annual meeting, the afternoon being devoted to public addresses, for which the Association is working up a particularly strong programme. R. A. Pringle, K.C., Paper Controller, will be one of the chief speakers. The public session will probably be continued on the morning of Thursday, February 7th. It is intended to hold a Wood Fuel Symposium to discuss in the most practical way the pressing problem of a cordwood supply to offset the coal scarcity. The Fuel Controller has been asked to introduce the discussion and will be followed by a railroad fuel expert, a fuel merchant, and several foresters who have given the subject particular study. On Thursday afternoon the Woodlands Section, recently organized in the Canadian Pulp and Paper Association, will open its first public meeting with addresses and discussions closely bearing upon the problems of the woods manager and the forester. The following day, Friday, February 8th, will be occupied from 10 a.m. to 5 p.m. with a special session, organized by the Quebec Forest Protective Associations, dealing particularly with fire problems and allied topics. To all of these sessions a cordial invitation is extended to the public.

The Quebec Forest Protective Association, representing the St. Maurice Forest Protective Association, Ottawa River Forest Protective Association, the Southern St. Lawrence Forest Protective Association, and the Laurentian Forest Protective Association, will hold a Forest Convention in the Windsor Hotel, on Friday, February 8th, the sessions starting at 10 a.m. and 2 p.m.

This will be the most important forest convention in reference to forest protection ever held in Eastern Canada. In addition to speeches on general forest preservation, there will be cinematographic pictures of forest protection, also an exhibit of fire signs, circulars, apparatus, etc., used in the forest protection work.

The annual meetings of shareholders of the St. Maurice Forest Protective Association, Limited, and the Southern St. Lawrence Forest Protective Association will be held at the Windsor Hotel, Montreal, on Thursday, February 7th.

Miscellaneous Notes of Interest to the Trade

The wooden steamship "Warnootka" was recently launched at the Western Canada Ship Yards, Victoria, B.C. This is the first of six hulls to be built by this company.

According to Hon. T. D. Pattullo, Minister of Lands for British Columbia, private firms in the province have made definite arrangements for taking out about 10,000,000 feet of airplane spruce per month.

Exports of forest products from Canada during the twelve months ending October, 1917, were valued at \$52,440,491. During the corresponding periods of 1916 and 1915 the values were \$53,899,809 and \$47,808,698 respectively.

A recent report from the United States says that a government demand for lumber is in sight as a result of reports that 50,000,000 feet are needed to build barges for handling freight on the inland waterways of the country.

Brigadier-General Alex. McDougal, of Ottawa, commanding the Canadian Forestry Corps in England, has been made a Companion of the Bath, while Lieut.-Col. John Donnelly and Lieut.-Col. John White, of the Forestry Corps, have received the D.S.O.

The Midland Shipbuilding Company has been incorporated at Ottawa by Norman L. Playfair, Marcus Smith, and Thomas C. Luke, all of Midland, Ont., to carry on the business of shipbuilding in all its branches at Midland, Ont., with a capital of \$1,000,000.

George Gordon & Co., Cache Bay, Ont., are sending out an attractive calendar for the year 1918 to their friends in the trade. A reproduction in colors of a painting entitled "On the Coast of Cornwall," by Daniel Sherrin, is a beautiful feature of the calendar, which is a large one, specially suitable for offices.

Statistics of Lachine Canal traffic show that during the 1917 season lumber from Ottawa for United States ports by United States canal boats totalled 37,442 tons, or 22,465,000 feet board measure, as against 39,591 tons or 23,754,000 feet board measure in 1916, a decrease of 1,289,400 feet board measure.

The pulpwood traffic to Canadian ports aggregated 24,425 cords, an increase of 8,309 cords, and to United States ports 66,177 cords, a decrease of 59,577 cords. With regard to pulp, nothing was carried to Canadian ports, against 2,000 tons in 1916, while to United States

ports the tonnage was 86,810, a gain of 26,693 tons—a total increase on the combined pulp traffic of 24,693 tons.

Personal News of Interest to Lumbermen

Mr. W. A. Walker, formerly manager of the Bank of Hochelaga, at Hawkesbury, Ont., has been appointed accountant of the firm of Edward Clark & Sons, Limited, Stair Building, Toronto.

It is officially announced from London that Lt. Col. Reginald M. Beckett, forestry corps, has been attached to the British war mission to America as Imperial Board of Trade representative for timber.

Mr. J. B. Reid, of Reid & Company, foot of Berkeley Street, Toronto, retail lumber dealers, is leaving, accompanied by Mrs. Reid, for a visit to Los Angeles on February 2nd. Mr. Reid intends to remain in the south for the balance of the winter.

Major Taylor, who is in charge of the spruce production for the government in British Columbia, requires close to 60,000,000 feet of spruce this year for the British war authorities. Contracts for 29,000,000 feet have been let or are pending, involving an expenditure of three-quarters of a million dollars every month for the whole of this year.

The Dominion Government recently issued an Order-in-Council providing for the commandeering, in any part of Canada, of lumber and building material needed for reconstruction of the devastated section of Halifax. R. H. Fraser has been appointed commandeering agent with full authority to fix prices which he deems fair and reasonable.

Major D. J. O'Donahoe, D.S.O., formerly secretary of the McAuliffe, Davis Lumber Company, Ottawa, has been decorated with the Distinguished Service Order and has been mentioned in despatches by Field Marshal Sir Douglas Haig. Major T. F. Elmitt, D.S.O., who is also well known in Ottawa lumbering circles, has been decorated and mentioned in General Haig's despatches. Major Elmitt is second in command of the 21st Ottawa Kingston battalion and before going overseas was engaged in the wholesale lumber trade.

Mr. H. H. Blanchet in a recent interview at Amherst, N.S., said he had discussed with the Honorable C. C. Ballantyne, Minister of Marine and Fisheries for Nova Scotia, the matter of bonusing wooden shipbuilding in that province. The Minister said he could not act on the suggestion. In a suggestion to the government Mr. Blanchet advises building one thousand ton wooden vessels with auxiliary engines to burn crude oil. He states that if the Dominion Government would give a bonus of \$20 per ton for wooden vessels for fifteen years all the shipbuilding plants in Nova Scotia would double their capacity.

Major G. H. Hanbury, Vancouver, B.C., is now operating a saw-mill "somewhere in France" near the Swiss boundary line. The mill is manned by a force of B. C. lumbermen, under Major Hanbury's direction. Lieut. "Laurie" Hanbury, a brother of Major Hanbury, is also connected with the mill. Major Hanbury was located in Winnipeg prior to joining the overseas forces. He went overseas with the first contingent and was wounded in the battle of the Somme. He returned to Canada during his period of leave and when returning overseas was summoned to Ottawa and asked to recruit a forestry corps in British Columbia.

Eastern Spruce for Airplanes

The Eastern United States Spruce Manufacturers have been appealed to for a maximum output of stock necessary for war preparations. The United States Government has turned its attention towards eastern spruce for airplanes. A suggestion has been made from Washington that the eastern spruce manufacturers organize an emergency bureau through which the government could deal to secure its spruce requirements.

The matter was taken up by the spruce manufacturers and after they had placed information concerning the class of stocks they could produce before the War Bureau a member of that Bureau went to Boston and went into the matter in detail with the result that contracts have been entered into with the spruce mills represented in that city. The government agrees to take every foot of airplane stock produced by these mills during the next six months at prices ranging from \$100 to \$125, according to lengths.

Log Ownership Problem in Court

Mr. Justice Letellier rendered judgment in the Superior Court recently upholding Peter McLean's claim to the proprietorship of a quantity of logs which were held by Joseph Lasalle at Point Fortune. The logs were gathered in from the Ottawa River during a spring thaw, but in face of plaintiff's proof of ownership the court ordered that Lasalle must accept McLean's offer of \$25 for his work of rescuing the logs and give up their possession. In default, Lasalle will have to pay \$107.80 to McLean, as the value of the timber.

Advertising for the Retail Yard

There is scarcely a retail merchant in the country who would not willingly place his business on a cash basis if he thought that he could make such a change in policy without reducing the volume of his sales and lowering his profits. Business has been so long established along credit lines that it is often hard even to think of its thriving on any other basis, and, to some extent, it is truly hard. In a farming community where the income for the year is developed in the fall at harvest time it seems to be the most natural thing in the world that the farmer should live on the prospect of this income, and time and custom have led us to the general following of this way of dealing with the farmer. It has worked out in a satisfactory manner, and nearly all the buying public indulged in that manner of dealing, and everyone seemed satisfied. There came a time, however, when those who were paying their bills regularly realized that they were paying a certain percentage of the costs of carrying on that credit business, and they commenced to demand that their cash bring them certain advantages that the credit buyer could not demand. As a whole, the retail trade were not quick to grasp the suggestion, and they refused to recognize the difference between the cash customer and the one who asked the long-time credit.

There were some men, however, who saw this great opportunity of operating a business on a cash basis, and there developed from this the great mail order houses with which the retail merchant of to-day has to compete. Instead of extending an unlimited line of credit and then charging a high rate of interest as the retail merchant did, they filled the country with their "cash with order catalogue," and relied on their cash discounts from the producer to give them their interest on their money, and also to put them in the position of preferred buyers with these concerns. The growth in their business is evidence of the soundness of their reasoning. While the retail merchant must, in a measure, be brought into active competition with these dealers, there is really no comparison in the service that is rendered, and the country merchant has the advantage in every case, if he will recognize this advantage and make the most of it. I think that one thing the dealer must do is, as far as possible, follow the popular demand for improvement in his contact with the public and in their service.

In this respect we believe that C. E. Axtell & Co., retail dealers at Deep River, have made a step in the right direction, and are unquestionably making a move for which they have seen a popular demand. In a territory such as is covered by their business there is undoubtedly a demand for both cash and time payments and in the notice, herewith reproduced, this enterprising concern cover this point in a very satisfactory manner. We predict that if they follow out in a consistent manner the principles involved in the first step to encourage cash payments in their business they will find that more and more of their dealings will be for cash. They must not lose sight of the fact that it is an advantage to make the cash buyer realize that his cash counts with them, but at the same time it is equally a disadvantage to place too much emphasis on the penalties of a credit account. In such a campaign as this concern has started the idea involved need not necessarily discourage credit buying, but rather encourage more cash buying. Not to make it look as though credit were a thing not consistent with economical handling, but that cash will gain certain concessions.—Mississippi Valley Lumberman.

¶ Acting on the advice of many of our customers, we have decided that on and after Feb. 1 we will allow a discount of 4 per cent. on all cash purchases amounting to 50 cents or more.

¶ Time accounts, unless other special arrangements are made, will be due in 60 days, and settlement is expected to be made within that time.

¶ This cash discount, as you know, is a very liberal one in our line, and will make your dollar reach farther than ever before. We find that by paying cash we are able to buy for less, therefore we can sell for less by getting the cash.

¶ We trust this plan will meet with your approval and co-operation.

¶ Outstanding accounts are expected to be liquidated at once, so we can start the plan right.

Advertising's Persistent Power

Advertising is no respecter of commodities, territories, peoples, nor times. It does its work just as thoroughly for one person as for another person in exact proportion to the thought, energy, enthusiasm, belief, judgment, persistency, and accuracy, in any language, in any place on God's green earth, if backed up and followed up by honest, efficient service, all the time. Advertising is not a piker's or a non-believer's game—it is an Honest-to-God paying investment.

Useful Credit Forms

A very interesting and valuable set of credit forms is being used by the members of the Buffalo Lumber Dealers' Credit Corporation. These forms were prepared by the attorney of the corporation, Mr. Babcock, and have proven quite valuable in safeguarding accounts, particularly those of contractors of doubtful standing. The forms number five in all, beginning with an order for the delivery of goods, and include an application for credit with a statement as to how loans and payments on the job are to be made, an order on the maker of the building loan—by the owner, an order of the contractor on the owner, and a guarantee of payment form. Those who have looked them over have been greatly impressed by their merit. A set may be obtained by writing to K. C. Evarts, secretary, 616 Prudential Building, Buffalo, N.Y.

Another set of forms no less useful are those adopted by the Building Material Men's Association of Westchester County. These are arranged somewhat differently, and cover order, method of payment, acceptance, and guarantee. These forms were prepared by a well-known law firm of New York City, and have given general satisfaction to users. Copies may be had from J. A. Mahlstedt, of the J. A. Mahlstedt Lumber and Coal Company, New Rochelle, N.Y.

How to Make a Forty-Year Shingle Roof

The first essential is good shingles.

For rafters use sized 2 x 4's or 2 x 6's, spaced on not over 2-foot centres, spiked solid and braced as load requires.

For roof boards or sheathing use good material, SIS strips 1 x 4 inches or random width to not more than 8 inches, spaced not more than two inches apart, and nailed solid with 8d. nails.

Preparation of shingles—If they are to be stained, use dry shingles, dipping each one in the stain not less than 8 inches from butt. Shingles that are not to be stained should be wet thoroughly before laying.

If additional fire-resistant quality is wanted, dip in good quality of mineral paint, or such other approved fire-resistant treatment as may be available.

Shingle nails—Solid copper, solid zinc, or hot-dipped zinc coated nails preferred. Where these are not available use old-fashioned cut nails.

Size of nail—For 5 to 2 inches or thinner shingles, 3d.; for thicker shingles, 4d.

Laying the shingles—Start at eaves and lay first course two-ply, giving 2 inches projection over crown-mould and 1-inch projection at gables. Throw out all defective shingles.

On one-third or more pitch lay 16-inch shingles 4½ inches to the weather; on less than one-third pitch lay 16-inch shingles 4 inches to the weather. On one-third or more pitch lay 18-inch shingles 5½ inches to the weather; on less than one-third pitch lay 18-inch shingles 4½ inches to the weather.

Use a straight-edge to make sure courses are laid straight.

Break all joints at least 1¼ inches, seeing that no break comes directly over another on any three consecutive courses, thereby covering all nails.

Nail shingles 6 inches from butt (for 4½-inch lap) and ½ inch from sides, and put only two nails in each shingle. Shingles wider than 10 inches should be split.

Lay shingles so that water will run with the grain, and do not drive nail heads into shingles.

Lay wet shingles with butts close together. Leave ¼-inch space between dry shingles.

Use 14-inch galvanized iron, not less than 26 gauge, or best quality old-style tin, heavily coated, for valleys; copper or galvanized iron for ridge roll.

Use galvanized or heavily coated tin flashing around chimneys. If tin is used, it should be painted two coats—one as soon as roof is completed and the second coat within two weeks. Galvanized metal should be painted two coats, but should be given thirty days for oxidation before painting. No patent dryer or turpentine should be used. Finish hips by laying a course of even width narrow shingles on both sides of hip over regular courses.—American Lumberman.

Logging Camp Meals Standardized

A despatch from Spokane, Wash., states that the loggers of the United States Inland Empire have promptly tackled the problem of working out a standard menu for logging camps following the lead of the Federal Food Administration in recently suggesting menus for fourteen days. The Inland Empire loggers have prepared standard menus for fourteen days which take as little meat, wheat and fats as possible, at the same time realizing that men who perform the vigorous, outdoor, physical work of logging must have a hearty diet, and that meat is one of the principal articles of food required in a well-conducted logging camp.

This May Land the Cheque

Here is a collection letter, suggested by System, which has successfully been used by one firm in collection of its well nigh hopeless accounts which have been followed up by statements, collection letters, and threats to call in an attorney. It is as follows:

"Just why you have not favored us with your remittance covering your account is not quite clear to us, and your reason for not doing so may be of such a personal nature that it is none of our business. But we would appreciate learning **when** you expect to send us your cheque."

Will Your Inventory Show This?

Following is a questionnaire which is being issued to members of retail lumber dealers' associations in the United States to determine accurate average cost of retail lumber distribution:

1. **YARDING**—Includes wages of superintendents, foreman, tallymen, sorters, laborers, watchmen, and all other expenses pertaining to the handling of lumber in and out of yard.

2. **CARTAGE**—Includes barn bosses', teamsters', and truck drivers' wages, horseshoeing, wagon repairs, feed bills, gasoline, oil, auto supplies and repairs, and all other expenses pertaining to the delivery of lumber.

3. **SELLING**—Includes salaries and expenses of all kinds, of all employes handling sales; also all commissions paid and all advertising.

4. **COLLECTING**—Includes all collectors' salaries and expenses; also all legal and agency expenses.

5. **ADMINISTRATIVE AND EXECUTIVE EXPENSES**—Includes salaries of principals of firms or officers of corporations; also all other office employees other than those handling selling and collecting.

6. **CASH DISCOUNT**—Paid in excess of amount received.

7. **INSURANCE**—One-half of annual amount of premiums. Includes premiums for all kinds of insurance carried.

8. **TAXES AND LICENSES**—One-half of annual amount. Includes personal property and government taxes; also city license.

9. **RENT**—One-half of annual amount. The actual rent paid is to be used. If under lease, then include whatever taxes, improvements or other assessments the lease requires you to pay. If your yard site is owned in fee simple then use an amount which the site would bring if rented to others for similar purposes. Ten per cent. of the assessed valuation is considered equitable.

10. **INVESTMENT**—Interest six months at 6 per cent. per annum. On capital stock, to the extent that it is paid up, plus surplus, if any. Capital stock and surplus represent investment, and the sum of both is considered as chargeable, with 6 per cent. per annum.

11. **INTEREST**—Paid in excess of amount received.

12. **DEPRECIATION**—For six months, total, consisting of: (a) At 10 per cent. per annum on original costs of office fixtures, sheds, stables, garages, planing mills, and switching tracks; (b) at 20 per cent. per annum on original costs of horses, wagons, automobiles, and all other equipment of every kind and character used in the business; (c) at 2½ per cent. per annum on the value of the average stock of lumber, etc., carried during the year.

13. **BAD DEBTS**—Estimated at ½ of 1 per cent. on sales.

14. **DRESSING**—Cost of dressing and re-manufacturing any and all lumber handled during this period.

15. **POSTAGE, TELEPHONE, TELEGRAMS, STATIONERY AND ALL OTHER INCIDENTAL EXPENSES.**

16. **TOTAL COSTS**—April-September, 1917.

17—**TOTAL SALES**—April-September, 1917.

The Seasoning of Wood

A treatise on "The Seasoning of Wood," by natural and artificial methods, written by Joseph B. Wagner, has been published by D. Van Nostrand Company, 25 Park Place, New York, N.Y. The book contains a very thorough discussion and description of the various processes employed in the preparation of lumber for manufacture, together with detailed explanations of the uses of lumber and its characteristics and properties. Several chapters at the commencement of the book are devoted to descriptions of timber, which are both interesting and useful. Many illustrations are published throughout the book, giving an excellent idea of the various kinds of wood and the methods by which they are seasoned. An interesting section is devoted to a consideration of the enemies of wood, such as timber beetles, borers, worms, and other insects, and definite and extensive information is given of the various methods of preventing injury done by these insects. Separate chapters are devoted to a study of the distribution of water in wood, the nature of the seasoning of wood, the advantages of seasoning, the difficulties of drying wood, how the process is carried on, etc. The various types of dry kilns are explained and illustrated in detail, and a separate chapter is devoted to a description of various helpful appliances used in kiln-drying. The final section

of the book includes a bibliography, glossary, and an index of Latin and common names. The book is published at the price of \$3.

Speeding Up Spruce Production

A meeting was held recently at Victoria, B.C., between the Chief Forester and the district foresters. One of the matters taken up was the speeding up of the spruce logging business, certain facilities for which were granted by the provincial executive in a recent order-in-council. The Chief Forester and his assistants will co-operate with the Munitions Board to the utmost of their ability in the production of spruce. The order-in-council passed by the executive grants powers to the government to arrange with the Imperial Munitions Board for the logging of airplane spruce on all vacant areas of Crown lands and calls upon the holders of such to proceed with the necessary operations forthwith. On failure to comply on the part of such holders the right is reserved to the Minister to instruct the Department of Lands to make its own arrangements in co-operation with the Imperial Munitions Board, with equitable compensation to follow in respect of timber to cut.

Death of E. S. Singer of Guelph

The death occurred recently of Mr. E. S. Singer, of E. S. Singer & Company, Guelph, Ont. The late Mr. Singer was 69 years of age and was born in Alsace Lorraine. Mr. Singer had an extensive experience in the lumber business, first as a buyer of mahogany logs in South America, then in St. Louis, Mo., where he organized the Waldstein Lumber Company. After twenty years in St. Louis Mr. Singer transferred his activities to Guelph, Ont., where he was engaged with the Robert Stewart Lumber Company until he formed the E. S. Singer Company to handle yellow pine, hardwoods, B. C. shingles and cooperage stock. Mr. Singer held the position of inspector in Canada for the National Cooperage Manufacturers' Association.

Emergency Bureau for Box Industry

The National Emergency Bureau of the wooden box industry has opened offices in Washington, D.C. The requirements of the United States Government for wooden packing boxes for the handling of munitions, etc., are very great. In order to meet these needs the box industry decided to establish an emergency Bureau representing the box manufacturers throughout the country. It is said that the War Department is buying at least 20 per cent. of the wooden boxes produced in the United States.

Calendars for 1918

An attractive office calendar has been sent out to their friends in the trade by the Campbell MacLaurin Lumber Company, Ltd., Board of Trade Building, Montreal. The calendar is a large one, specially suited for offices, and carries a large colored landscape, entitled "Evening Glow."

"A Cozy Evening in the Olden Days," is the title of an attractive color reproduction which has been selected by the C. Beck Mfg. Company, Limited, Penetanguishene, Ont., as a decoration for their calendar for the year 1918. The calendar is handsomely designed and will be welcome to the friends of this firm who are fortunate enough to secure a copy.

Trinidad Traders Interested in Canadian Lumber

Mr. Edgar Tripp, Canadian Commercial Agent, Trinidad, sends under recent date a list of traders in Trinidad who are or may become interested in imports from Canada. The names of firms represented in the list may be obtained on application to the Commercial Intelligence Branch of the Department of Trade and Commerce (refer File No. 19886). One of the articles included in the list is lumber.

The Copeland Shoepack Company of Midland

The P. T. Gendron Shoepack Company, of Midland, Ont., have changed the name of their company to the Copeland Shoepack Company of Midland. No change in the personnel of the company is involved. Mr. A. E. Copeland is the sole owner. The business of the Copeland Shoepack Company of Midland has been in existence for over two years and the company have been successful in creating a large demand for their excellent product. During 1917 the company tripled its sales in Ontario. The Copeland Shoepack Company of Midland are continually seeking to meet the requirements of the market as fully as possible and an indication of this is the fact that they recently added to their extensive lines of shoepacks a new line of river drivers' boots, which undoubtedly will become as popular as their other well known lines.

University Night Schools for Logging Camps

College professors cannot hope to get far with this work without the advice and the helping hand of the lumberman. Therefore this subject is very properly taken up in public meetings of the Pacific Logging Congress.

I may be able to suggest some few ways in which the different universities may co-operate with the timbermen in this work if it is undertaken, yet it remains for the lumberman and practical logger to each add as many pointed, practical suggestions as he can, both now and hereafter, if this night school idea is to amount to very much.

Labor is, after all, in a strict sense only another form of machinery. Any invention or suggestion which tends to improve our machines, is, of course, welcomed by all. We want better machines and are willing to go to some trouble and expense to secure these. As to the matter of animal labor, we are all agreed that a horse of a certain build, weight and disposition is the most suitable for work in logging camps, but when it comes to men, what do we have as a standard? We find the situation very much mixed, indeed. One boss wants Hungarians, another Russians or Poles, while a third is equally pronounced in his preference for men of Scandinavian extraction. About the only things on which these logging bosses agree are:—

First: None of them want booze-fighters, and yet they practically all have them to a greater or less extent.

Second: They all want steady men who will stay on the job for the greatest possible length of time.

Here are two points of agreement among loggers worth noticing. They also raise two questions. First, how can we eliminate the man who drinks to excess—periodically quitting to go off on a spree? And second, how can we get steady men who will settle down with one company for a period of years? What general scheme can be offered for bringing these two things about?

I shall offer only a general suggestion. It is this: We should labor together to make better men in every division of the lumber industry, even including the lumberjack. I know that some men will say that you cannot make a whistle out of a pig's tail—that a lumberjack is just a lumberjack and nothing more. I will admit that this is true of many lumberjacks I have seen; and that many of these men are so "down and out" that there is little chance of doing much to advance them. Yet I am not willing to admit that this is the case with a large majority of the younger men. Even though they be foreigners and their opportunities for advancement have been very limited indeed, I know that they will take to training be it ever so elementary, both kindly and eagerly if the work of getting them started is properly handled. I have seen this with my own eyes and I know it is being done in other lines. Employers of labor of all classes are learning that it pays to feed the minds of their men as well as it does to feed the bodies; that a healthful mental state is just as important as a healthful physical state. In fact, the two should and must go hand in hand before any system of labor is truly sound. Where they do, conditions are invariably better than where they do not. This fact explains why the largest employers of labor are constantly banding to the task of improving the conditions of their men and also doing what they can to encourage the men to employ their spare time in improving themselves rather than in wasting their wages and debauching themselves.

If this self-improvement is good for one class of men why not for another? If the brick maker or the foundry hand is better off and also better satisfied to be improving his mind at night, why not the lumberjack? I believe that every man in a logging camp from the dago who "slinga de rig" to the man who pulls the throttle on the biggest bull donkey, can be helped by carefully arranged and properly given courses in night school work.

I fully realize that in many of the smaller and more transient camps this would be entirely impracticable, but in the large, more or less permanent camps, I am sure that good will result to the operators as well as to the men from an undertaking of this kind, and it need not be very expensive.

How can the different universities co-operate with the operators

in this work? I should say that they must get together on fundamental principles. What are the fundamental principles? The following are worthy of consideration:

First: The parties benefitted should pay for the service they get. Something for nothing should not be encouraged even in educational matters. We are taxed for the education of our children. Men in the logging camps should pay a small fee for the privilege of attending night school. They will work harder and appreciate more highly what they get.

Second: The universities should put this work on their extension lists. They should pay the traveling expenses of the faculty members giving the various courses, just the same as is now done in giving the courses in agriculture and home economics extension work and in the farmers' short courses. This is also done in night school work in the cities in a number of mechanical, economical, cultural and technical subjects. In many of these the university employs special instructors or sets aside a portion of the time of certain instructors for this work. The timbermen have a right to demand this of the universities. No class pays a heavier proportion of taxes toward supporting our schools than does the timber owner. Why should he not demand the same assistance in the way of improving the class of labor he uses, that is accorded to large operators in other fields? I have for years maintained that the forest resources of our country and those handling them, have been neglected in many ways as compared with agriculture, mining, engineering, etc. You have been tardy, considering the great value of the resources involved, in securing recognition in the way of properly manned and equipped forest schools and experimental laboratories, as well as adequate appropriations for the great experimental problems confronting you. The work of training technical men to assist the timber owners in their many fields has not had the financial and moral support it deserves. Scarcely a single forest school in America today is receiving its fair share of university funds, both state and national, and none of them have a teaching and experimental staff at all comparable in either numbers or specialists, with the departments just named, although the problems they face are fully as great as can be found anywhere.

I know that some will attempt to condone this condition by explaining that forestry is new in America. Forestry is not new here. We have been practicing a certain kind of forestry since the landing of the Pilgrim Fathers, but it has not been the best kind, and what we still need is more light on this great subject. If our universities spend vast sums on subjects involving other great natural resources, thereby enabling those operating in these fields to use more refined and scientific methods and to have a higher and better class of labor, why should not forestry have its full share? This is, in a way, a digression, but I wish to leave the facts it contains for your further consideration. "Lest you forget, stick a pin here," the lumbermen as a class, should take a keener interest in the forest school and their welfare.

Third: The forest school faculties and the timber operators should get together and work out a course or series of courses which are practical and which can be given in logging camps with the lowest possible expense considering the value to be secured.

By way of suggestion, the following are some things which could be done by this committee of forest schools and lumbermen:

1. Reading could be outlined. There are now many valuable books and bulletins on forestry subjects written in such language and style that the layman can get much information simply by reading alone. A few lectures and explanations should either accompany or follow these reading courses, which should generally close with some kind of an examination.

2. Technical and popular trade journals and periodicals could be secured and made accessible as general reading. Seminary hours can be held once or twice a week for the general discussion of the best articles in each. This method has been found to be one of the greatest to stimulate thought among college students, and create a desire to learn. It could easily and cheaply be adapted to the night school work in the larger camps.

3. An inexpensive library could be provided, consisting of:

- (a) Government bulletins on forestry and related subjects.
- (b) Standard texts and books dealing with trees, woods, tree diseases, forest insects, logging and lumbering machinery, forest protection, etc.
- (c) Reports of associations, such as the Conservation Association, American Forestry, State Forestry Reports, Logging Congress Reports, Protective Association Reports, etc., Lumbermen's Meetings.
- (d) Some good standard books on biography, history, travel, etc. Also some good magazines.

In some of the larger camps the Y. M. C. A. has already done considerable good work along this latter line.

Fourth: The universities can help by loaning their faculty members. Each institution is allowed to pay the travelling expenses of its faculty members when travelling within the state on business connected with educational or departmental matters. This night school work is both, so far as the forestry departments are concerned. Other departments can legitimately enter the work in certain courses from an educational standpoint, for many of these men should be taught English and civics and should know something of our laws and their own rights and privileges.

The universities can also help by loaning illustrative material needed, such as specimens of wood, herbarium specimens of cones, leaves, seed, bark, fungi and mounted insects, wood and lumber damaged thereby, etc. Apparatus could also be loaned, such as lanterns and microscopes with slides, maps, charts, etc.

Fifth: The timbermen can also help by providing some kind of room or place where this idea can be put into practice. This should not be an expensive place, but should be large enough, well lighted and ventilated and kept warm and clean. The Y. M. C. A. rooms or the welfare car, already provided in some cases, could be made to serve admirably for this purpose. Many operators can help by giving practical talks to the men on various subjects.

Sixth: The Y. M. C. A. will be glad to be of any service possible in forwarding the night school work. Their secretaries are often men of considerable experience in night school work. They can help in very many ways. Especially their personal influence is apt to create an added interest in this work.

Seventh: The Forest Service can furnish a limited amount of highly valuable aid by allowing their specialists to lecture in the field along the special line of effort of these Forest Service experts.

Eighth: The lumber and trade journals can help by publishing outlines and announcements of courses to be given and in many ways use their columns to create a favorable sentiment toward this work.

Ninth: The very spirit of a scheme of this kind is a great encouragement, especially to the younger and better class of men, for it unlocks at least one small door of opportunity, giving them some chance to learn and perhaps to advantage.

In conclusion, I would suggest that a committee of representative timber operators and instructors from the forest schools be appointed for the purpose of determining whether or not this idea can be worked out in such a way as to be practicable, and if so, to prepare in outline a limited number of courses which may be offered in the larger camps.

T. and N. O. Pulpwood Shipments

Pulpwood shipments were made during November, 1917, by the T. and N. O. Railway to Merritton, Ottawa, Thorold, Toronto, St. Catharines, Ont.; Niagara Falls, Suspension Bridge, Buffalo, Fulton, and Norfolk, N.Y.; Johnsonburg, Pa., and Port Huron, Mich.:

	Cords.
November 1 to 7	1,375
November 8 to 14	1,951
November 15 to 21	1,549
November 22 to 30	1,883
	6,758

Representing a decrease of 773 cords compared with preceding month, or 10 per cent., which was due to car shortage.

Wood pulp and paper shipments were as follows:

	Wood pulp. Tons.	Paper. Tons.
November 1 to 7	279	780
November 8 to 14	546	1,639
November 15 to 21	258	1,136
November 22 to 30	960	2,212
	2,043	5,767

This is an increase in wood pulp shipments of 92 tons, or 4.7 per cent., and decrease in paper shipments of 13 tons, or .21 per cent.

The Foundation Company, Victoria, B.C., is completing the laying of the keel of the fifth wooden steamer to be built at its plant.

Coupling Science to Timber Crops

By G. C. Piche, chief forester of Quebec.

An address before the Woodlands section of the Canadian Pulp and Paper Association.

I have always wondered why such a class of men as the pulp and paper manufacturers were not taking more care of their forests, why should they bend their efforts only in one direction. It is very sensible to improve your fabrication, but why should you leave your forests, your source of raw material in a bad state; why not apply the same methods of scientific management that you employ successfully in your mill for the production of your timber supply; why leave your forest operations in the hands of your choppers, of your jobbers who have only a precarious interest, instead of employing technical men as you do in your mills. Is this not a lack of foresight, and—if you would be sincere—have not some of you found that the savings made in your mill by your improved methods have been more than wiped out by the increased cost of your wood? Why should the cost of your wood always be on the increasing scale, whereas you have succeeded in halting your cost price in your mill, to an almost fixed basis, and then when the cost of labor and supplies follow the same trend on both cases? I know some will object that you are obliged to go further for your logs, that driving is becoming more and more expensive, but why did you not foresee this?

It is becoming a necessity, an imperious want that the paper men will devote some of their energy—to the care and handling of their woodlands. It is obvious that a well-defined program should be followed and the work must be systematized if results are desired.

A Permanent Forest

The pulp and paper industry, being established for a long time can afford to manage its forests on a permanent basis, better than any other class of lumberman. Therefore there should not be any hesitation in considering the question from a broad point of view; and though the expenses may seem high in many cases they will often be an addition to the capital of the company, just as when you replace a type of screening machine by a more efficient one. The question of depreciation of timber limits is another subject that should be considered broadly—and I am glad to note that at the last enquiry directed by Mr. Pringle this was agitated with good and telling effect for many who ignored it before.

I suppose that you expect me to draft a sort of a program. I feel the necessity of one, and however imperfect it may be, it will pave the way for discussion, for suggestions, and something may come out of it. Naturally the first effort to be made is to secure the proper man to put in charge of your timber lands; without any question this man should be a forester, a man with technical training, and I hope that my friends of the technical section will not dispute me in this matter. You do not go to any plain man for your chemical work, but employ a chemist; for your engineering work you employ a real engineer; why not employ a good forester for your forest work? Some will object that a practical man is needed. This question of practice has always been brought forth by the men who wanted to save their jobs when a better man appeared on the stage. A forester needs practice as much as the chemist, as the engineer, but he does not require to have grey hairs, he will not be any good then. He will be afraid of going into the woods, his rheumatism will prevent him from plodding all over the works. A forester if given a chance, if employed for the work for which he has trained himself, will certainly do good.

Inventoring Timber

The next move is to make an inventory of your timberlands. How can you work without this data? You keep a strict account of your stocks of sulphur, of coal, of china clay, of colors; why should you not do the same with your forest? The operations to be conducted in an efficient manner must be directed by the head office according to a working plan and not be carried in a haphazard way as done now. The timber should be cut not only on one river, with the chances of jamming, but on different streams and on several grounds so as to equalize the cost price, instead of allowing it to jump every year. The improvements to be made in the way of portage roads, of depots, of river cleaning, of dams, should be known in advance and a fixed budget prepared every year for the carrying of this class of work.

Studies should be made of the rate of growth of the various species found on your timberlands; so as to know how they should be cut. Investigations of the old lumbered tracts should also be conducted so as to find what have been the results of the lumbering as it was done then. A good deal could be learned this way which would help greatly for drafting plans of lumbering on similar areas. We have begun this work in a few localities, but the province is too large and the interested should have the same studies made for their own benefit.

Reforestation is another subject that will require to be looked

after. With the increasing cost of labor and supplies, it will become more and more necessary to have a larger yield of raw material per unit of surface; instead of culling on an average 2,000 feet per acre; it will be far more economical to cut in 30-40 years from now 5,000 to 10,000 feet per acre. I claim that most of the paper men are limit poor, as a mill producing 100 tons per day would only require a forest area of 200,000 acres, or 500 square miles, if same was managed to produce wood properly. What an enormous capital is carried uselessly by the companies on account of the fact that their holdings are too poor in timber. I calculate that by adding \$1.00 more to the cost price of your wood you could reforest enough land each year to insure you a permanent supply for the future. Naturally the question of time will have to be considered here, but in your plan you can take care of this matter.

The utilization of the hardwoods is another subject that should be taken into consideration. It may be necessary to modify the present methods of lumbering in order to assure a more complete utilization of all the trees now found on the timber limits, but this problem requires an immediate study, and we should all unite to find the solution.

The Gasoline Locomotive in Logging Operations

In an address before the Pacific Logging Congress, Mr. H. H. Logan, of the Maritime Motor Car Company, Limited, Vancouver, B.C., spoke on the "Gasoline Locomotive in Logging Operations." In the course of his address Mr. Logan said:

The first machines that we built were largely experimental, and were not as well constructed as the later types, but in spite of that have done good work, and are still at it. Three of these have been used for hauling concrete and other material on construction work, over a bad track with sharp turns and grades, and handled by inexperienced drivers. As a result of our experience with these, we concluded that we were working along the right lines, and in the last two locomotives that we have built we followed the same general principles, and corrected any faults that we found in the first machines. We have greatly improved many features for efficiency, convenience and durability, and our latest machine, which weighs four tons and runs on a 42-inch gauge track, is so easily operated that it could be handled by a boy. It is used in the yards of the Coughlan shipyard in this city, to transfer material from one place to another, and is giving absolute satisfaction.

The largest locomotive that we have built is in use at the logging camp of John K. O'Brien, at Careden Bay, B.C., for taking a pair of logging trucks up a two per cent. grade, and handling the load of logs down the grade. At last report the rails were being laid, and it is likely that by now the logging is under way. Mr. O'Brien was the first to suggest to us the possibility of using a gasoline locomotive for logging, but since that time I have talked with a number of practical men familiar with the logging industry, and it is the opinion of a good many of them that it would be a great boon to the industry if such a machine can be built to suit the work. It would require much heavier machines than we can build in our present plant to take care of the heavy grades where it is often necessary to log, and where geared steam locomotives have been commonly used.

In our designs we have endeavored to produce as simple and accessible a machine as possible, so that the services of an expert would not be required every time that some little thing needed attention.

We have adopted Hyatt roller bearings for use on all shafts and axles, in order that the greatest efficiency may be obtained, together with a minimum of trouble. These bearings are used in a housing of our design that is self-aligning and dustproof, at the same time holding an oil bath to assure constant lubrication providing that they are filled from time to time.

The self-aligning feature is important as it allows the locomotive to distort on an uneven track without springing and binding the shafts and other parts of machinery. We use cut steel sprockets and the best grade of roller chain, and as far as possible, we use the friction drive, which eliminates a great deal of mechanism that costs extra money in the first place and is more expensive to maintain. We have found the friction drive absolutely successful, but we realize that it has its limitations, and on the larger machines it would not be practicable to use it, for mechanical reasons.

The machines that we have developed are so simple that an ordinary millwright should be able to take care of the up-keep and repairs, and they are built with a margin of safety that should insure a minimum of delays on account of trouble.

Within a few months we expect to build one or more locomotives weighing 18 tons, which would have a greater demand in the logging industry than any that we have yet undertaken. These, however, are for yard work, but should give a good idea of the practicability of our design on the larger machines.

Now we have considered steam, electric and gasoline locomotives with their advantages and disadvantages, and it can readily be seen that for an out-of-the-way place operating on a moderate scale, the electric locomotive is out of the question. That leaves it between the steam and the gasoline machines. With the steam locomotive it is necessary to have a licensed engineer, but not so with the gasoline machine. The steam locomotive may set fire to the forest, but there is small chance of the gasoline machine doing that. The steam locomotive must be attended while waiting, in order to keep the steam and water right, but the gasoline locomotive may be stopped and left that way until the moment when it is required for work, and does not consume any fuel whatever while standing.

The fireman or engineer of the steam locomotive has to come out early in the morning to get steam up to start work on time, but the driver of the gasoline machine does not need to have his alarm clock wagging its tail before it is time for the whole crew to tumble out, and he knows that when he arrives with the rest of the crew, he is ready to put his machine to work.

The fuel cost for operating the gasoline locomotive is in its favor, especially by using distillate, which if a proper carburetor is used, will reduce the fuel cost upwards of 30 per cent. from the cost of gasoline. We have not yet made any tests for fuel efficiency, but operators report good economy.

The fuel consumption will vary greatly with different conditions of road, grade, load, etc., but for a general idea, I will give the figures of an Eastern firm who have been in the gasoline locomotive business for a considerable time, and who should be in a position to furnish accurate data.

On their three-ton locomotive using an engine of upwards of 23 horse-power, they figure a fuel consumption of from five to six gallons for 10 hours, and on the six-ton machine with a 50 horse-power engine, they figure from 10 to 12 gallons for 10 hours at general hard work. You will notice that this equals .024 of a gallon per horse-power per hour, and is possibly a good average estimate.

The initial cost of the gasoline locomotive should compare favorably with that of the steam locomotive, and in the lighter ones particularly, its cost should be less for the same capacity.

There are many other things that might be said on this interesting subject, and after we have gained additional experience, I may be able to go into the subject so as to give more definite information to those interested, for in this I have only touched the high spots, and have not endeavored to assemble any data other than what I have from memory. I have also tried to avoid technicalities, and to discuss the subjects from the standpoint of a man who is considering the type of locomotive that is best suited to his requirements, and I hope that some of the facts and suggestions that I have offered may be of practical use to someone interested in the subject.

If this paper should be the means of leading to actual tests being made in a logging camp under average conditions, with a suitable machine, I believe it would measure up to all that I claim for it, and in addition would furnish accurate data on which to base further calculations and comparisons.

If any of our experience is of use, as I believe it is, in assisting to conduct such a test, or in any way assisting in getting down to definite and official facts that could be relied on in general practice, I should be pleased to co-operate in any way within my power, for I feel, as many others do, that it should be possible, without great expense to get this information in concrete form, and it should not be necessary to try the most extreme case first, but to approach it by degrees, and I believe such research and experiments as may be necessary to arrive at the most suitable designs will be well rewarded, for "It takes practice to make perfect," and "The proof of the pudding is the eating."

Watch Exchange on U. S. Business

A wholesale lumberman in Toronto, during a recent interview, stated that some Canadian lumbermen who are shipping quantities of stock to the United States are not securing the benefit of the difference in exchange rates as they should. He stated that one lumberman he knew of had lost in the neighborhood of \$1,000 through neglecting to take this matter up with his banker. The difference in exchange usually varies from $\frac{3}{4}$ to 1 per cent. in favor of the United States, and on one occasion recently reached as high as $1\frac{1}{2}$ per cent. This difference in exchange amounts to quite an important item when a large amount of business is being transacted. The wholesaler who brought up this point says that when lumbermen present their cheques in payment for shipments to the United States at their banks they should insist on the banker crediting them with the difference in exchange. He pointed out that if the premium happened to be on Canadian money instead of United States money, the banker would not forget to discount the cheque and that the rule should work both ways.

Points Worth Remembering in Connection with Rubber Belts

(Contributed by Dunlop Tire & Rubber Goods Company, Limited)

No one part of a belt should be subjected to undue strain; neither should a belt be run against the splice.

Shift belts slowly and carefully with a shifting gear that will not damage the belt's edges.

Lagging pulleys with rubber-frictioned duck increases belt adhesion. Belts should be put on the pulleys at low speed only.

Never run the seam side of a belt next to the pulley, as the other side is specially designed to take up the strain.

Lace-holes should be cut small, clean, and round, not too close together nor too near end of belt; otherwise they are likely to pull out.

Keep driving surface clean. Avoid sticky dressing—it dries the rubber, causes peeling, and forms lumps on the pulleys as well as on the belts.

When splicing or lacing belts, cut the ends absolutely square and true, and about $\frac{1}{8}$ to $\frac{1}{4}$ of an inch—according to size of belt—to each foot shorter than the actual distance between and around pulleys.

It is bad practice to work a belt to its full capacity. A reasonable margin of safety should be allowed to take care of any extra strain to which the belt might be subjected in the course of its use. The more exacting the conditions the greater the margin necessary.

Flapping when running at high speed is due to air being trapped in between belt and pulley. To overcome this condition, bore a few small holes in the pulley. This will increase belt adhesion, as will also holes in the pulley plugged with cork.

Never stand in front of a quickly-revolving pulley or main drive wheel at any time. Should the belt break, serious injury or death might result from the force of the blow.

Do not unnecessarily expose a belt to excessive heat—either artificial or that caused by friction—or injurious substances, such as oils or greases. Many belts are damaged by oil leaking from bearings or being splashed on to them. Avoid vertical suspension of belting wherever possible.

Keep belting square in the centre of pulley, and see that the crown of pulley is not greater than $\frac{1}{8}$ of an inch per foot; otherwise the centre of the belt has to bear unnecessary strain.

As a belt seeks the highest point of the pulley, and that highest point is the centre of the crowned pulley, "running-off" will be avoided. If not crowned, driving and driven pulleys must be exactly parallel, or uneven stretching will result, and "running-off" will be a common occurrence.

When new belts are put on old or badly-arranged pulleys or shafting, the use of idlers, to take up the slack, is preferable to the crossing of the belt, as the same result is secured with less injury. The best plan is to buy new pulleys and rearrange the shafting.

Avoid crossing belts, however, wherever possible. Do not use belt tighteners or idlers unless absolutely necessary. Crossing belts tends to twist and strain them, and idlers and tighteners increase belting costs through extra wear. It is much wiser to arrange equipment in the first place, so that the practice of crossing belts or using idlers or tighteners will not be necessary.

Should the belt slip, moisten it very lightly on the pulley side with boiled linseed oil. Slipping is caused by overloading, the accumulation of dust, pulleys out of alignment, belts being too loose or drying up, and through general neglect. The possibility of a belt slipping decreases with age. It is more likely to slip when running at low speed than at high.

Provide pulleys of ample diameter and face to avoid abnormal stretch on the outside and compression on the inside, caused by the constant bending of the belt. The width, thickness, and length of belt govern the size of the pulley. The heavier and thicker the belt the larger the pulley should be.

When rubber belts are to be idle for any length of time, they should be dusted well with powdered soapstone, rolled up on a wooden core, and carefully wrapped in heavy canvas on which a generous supply of soapstone has also been sprinkled. The addition of a good dressing before applying the soapstone keeps the belt pliable. The belt should then be stored in dark, dry, and cool quarters. Light, heat, and extremely dry air tend to rot rubber, while darkness and moisture preserve it. If the above method is carefully observed when storing belts shrinkage will be reduced to a minimum, and no deterioration should be apparent when the belt is again put into use.

National Wholesalers Add New Feature to Service

The National Wholesale Lumber Dealers' Association in a recent edition of their Bulletin published several legal opinions on subjects of timely interest to the trade. These legal opinions are a new feature of the Association's service.

One of the questions asked and answered concerns the liability of a mill which is unable to fill contracts owing to inability to secure cars. The answer is that the inability of the mill to secure cars is no excuse for failure to carry out its part of the contract. It is there-

fore liable for damages unless this point has been provided for in drawing up the contract.

Another enquiry concerns the three per cent. tax on freight charges. In a letter to its members on October 3rd, the Association suggested that the following clause be used on quotations and orders:

"These prices are based upon present existing freight rate and if the rate is advanced before shipment the buyer is to pay the increase. Any expense caused by government tax or regulation, to be paid for by the buyer in addition to contract price."

The Association says the last sentence in this clause covers the three per cent. tax on freight bills and in this connection they have been asked for information as to whether the tax is effective on shipments started prior to November 1st and on which freight would be collected after that date. They are also asked for information as to who is to pay the freight tax on orders accepted without the tax clause and where shipments are made after November 1st.

The reply deals with the question in detail, but summarized is as follows:—Where the clause suggested to the Association members is made part of the contract, in the opinion of the Association's attorneys, there is no doubt that under such a contract the buyer is to pay the three per cent. freight tax.

The Farmer's Ideals of Comfort Changing

Not every retail lumber dealer is properly aware of the transformation that is taking place to-day on the farms of North America—a transformation which is fraught with importance to the retailer. The merging of the ideals of comfort entertained by the farmer and the city dweller is making the farmer a greater user of lumber than ever before, and this movement is only in its infancy. Just how the change is being brought about and what it involves was outlined by R. S. Whiting, architectural engineer, in an address upon farm buildings at the University of Missouri recently.

"Fresh air is essential to health," he said. "Sunlight is one of the most powerful disease-destroying agencies known. A building affording these properties and at the same time giving ample shelter from the winter cold and summer heat is the object sought in the construction of farm buildings in Northern and Southern as well as Eastern and Western states.

"The arrangement of the yards and fields and the location of the well, machinery shed and granaries should be considered carefully in locating the barn. It should be at least 200 feet from the house, and in such a position that the prevailing winds do not carry the odors from the barn towards the house. Under the best sanitary conditions possible there will be some odor from the barn, and the amount of time saved in going to and from the barn by having it close to the house will not be due compensation for enduring the obnoxious odors. The barn should not be made the most conspicuous farm building. It is secondary to the house, and should be so located as not to obstruct views from the house. Usually a location at one side and somewhat to the rear of the house will be found the most suitable.

"The American farm home is coming to its own. It has suffered neglect during past years of industrial progress and territorial expansion, but there is no longer so great a need as formerly for sacrificing the home "to get a start." Moreover, the American farm family knows to-day, better than ever before, that home improvements are necessary to a realization of the things in life that are most worth while. It knows, too, that the future holds greater opportunities for the farm home and greater incentives for improving it than have been obtained in the past.

"The physical and social lines between country and town are growing less distinct. City folk are building their homes in the country and farm families are driving in their automobiles and riding on interurban cars to church and school in town. The obscure farmhouse of to-day may be on a paved highway or a boulevard to-morrow. Such changes are now accomplished facts in some of the older states, and they are encroaching rapidly upon the newer ones. With better roads and more automobiles, with telephones and other home conveniences, there will be better farmhouses, also, and more people who will want to live in them."

Speaking before the Insurance Institute of Toronto at its January meeting, E. J. Zavitz, Provincial Forester for Ontario, gave a talk on Forest Fire Protection in Ontario. He described how under the Forest Fire Protection Act passed at the last legislature the province is divided into 34 districts with a chief ranger in charge of each district. Mr. Zavitz explained that about 1,050 fire rangers or patrol men are scattered throughout northern Ontario. Besides these there are lookout towers connected by telephone to central parts of communication. Boats equipped with fire-fighting equipment are also used on the navigable rivers. The lecture was illustrated by moving pictures which showed the lookout towers, the various methods of transportation and the methods used in fighting the fires.

WANTED & FOR SALE DEPARTMENT

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line (14 agate lines make one inch) \$2.10 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word, net. Cash must accompany the order. Minimum charge 50 cents.

Advertisements must be received not later than the 10th and 20th of each month to insure insertion in the subsequent issue.

Wanted-Lumber

Maple Axles Wanted

Let us know what you have.

JACKSON WAGON CO., LIMITED,

3-4 St. George, Ont.

White Pine Wanted

Always in the market for good White Pine. Please write us.

1-t.f. The Fisher & Wilson Company, Cleveland, O.

Wanted

Pine, Basswood and Spruce Bolts, 18 inches long.

REID BROS.,

3-3 Bothwell, Ontario.

Basswood Wanted

No. 2 Common and Mill Cull. Winter cut preferred. Apply Firstbrook Brothers, Ltd., Toronto, Ont. 8-t.f.

Basswood Wanted

1 car of 4 in. x 5 in. Common Basswood Squares, 8/16 ft. long. Hearts stock no objection.

3-4 D. AITCHISON & COMPANY, Hamilton, Ontario.

Wanted

WE REQUIRE SEVERAL MILLION FT. of Elm, Basswood, Maple and Beech, to be sawn to our order. Spot cash settlements and assistance given if necessary. Box 672, Canada Lumberman, Toronto. 3-3

Hardwood Logs Wanted

Rock Elm, Maple, White Ash, Shellbark Hickory, Soft Elm and White Beech, in car lots. Cut 10 ft., 12 ft. and 14 ft. long. Highest market price paid. Address,

2-3 St. Marys Wood Specialty Co., Limited, St. Marys, Ont.

For Sale-Lumber

Cedar Posts For Sale

15 Cars 4 1/2 in. and up peeled Cedar posts. F. McGIBBON & SONS, Sarnia, Ontario. 3-6

Three to five cars Selected White Pine Trimmer Ends.

John B. Smith & Sons, Ltd.

Toronto

Lumber For Sale

Two cars 4 x 4 Maple Boxed Hearts. One car 5 x 5 Maple Boxed Hearts. One car 6 x 6 Maple Boxed Hearts. Seven cars Fir Doors. Three cars Fir Columns.

GEO. C. GOODFELLOW,

Montreal, Que.

For Sale-Machinery

For Sale

Very fine 18 in. and 32 in. x 42 in. Cross Compound "Brown" Engine, approximately 400 h.p., built by Polson Iron Works. Has 44 in. x 16 ft. Belt Pulley. Splendid condition. Immediate delivery. Box 654, Canada Lumberman, Toronto. 24-t.f.

Machinery For Sale

75 h.p. also 100 h.p. engine, heavy log jack and chain, Hamilton 3 block carriage, saw frame, 4 saw trimmer, Berlin No. 94 Planer, 12-in. 4 side Sticker, 30-in. bracket saw, shaper, automatic saw sharpener, Murray lath bolter, Rogers lath machine. Good condition.

VIGARS-SHEAR LUMBER CO.,

Port Arthur, Ont.

Machinery For Sale

Light Planer, Matcher and Moulder. Variety Trim Saw. Power Feed Rip Saw. 36 in. Band Saw. 12 in. Heavy Moulder. 12 in. Jointer. Three Drum Sander. Other Woodworking Machinery.

A. J. LINDSAY,

90 Pembroke Street,

Toronto, Ont.

For Sale

One tandem compound Goldie & McCulloch steam engine, 135 h.p. rating.

One Laurie Engine Co. 13 x 30 Corliss engine.

The above engines are in A1 condition.

We have also a large amount of 4, 6 and 7 in. wrought iron steam and exhaust pipes, complete with valves and fittings. The price F.O.B. cars will be quoted to those interested.

Apply H. M. Miller, Water, Light & Heat Commissioner, St. Marys, Ontario. 3-6

Wanted-Employment

Advertisements under this heading one cent a word per insertion. Box No. 10 cents extra. Minimum charge 25 cents

CAPABLE, RELIABLE MILL FOREMAN wants position. Good references. Box 663, Canada Lumberman, Toronto, Ont. 2-4

MARRIED MAN, 38 years of age, with 12 years' experience in logging office of large lumber firm, desires change. Available in July next. Best of recommendations. Box 665, Canada Lumberman, Toronto. 2-4

POSITION WANTED AS OFFICE MANAGER or Accountant with lumber and wood-working business, 15 years with one large Ontario concern; 5 years as treasurer and office manager. Practical knowledge in all departments of business. Aggressive and up-to-date methods, best credentials. At present engaged but desire opportunity with large concern where advancement is assured as reward for ability and services. Apply Box 673, Canada Lumberman, Toronto. 3-4

POSITION WANTED by a young married man 33 years of age of good appearance and address. Fifteen years' experience as an inspector. Will consider any capacity. Apply Box 667, Canada Lumberman, Toronto. 3-5

EXPERIENCED LUMBERMAN, married, wants position as manager. Still employed. Superintended lumber cut, estimate and shipment. Reason for change, company not doing further business. Reference given. Box 662, Canada Lumberman, Toronto, Ont. 2-7

Experienced Lumberman

Open March 1st for position by experienced lumberman in wholesale hard and soft woods, both native and foreign. Thorough knowledge of the business in both buying and selling end. Highest reference given. Apply Box 7, No. 4 Oldfield Ave., Montreal. 3-3

Wanted-Employees

Advertisements under this heading two cents a word per insertion. Minimum charge 50 cents.

YARD MAN WANTED immediately for wholesale and retail lumber yard. Must be familiar with scaling, culling, handling men and teams, loading and unloading cars, and have knowledge of how to get orders out of timber to the best advantage. Apply to

The Fletcher Pulp & Lumber Co., Ltd.,

3-4 Sherbrooke, Que.

Business Chances

Jobbers Wanted

We wish to let several contracts to take out logs on Berth No. 6, being broken front lying between the Magnetawan and French Rivers. This berth is all convenient to Canadian Northern Railway.

John Harrison & Sons Company, Limited,

Saw and Planing Mills,

9-t.f. Owen Sound, Ont.

Western Canada

HAVE YOU A PRODUCT TO SELL through the lumber dealers of Western Canada? We can represent you, as we are selling only lumber lines and are in direct touch with all dealers in Manitoba, Saskatchewan and Alberta. Now is the time to line up for 1918 business. Box 658, Canada Lumberman, Toronto, Ont. 2-3

Tide-Water Stumpage

For Sale or Exchange

For sale, or will exchange for good ranch or farm land, B. C. Tide-water stumpage, cruised and surveyed.

CARL BLOCK,

19-t.f. Peoria, Illinois.

Mill Plant and Limits For Sale

43 Miles Limits on 31 Mile Lake, Gatineau Valley, containing Basswood, Spruce, Fir, Pine, Cedar, Birch, Maple and Pulpwood.

New Waterous 8 ft. Improved Double Cut Band Mill complete. Steam Alligator, Boats, Sleighs, Wagons, Harness, etc. For further particulars apply to

A. W. STEVENSON,

8-t.f. P. O. Box 2624, Montreal, Que.

For Sale

Sawmill, camps and equipment. Logs on lake for this summer cut. Will take lumber as part payment. Good opportunity. Apply Box 671, Canada Lumberman, Toronto. 3-3

Tenders Wanted

on about 1,200 cords of dry 4 ft. spruce slabs and edgings, at a mill located on a 4c rate from Montreal. Apply Box 674, Canada Lumberman, Toronto. 3-3

FOR SALE

as a Going Concern
Saw Mill and One Hundred
Square Miles Crown
Lands

Mill capable of sawing eight million superficial feet per year. New boilers, good engine and pumps, gang and rotary shingle and lath machines and planer. Railway siding in yard, also water shipping.

This property is situated in a thriving centre where labor is available. Good general store, boarding house and other buildings in connection with property. Good reasons given for selling.

No one need apply except bona fide purchasers.

Apply, Lumber, Box 643, Canada Lumberman and Woodworker, Toronto, Ont. 22-t.f.

"Business Chances"

Fine new mill-constructed concrete wood-shop with modern equipment. Open to bid on standard or special wood products in quantities for the woodenware trade. Send blue prints, specification or models for quotations.

James Smart Mfg. Company, Limited, Brockville, Ont. 2-5

Will Wood Fuel Take the Place of Coal?

During the current season, the unfortunate dependence of Canada on the United States for its supply of coal has been brought into vivid prominence and, as a result, there has been much searching for possible substitutes. Naturally, wood was one of the substitutes to attract attention. The fuel value of good hardwood compares unfavorably with anthracite coal, a pound of such coal being equal to approximately two pounds of hardwood. For this reason, in markets that are far removed from sources of supply, wood is more expensive than anthracite, so long as the prices and available supplies remain as now.

The southern portions of Manitoba, Saskatchewan and Alberta

have no large supplies of wood. Up to a few years ago, wood, cut locally, was used to some extent, but, with the gradual exhaustion of these supplies, the demand for coal is increasing yearly. The cordwood used in the prairie provinces comes from the Rainy River district of Ontario, south-eastern Manitoba, the western shores of lakes Winnipeg and Manitoba, the Riding Mountains, the vicinity of Prince Albert, the Kootenay district of British Columbia and Minnesota.

These sources of supply are at a considerable distance from the centres of population, and, as cordwood is bulky, the long freight haul to market largely increases the price. Even in certain of the areas mentioned, supplies of cordwood are becoming exhausted, and it is evident that, under present conditions of transportation, there is no likelihood of its being used to any greater extent than at present.

Large Warehouses Being Constructed in Chicago

Three monster warehouses for the United States Government are now under construction in Chicago and will be rushed to completion rapidly. They are located in the Central Manufacturing District and will extend along West Thirty-ninth Street from Ashland to Wood Street. Each building will be 1,325 feet long and 96 feet wide, and the cost is placed at \$500,000. The buildings will be one storey high, the side walls will be of tile construction, the posts and girders will be wooden construction, while there will be joist constructed roofs. In every 176 feet of length of the building there will be a fire wall. It is believed the buildings will be ready for occupancy within six weeks. Capt. A. H. McComb, who had charge of construction at Camp Custer, Battle Creek, Mich., is in charge of the work; the contract for building the three warehouses is had by the Central Manufacturing District. Perhaps no other place in Chicago is so well served by connecting railroad lines and for that reason the site was selected. The buildings will be sprinklered.

Wood Alcohol an Important Product in War

An announcement came from Washington recently that the country's supply of wood alcohol has been taken over by the National Government. The importance of this announcement to the lumber industry will promptly be recognized, and it will undoubtedly be a very material stimulus to the wood chemical industry—a very practical form of conservation of mill and forest waste, although in this connection applying chiefly to hardwoods. Wood alcohol is a product hav-

ing a number of important industrial uses, but its greatest importance at the present time rest upon its use in the manufacture of explosives.

It will, of course, be possible very largely to increase the manufacture of wood alcohol in this country if labor and plant equipment are obtainable, and if the established price for it is sufficiently attractive to compete with demands for human effort in other industrial lines.—American Lumberman.

Reforestation in Quebec

Reforestation of denuded lands in Quebec continues to make progress, though on a small scale. The provincial forest nursery at Berthierville is to be materially extended. The reforestation work of the Laurentide Company is particularly notable. Planting also has been done by the Riorden Co. and the Pejepscot Co.

So far, practically all of the forest planting has been done on privately-owned lands, but the provincial government has now under consideration the question of systematic reforestation of denuded Crown lands. Obviously, the question is one of the highest possible importance.—"Conservation."

Review of Current Trade Conditions

Ontario

The chief feature in the Ontario lumber trade is the difficulty of transportation. There has been a continual shortage of cars and now the severe weather of the past couple of weeks has brought about a tie-up of shipments. A Toronto wholesaler states that the Grand Trunk Railway recently placed an embargo against all connections at North Bay. Another rumor that is going around is to the effect that the railways are considering placing embargoes on all but strictly war orders. Apart from the transportation feature there is a good volume of business offering for this time of year and prices are well maintained. Consignees are suffering a loss owing to delays in delivery. The increasing value of the material and the carrying charges on lumber that cannot be shipped make a serious item and the trade all round is losing on this account.

As an instance of the increasing cost of doing business in the lumber trade a wholesaler reports that the railways are now charging for their tariffs. These were formerly given free of charge to shippers. This wholesaler is making shipments to the east and west and also to the United States, and is obliged to have nearly all tariffs put out by the different railways. He estimates that these will now cost him in the neighborhood of \$25. It is not a very large item, but still it is one of many such items that are constantly being added to the cost of doing business.

The latest reports from Ottawa indicate that there are prospects for a good year's business in sight, taking present enquiries and orders as a criterion. A slight lull occurred during the first part of January, but a very noticeable revival was apparent during the last ten days. Prices are firm and are showing an upward tendency, this being chiefly noticeable with grades of spruce and pine. Quotations from wholesalers show an increase of \$2 and upwards per thousand on dressed stock. Retail prices for dressed clapboard and scantling advanced from \$3 to \$5 per thousand. There is a strong belief on the part of the trade that prices will advance again before the summer months. Stocks are low and dry stock is in good demand. In the Ottawa district, as elsewhere, the car situation has interfered greatly with shipments and is at present the principal concern of the lumbermen. An estimate made to the Canada Lumberman states that between 2,500 and 3,000 carloads of lumber were being held up in the Ottawa Valley. There has been an increase in the number of embargoes to United States destinations. These embargoes are being continually lifted and applied, thus causing considerable trouble.

New contracts for about 300,000 shell boxes have been let by the Imperial Munitions Board. The price has not been announced by the Board, but is understood to have been in the neighborhood of 75c per box for boxes that were made six months ago at 86c. The cut in the Ottawa Valley is expected to be considerably below that of the 1916-1917 season. The labor situation has shown a slight improvement lately, in some instances, while in other cases it has remained unchanged.

Eastern Canada

The very severe weather which has been experienced in Canada during the past couple of weeks has greatly disorganized the transportation systems, thus interfering to a great extent with the movement of cars of lumber. In some instances cars have been on their way for several weeks, and even now there is not much prospect of their speedy arrival in view of the congested condition of some of the railroads. In the Montreal district wholesalers who have been doing business with the United States have been particularly affected by the tie-up in transportation facilities. Orders from the States are fairly plentiful, but in Montreal the local trade is almost at a standstill. A few transactions are reported for shell box lumber, but this business has not been particularly active during the past few weeks. This may be due to some extent to the fact that the first of the year is the favorite time for stocktaking with the woodworking plants, and manufacturers generally. The Imperial Munitions Board have given out some orders for shell boxes recently, but prices are said to be low. Dimension timber is not in much demand owing to the inactivity in the building situation. From the northern producing sections of Quebec province, the reports are to the effect that the cut will be even smaller than was anticipated. The chief factor in this situation is the difficulty in securing labor.

The question of future prices is the most important subject of conversation in the lumber trade. According to wholesalers, a considerable stiffening in values is inevitable. Manufacturers who have been interviewed regarding this year's cut are not inclined to say

much about prices. They are apparently adopting the policy of waiting until the season is further advanced. The general position of the lumber trade is uncertain, but there is no doubt that prices will be increased. To some extent, opinions vary, but most of the producers are agreed that the cost of logging and manufacturing will be considerably more than heretofore.

The amount of spruce being shipped to British and French ports is very small, but a great deal of stock has been purchased during the past week in the St. John territory, by agents of the United States Government. This is expected to be shipped at once, as there are no restrictions or embargoes that will affect the movement of stocks for war purposes. It is said that if the United States Government continues buying, there will be very little stock of any kind left at St. John. The British Admiralty has been purchasing considerable stock which is now being moved out by rail to United States points.

Spruce boards have practically disappeared from the market and nearly all the boards that are to be found are being resawn from deals. As the deals are very high in price and the cost of resawing has to be added, the price of spruce boards is away up. No sales of English deals for 1918 sawing have yet been made. Manufacturers appear to be waiting to find out definitely what their costs of production will be before accepting offers for deals. The cost of producing logs is expected to be considerably higher than was anticipated last fall, as in many cases it is taking two men to do the work previously done by one. Logs which cost \$21 to \$22 a year ago are expected to cost this year from \$25 to \$37. A considerable shortage of material is looked for at St. John for the coming year. The prices on pine are very firm and practically all pine stocks at St. John have been purchased for early delivery. There are very few laths left at the wharf and shingles are also pretty well cleaned up, outside shingles being brought in for local consumption.

In the Eastern States, prices are well maintained and stocks are scarce. A great deal of difficulty is still being experienced in regard to transportation facilities and the outlook for the future is practically based on this factor. At Boston prices are firm and while no recent notable advance is apparent, there is every indication that prices will advance.

United States

General business in the United States is irregular, although it is commencing to revive again after the holidays. The very unfavorable weather which has prevailed during recent weeks and the pronounced shortage of coal have interfered to some extent with the carrying on of business generally. Deliveries in particular have been interfered with, and the transportation facilities are not creating any enthusiasm in the lumber trade. There may be some improvement now that the government has taken over the railways, but the lumber firms have not been able to come to any definite conclusion in this regard.

Another factor that is said to be responsible for the present unsettled condition in the lumber trade is that many woodworking establishments throughout the country are being converted into ammunition factories, the owners of these plants probably thinking that there is a chance of the woodworking industry being classed as a non-essential industry.

Sales of southern pine are showing a considerable increase, although it is said that they are not as heavy as might be expected at this season of the year. The chief difficulty here is the severe winter weather, the inability to get cars to make shipments, the smallness of unsold stocks in manufacturers' hands and the lack of fuel at many of the lumber consuming plants.

The car situation is spotty. In some districts west of the Mississippi, for example, a better supply of cars is available than was to be had a month ago. Apart from the hardwoods consumed by the factories engaged in the manufacture of war supplies, there is not a great deal of activity. There is some buying by the furniture makers and some other lines, but this business is not up to normal. This is no doubt due to the fact that January and February are usually about the slackest months on the furniture manufacturers' calendar. This has been responsible for some orders being placed with manufacturers, but here as elsewhere broken stocks at the mills and the inability to get cars to make shipments have interfered seriously with the business.

Weather conditions have been particularly severe in the southern producing territory and have interfered to a large extent with manufacturers' operations. The Mississippi River and its tributaries are

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

"Rush Orders Rushed"

closed to transportation and are likely to be so for some time. The production of logs has been somewhat greater than usual, but cars in which to move them are not forthcoming. There is said to be a good deal of concern in regard to what the conditions will be this spring in the white pine market. White pine is about one of the scarcest items on the lumber list. Eastern stocks are very badly broken and the winter cut has been exceptionally small. White pine is used for so many purposes where it is considered the only suitable material, that great concern is felt in regard to its scarcity. Special efforts are being made to increase the production of logs. These efforts are meeting with a certain amount of success, because farmers and small operators are cutting in isolated tracts where it would not be possible to conduct logging operations on a large scale.

At North Tonawanda, an increasing demand for better grades is reported by wholesalers, and stocks are being depleted to such an extent that very little hope is held out of wholesalers being able to meet the requirements of the trade until new stocks are obtainable. Great inroads are being made into the upper grades by the requirements of the government. The government is also taking large quantities of the poorer items. Customers are endeavoring to place orders for spring requirements and these are showing rather large proportions. Retailers are helping each other out to some extent by furnishing stocks to fill out shipments, but a number of orders are going unfilled owing to the inability of the yards to supply the stock, and this in spite of the fact that prospective buyers are willing to pay very liberal prices.

Great Britain

There is very little prospect of the export situation being improved until the end of the war. The British Timber Controller in a recent address stated that he hoped to see a production in 1918 of English home-grown wood totalling 600,000 standards of sawn goods, or about double the quantity produced in 1917. He also looks forward to a production of 3,500,000 tons of pitwood for mining purposes. These plans for an increased production in England indicate that the very apparent shortage of timber stocks in that country will be replenished as far as possible by home production instead of looking for relief from the import situation. There is some doubt as to whether it will be possible to increase the home production in accordance with the Timber Controller's requirements, owing to the labor shortage.

The stocks of spruce available in Great Britain are very small. In fact they are reported to be lower than at any time during the year just past. The question of tonnage has undoubtedly been mainly responsible for this situation. Cargo space is scarce, but in view of the fact that spruce enters so largely into airplane construction, the import restrictions might be relaxed to some extent.

At Liverpool business has not yet been resumed to any great extent since the holiday break. A lack of vigor is said to be the feature most in evidence. An inventory of the stocks of wood goods recently shows a quantity of British Columbia and Oregon pine stocks of 42,000 cubic feet. This quantity is considered to be fairly satisfactory, and compares favorably with the volume on hand at the close of 1915 and 1916. The stocks of sawn pitch pine show an entirely different situation. The inventory taken on December 31st shows 129,000 cubic feet as against 673,000 cubic feet in 1916, and 399,000 cubic feet for 1915. The discrepancy between pitch pine boards held this year and in December, 1915 and 1916 is shown to be even greater. The quantity for the present year is 39,000 cubic feet, while for the two years preceding the stocks were 302,000 cubic feet and 393,000 cubic feet respectively. A comparison of the stock of birch logs and planks shows that they are similarly low in comparison with the two previous years. The number of spruce standards on hand at the date of the inventory was 5,980, as compared with 15,770 for December, 1916.

At Manchester, the timber trade has been rather slow in resuming business after the holidays. This slowness is said to be due to some extent to the lack of hope on the part of the trade for any improvement in business conditions for 1918. The outlook is problematical and so many outside factors have to be considered that no increase in trade is looked for. Apart from the uncertain future, the trade at Manchester is in a fairly healthy condition. The demand is taxing supplies and importers are making strong efforts to replenish their stocks.

One favorable feature noticed in regard to the British import trade is the tendency to increase the freight space available for imported hardwoods. Recently a number of carloads of American oak and poplar have reached the Liverpool market. These imports, however, have only been a drop in the bucket, in view of the situation existing in this market.

Market Correspondence

**SPECIAL REPORTS
ON CONDITIONS AT
HOME AND ABROAD**

Ottawa Trade Showing Brisk Improvement

Ottawa, January 25; (Special to the Canada Lumberman):—Indications of a good year's business presented themselves in the form of enquiries and orders in the Ottawa lumber market during the closing period of January. The lull which occurred during the first part of the month vanished almost completely during the last ten days. Inquiries and orders increased as compared with the first two weeks of the year and were more numerous than during a corresponding period in 1917.

The market remained firm. Prices generally showed an upward tendency. The increases in the manufacturers' prices dealt chiefly with grades of spruce and pine. Wholesalers advanced their quotations on dressed stock two dollars and upwards per thousand. With the retailers dressed stock, clapboard and scantling advanced from three to five dollars per thousand. It is generally believed by the trade that prices will advance again before the summer months. The market is not overstocked. Dry stock especially is in good demand. Nearly all of the cut in the manufacturers' yards has been sold. In some cases it has not been removed owing to transportation difficulties.

The principal demand was for export. The demand for grades suitable for building purposes was light. The sash and door trade did not show much activity.

The car situation became acute and, with the various embargoes on shipments to American points, was the chief concern of the lumbermen. On an estimate given the Canada Lumberman it was stated that between two thousand five hundred and three thousand carloads of lumber were being held up in the Ottawa Valley owing to transportation difficulties. Allowing 17,000 feet to the car this estimate means that between 42,500,000 feet to 51,000,000 feet is being delayed in shipment. W. C. Edwards & Company have 800 carloads on order to ship from Rockland, but cannot get cars. The majority of the delayed stock is for export orders.

An increase in the number of embargoes to American destinations

was felt by the trade. The embargoes are constantly being lifted and applied and have caused the local trade much trouble and worry. The woods labor situation improved with some of the mills, and with others remained unchanged or unsatisfactory. The 1917-18 cut of the Ottawa Valley, it is believed by some lumbermen, will be below that of the 1916-17 season.

Fresh contracts for approximately 300,000 shell boxes have been let by the Imperial Munitions Board. The price, which was not announced by the Board, is understood to have been close in the neighborhood of seventy-five cents per box. Six months ago, at Ottawa, similar boxes were made at eighty-six cents. One Ottawa plant secured a contract.

Gilmour and Company report the market firm and prospects for business good, if cars can be secured. A stiff advance in price is expected before spring. Orders and inquiries continue good. The embargoes as well as the car shortage are causing inconvenience to this company.

Mr. Jackson C. Booth reports that this season's cut of John R. Booth will not be as large as last season's. The shortage of woods labor is stated to be one of the chief causes. Bush operations showed some improvement during January. Shortage of cars and the indefinite date of embargoes at American points are delaying many shipments from the Booth yards. The restrictions on export shipments to Great Britain are causing congestion in stocks sawn for the English market.

The Hawkesbury Lumber Company reports that its cut will be about twenty-five per cent. below that of last year. Their woods situation is now satisfactory. The shipments of this company are also hampered by shortage of cars and embargoes. Mr. R. G. Blackburn states that there is sufficient lumber to meet demands if cars could be secured to move it. Whether the present year will be a satisfactory one to lumbermen in the Ottawa Valley depends on transportation and labor, he says.

Shepard and Morse report a decrease of about thirty per cent. in

Cuts Milk Costs—Reduces the Waste

Klim is the solids—the body building food value—of fresh, pasteurized, separated milk, in powder form. It is packed in handy 10 pound tins. Bults small, saves 75 per cent. in freight charges. Ten pounds makes 40 quarts of liquid with the natural fresh milk taste. Klim keeps indefinitely. Can be used from the tin as needed. Will not freeze nor turn sour. It is cheaper than any other form of milk. Can be mixed dry with flour, sugar, coffee, etc., in cooking, or dissolved in water for use as liquid.

this season's cut as compared with last season's. The woods labor situation has been unsatisfactory with this company. Mr. P. C. Walker reports that shortage of cars and embargoes are increasing other difficulties. Orders and inquiries increased as compared with the opening period of the month. Mr. Walker further says he can see no reason for or indications of the market weakening.

W. C. Edwards & Company have secured a contract for 50,000 4.5 inch shell boxes. The order will take about three months to complete. Woods operations are reported as proceeding as well as could be expected. The car situation is bad and the company report that they have not been able to get cars for shipment to the United States for two weeks.

The McAuliffe, Davis Lumber Company report local trade quiet and trouble through car shortage and embargoes.

The Estate James Davidson has eight gangs working in the woods. The deep snow is making operations difficult. The cut this year will be reduced by twenty-five per cent. as compared with the 1916-17 cut. Good progress is being made by this company on its 128,000 shell box order.

Montreal Markets—Transportation the Chief Problem

Montreal, January 24; (Special to the Canada Lumberman):—The car situation is the dominant feature of the Montreal market. Heavy storms and railway disorganization have prevented the moving of lumber to any extent, wholesalers who are doing business with the United States being especially hard hit. Some cars have been on their way several weeks, and even now there is little prospect of their speedy arrival, having regard to the extraordinarily congested condition of the roads.

Orders from the United States are coming in very well, considering the conditions, but local trade is almost at a standstill, except for a few transactions in shell box lumber. Two or three additional orders for boxes have been given out by the Imperial Munitions Board. The price is stated to be low, taking into account the advance in lumber.

Dimension timber is in little better request.

Reports from the northern part of the province are to the effect that the cut will be smaller than was anticipated. Labor is very hard to get, and commands good wages.

The talk is still as to the future prices. Judging from conversa-

tions with wholesalers, an appreciable stiffening in values, even over the recent advances, is inevitable. Certain manufacturers who have been approached as to the new cut are disinclined to say anything as to prices, and are apparently adopting a "wait and see" policy as to the output. The general position is quite uncertain—lumber will be dearer, but to what extent, there is a diversity of opinion, although most are agreed that the extra cost of logging and manufacturing will be high.

The demand for sulphite pulp is fair, but prices are inclined to be lower. There has been a substantial reduction from the quotations obtained in the days of the boom. Plenty of ground wood is available. Newsprint is again a firm market, with plenty of buyers.

St. John Markets—U. S. Making Large Purchases

St. John, N.B., January 23; (Special to the Canada Lumberman):—While no great amount of spruce is moving by liners and transport for British or French ports, considerable stock has been purchased during the past week by agents of the United States Government. This will be moved at once by cars, as no restrictions or embargoes affect the movement of stocks for war works. Should the United States Government keep on buying, very little stock of any kind will be left at St. John, as what has not already been purchased by the Admiralty is moving out very quickly by rail to United States points. Spruce boards are a thing of the past, really all the boards to be found are what are being resawn from deals, and as the deals are very expensive to begin with, when one adds the cost of resawing, a very high priced board is the result. Ordinary number 3 boards, planed one side are bringing \$30 per thousand, and matched \$35, with anticipated advance in the very near future.

No sales of English deals to be sawn by the mills in 1918 have yet been made, in fact the manufacturer is in no way keen to offer any sawn material until he has a positive knowledge of his stock of logs and their cost. If the present outlook holds good all through the winter season a very short crop of logs will be the result, besides a much higher cost per thousand than was ever anticipated last fall, when men went into the woods in this section of the country. It is really taking two men to do the work done previously by one. Even at the extremely high rates of pay the men refuse to work steadily and are wandering from one camp to another. This causes a very material shortage in log production, which, it goes without saying,

The Ideal Edger for Light Mills

Specifications

Our new Double Edger is built on entirely new lines, and possesses many features that commend it to mill men. The saving in material alone will soon pay for the machine. The output of a mill with this machine can be increased by one-third. It is best adapted for medium-sized or portable mills that cut from 5,000 to 25,000 feet of lumber per day.

SAWS.—This Edger is fitted with either two or three saws as required. The saws are 16 in. in diameter, and 10 in. gauge. The greatest distance between saws is:—Two saw machine, 24 in.; three saw machine, 20 in., the least distance between saws, 2 in.

DRIVE PULLEY.—The Drive Pulley is 9 in. x 9 in., affording a good belt grip, and is supported by an outside bearing.

SAW ARBOR.—The Saw Arbor is made of 2½ in. steel, and has very wide bearings.

will add very much to the cost of the logs. Logs which a year ago cost \$21 to \$22 per thousand will this year cost \$25 to \$27 per thousand, and not nearly so many will be produced as a year ago. Should there be any demand whatsoever during the coming year, the eastern mills will certainly be short of material. At St. John the grade of logs, so far as size is concerned, will not be nearly as large as usual. This will result in stocks of smaller sizes rather than the wider widths. Just where the manufacturer is going to fit in during the coming year is as yet a conundrum. The past year has been a good one, but it certainly does not look very promising for 1918. A year ago, logs were much cheaper and prices advanced quickly, while this year logs will be higher, and it is felt that prices in the United States certainly cannot go very much higher, unless something unforeseen arises. Transportation is the great trouble. If this problem were solved the situation would change. England and France are very short of stocks, but with tonnage conditions in their present state very little outlet can be looked for in that direction. When spring comes, mills at St. John will be cleaned out ready to pile up again. In other sections of New Brunswick not a stick is moving, as no cars can be had for interior points, and ships are not available.

Prices for all wood goods remain firm. Pine prices are extremely firm and about all pine stocks here have been purchased for prompt delivery.

Laths are about all cleaned from wharves. Shingles are also cleaned out entirely, and only outside shingles are being brought in for local consumption. It looks at present as if cedar shingles would be very scarce at St. John during the coming season, as a shortage in cedar logs is bound to take place. All stocks of refuse lumber have been cleaned up and it is hard to find enough to go around for local trade.

Local trade so far has been much better than during the winter of a year ago, even though the weather has been extremely cold and rough.

The Kiln Drying of Spruce

The director of the United States Bureau of Standards in making his annual report recently to the secretary of commerce has the following to say in connection with the investigation made to the effect of kiln drying spruce:

"The scarcity of good air-dried spruce for the purpose of airplane manufacture has led to an investigation of the effect of kiln drying on spruce lumber. It is hoped that this investigation will result in a suitable method for kiln drying spruce which will give a material as satisfactory for use in airplane construction as the present air-dried spruce. This work has been outlined and is now in progress. The results, when obtained, will be communicated to the Aircraft Board of the government for their immediate use." Taking up the airplane strut investigation the report continues:

"A tentative outline of the investigation of airplane struts was submitted to the various airplane manufacturers for criticism and suggestions before this work was begun. The suggestions made are incorporated into the final programme insofar as this was possible.

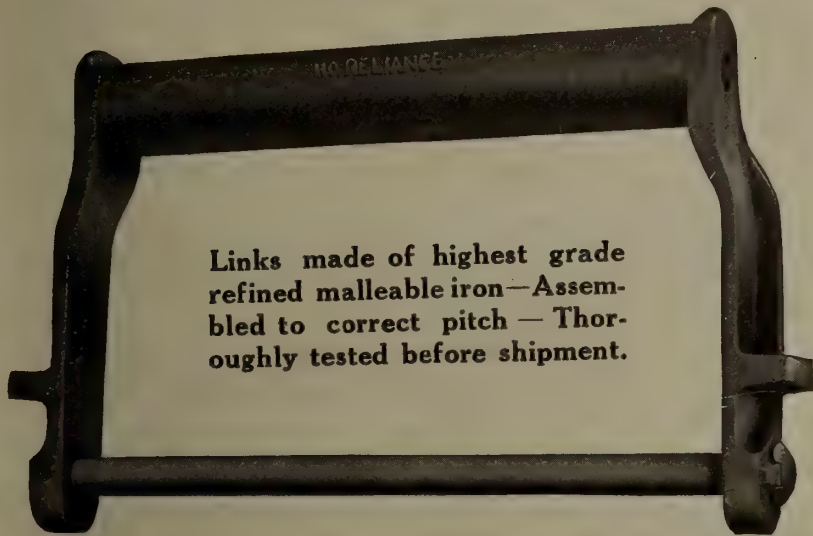

"Work is now under way on an investigation to determine a suitable column formula for use in design of airplane struts. This investigation is being conducted upon air-dried spruce and comprises lengths of log run from 25 to 250. It is the intention to determine from this investigation an empirical formula to be used as a guide in the design of airplane struts, no formula at present being available for this work." Taking up the question of the resistance of wood to alternating stress the report says:

"Investigation on the resistance of various kinds of wood to alternating stress was undertaken some time ago. A few preliminary experiments were conducted on a machine now in the possession of the bureau, but this machine was found to be wholly unsatisfactory for the work. The results obtained, however, were indicative of the necessity of such an investigation and a machine was designed and has been built in the shops of the bureau. The investigation is now under way. A sufficient number of tests have not yet been made to warrant the drawing of any conclusions. A battery of these machines is now being built so that the results may become immediately available for use at the present time. These results will be communicated to the proper board, when available, for their guidance in the selection of material for aircraft production."

Mr. H. M. Fullerton, secretary-treasurer of the New Westminster Construction and Engineering Company, New Westminster, B.C., is of the opinion that shipbuilding has now become one of the established industries of the country and will continue to flourish after the war. He states that shipbuilding is not dependent on war conditions and is capable of developing and becoming an important factor in the industrial life of the country on its own merits.

JEFFREY "RELIANCE" MALLEABLE DRAG CHAIN

HAS THESE SPECIAL FEATURES THAT INSURE A MAXIMUM OF SERVICE

Links made of highest grade refined malleable iron—Assembled to correct pitch—Thoroughly tested before shipment.

Jeffrey "Reliance" and other types of Chains are a recognized standard for handling Saw Dust, Refuse, Logs, Lumber and other materials in Saw Mills and Wood-Working Plants.

EDGINGS

Ontario

The new plant of the Port Arthur Pulp and Paper Company, at Port Arthur, Ont., with a capacity of fifty tons of pulp daily, has commenced operations.

The firm of Edward Clark & Son, Stair Building, Toronto, have obtained incorporation under the new name of Edward Clark & Sons, Limited, at the same address.

O. & W. R. Smith, 12 Drayton Ave., Toronto, Ont., have started work on the erection of a planing mill to cost \$2,500. The owners will supply the lumber and supervise the work.

Holinshead and Rogers, who have been operating a sawmill on the shore of Peninsula Lake, have sold their property to Mr. Geo. Tennant, of Bracebridge, Ont. Mr. Tennant's interests will be managed by Mr. J. G. Golden. Mr. Tennant will continue cutting the hardwood at the Peninsula Lake mill, but the softwood will be driven down the Muskoka River to Bracebridge, where he has a mill in operation.

Eastern Canada

G. M. Cochrane, Port Greville, N. S., has commenced the construction of an 850-ton four-masted schooner.

W. R. Huntley & Son, Parrsboro, N. S., have commenced the construction of an 850-ton four-masted schooner.

Foley Bros., Hantsport, N. S., have commenced work on the construction of three four-masted schooners, each 900 tons.

Chabot & Freres, sawmill owners, St. Madeleine, P.Q., have been registered. Those interested are C. Chabot and F. Chabot.

J. E. Gaskele, Meteghan, N. S., is in the market for a quantity of hardwood, spruce, Douglas fir, pine, etc., for his shipbuilding operations at that point.

The Southern Salvage Company, Brooklyn, Queens County, N. S., have commenced the construction of a 3,000 ton steamer for the Imperial Munitions Board.

Dr. T. H. McDonald, Meteghan, N. S., is in the market for a quantity of hardwood, spruce, Douglas fir, etc., in connection with his shipbuilding operations at that point.

The Clare Shipbuilding Company, Meteghan River, N. S., are in the market for a quantity of spruce, pine, hardware, Douglas fir, etc., for the construction of a schooner which will cost \$50,000.

W. D. Piercey, Sunnyside, Halifax, N.S., has purchased an old cotton factory recently destroyed and contemplates the erection of a woodworking plant. He expects to start operations early in the spring.

A large shipbuilding yard for the construction of wooden vessels for coast service has been started at Rexton, Kent County, N.B., and already the work of shipbuilding has begun. When in operation from 100 to 150 men will be employed.

The Comeau Shipbuilding Company, Limited, Comeauville, N. S., have started work upon the erection of a shipbuilding plant at a cost of \$50,000. They are in the market for a quantity of spruce, Douglas fir, hardwood, etc. The officers of the company are: President, Edward L. Comeau; Secretary, J. W. Comeau; master builder, L. Melanson.

The Brompton Pulp and Paper Company, East Angus, P.Q., has acquired the Claremont Paper Company, Claremont, New Hampshire, and Wyman, Flint and Company, Bellows Falls, Vermont. These are old customers of the Brompton Company, the former having an output of fifty tons of kraft paper per day, and the latter an output of twenty tons of specialties per day.

The Saulnierville Shipbuilding Company, Limited, has commenced work upon the erection of a shipbuilding plant at Saulnierville, N. S., and are in the market for a quantity of spruce, pine, Douglas fir, hardwood, etc. The president of the company is Mr. F. E. Comeau, the manager is Mr. F. P. Comeau, and the secretary-treasurer, Mr. Denis D'Entremont, Meteghan River.

Price Bros. & Company, Limited, 56 St. Peter Street, Quebec, P.Q., are contemplating the erection of a pulp and paper mill at Ste. Genevieve de Batiscan, P.Q., to cost approximately \$30,000. Mr. Boyce is in charge of the Batiscan branch. The company has sent engineers to look for a site on the River Batiscan, near St. Narcisse with a view to establishing a grinding and pulp mill there.

Western Canada

The Manning-Sutherland Lumber Company, Limited, will open a lumber yard at Red Deer, Alta.

A recent press despatch states that an order has been issued for winding up of the Arrow Lakes Lumber Company of Vancouver, B.C.

The Small-Bucklin Lumber Company's sawmill at New Westminster, B.C.,

has resumed operations and will run on two shifts, night and day. The company expect to cut 50,000,000 feet of lumber this year.

The Fraser River Shipbuilding Company has been organized at New Westminster to construct all classes of ships, wood, steel and concrete. The site of the proposed shipyard is centrally located on the Fraser River.

A five-masted auxiliary schooner built by the Cameron-Genoa Mills Shipbuilders, Limited, was recently loaded with 1,500,000 feet of lumber at the Canadian Western Lumber Company's wharf at Fraser Mills, B. C., for Melbourne, Australia.

The Service Lumber Company, Limited, has been incorporated with head office at Vancouver, B.C., and capital stock of \$10,000, to carry on business as sawmill, planing mill and shingle mill proprietors and to manufacture and deal in timber, lumber, logs, lath, sash, doors, etc.

The A. Fraser Company, Vancouver, B.C., have purchased a tract of timber on Hayden Island, estimated to contain 17,000,000 feet, from L. A. Matthews, receiver of the Canadian Pacific Lumber Company. The purchasers contemplate logging the timber immediately.

The Graham Island Spruce & Cedar Company, Limited, Prince Rupert, B. C., report that the plant they are erecting at Port Clements will be about 50 x 150 feet, and that its maximum capacity will be 75,000 feet per day. It is being erected chiefly for the purpose of sawing airplane spruce and the company expect to have it ready for operation about the first of March.

The Pine Grove Logging Company, Limited, has been incorporated with head office at Vancouver, B.C., and capital stock of \$20,000, to purchase and take over the logging and lumber business now carried on by Frank King and Wm. R. Allen at Pine Grove. The new company will carry on business as timber and lumber merchants, sawmill proprietors, and will manufacture lumber and timber products.

Sealed tenders are being received by the Minister of Lands for British Columbia, until the 20th day of February, 1918, for the purchase of License X468, to cut 4,331,000 feet of fir, cedar, hemlock and white pine on an area adjoining Lot 516, Sonora Island, Sayward District. Two years will be allowed for the removal of the timber. Further particulars may be obtained from the Chief Forester, Victoria, B.C.

Sealed tenders are being received by the Minister of Lands for British Columbia until the 20th day of March, 1918, for the purchase of License X1147, to cut 7,387,500 feet of yellow pine and Douglas fir on an area situated four miles south of Princeton, Similkameen District. Three years will be allowed for the removal of the timber. Further particulars may be obtained from the Chief Forester, Victoria, B.C.

The B. C. Loggers' Association, at its annual meeting in Vancouver recently, elected officers for the coming term as follows: President, A. E. Munn; vice-president, N. S. Loughheed; secretary-treasurer, W. B. W. Armstrong; directors, P. A. Lamb, A. P. Allison, F. C. Riley, M. D. Rector, W. C. McMaster, P. A. Wilson, J. M. Dempsey, A. A. Twart, F. R. Pendleton, J. M. O'Brien; auditors, T. A. Lamb, W. C. Broomfield.

Sealed tenders are being received by the Minister of Lands for British Columbia, until the 21st day of March, 1918, for the purchase of License X113, to cut 18,166,000 feet of fir, hemlock, cedar, balsam, white pine and spruce on an area adjoining S. T. L. 36134, Johnstone Straits, Rupert District. Three years will be allowed for the removal of the timber. Further particulars may be obtained from the Chief Forester, Victoria, B.C.

Sealed tenders are being received by the Minister of Lands for British Columbia, until the 21st day of February, 1918, for the purchase of License X1240, to cut 1,404,000 feet of fir, cedar and hemlock on an area situated within Lot 24, Mayne Passage, Thurlow Island, R. 1, Coast District. Two years will be allowed for the removal of the timber. Further particulars may be obtained from the Chief Forester, Victoria, B.C.

The G. & L. Logging Company, Limited, has been incorporated with head office at Vancouver, B.C., and capital stock of \$10,000, to acquire and take over the interest of Henry Dahl, Alfred Falk and Gustav Larson in that certain timber contract held by the said parties with the receiver of the Canadian Pacific Lumber Company, Limited, and all other assets of or belonging to said Dahl, Falk and Larson. The new company will carry on business as timber and lumber merchants, loggers, etc., and will manufacture and deal in timber, logs, lumber, shingles, sash, doors, portable houses, boxes, etc.

The United States Public Service Commission in a recent decision established a rate of \$1.50 per thousand feet on logs in trainload lots from points on the Tacoma & Eastern to Tacoma. The railroad had endeavored to raise the rate to \$1.75 per thousand, but this has been cut to \$1.50 for trainload shipments of not less than ten cars. The \$1.75 rate applies on single car shipments.

The Newspaper Bureau, which succeeds the old Newsprint Manufacturers' Association, in its report for November, 1917, shows the output of the United States mills to be at the lowest point for the year, while Canadian production was satisfactorily maintained. The production of Canadian mills for the 11 months in 1917 totalled more than for the entire year 1916.

New Specifications for Rived Spruce

Col. Brice Disque, of the United States Army Signal Corps, is cancelling all previous arrangements for rived airplane spruce. The changes are noted in a new bulletin, No. 10, issued on December 18th. The government now offers \$90 per thousand f.o.b. cars at point of inspection with a bonus of \$40 per thousand for everything accepted up to January 31st, and a bonus of \$30 per thousand for everything accepted up to February 28th.

The following specifications and rules governing the production and purchasing of rived or split spruce for airplane stock, are extracted from the revised bulletin No. 10:—

Spruce purchased must be split by wedging. The use of explosives in any manner whatever is prohibited. Cants must be 18 to 26 feet full in length; four sides clear, not more than 14 inches thick nor more than three feet wide on the bark surface. Annular rings must not be less than six to the inch. Grain must be straight throughout the entire length of the timber, without waves, knots or rot. Timbers should not be hewn or squared. The heart will always be removed. Only finest specimens of live trees should be fallen and no attempt should be made to utilize dead or down trees lying on the ground, or which appear to have shaky or spiral growth or have been burned. No piece with pitch pocket evidence will be accepted. Any abuse of these conditions will result in a rejection of the material and consequent loss to the producer.

The government will pay within ten days for carload lots of this material a price of \$90 per thousand f.o.b. cars at point of inspection. As an incentive to producers to make early deliveries, a bonus of \$40 per thousand will be paid for all pieces accepted up to January 31, 1918, and a bonus of \$30 per thousand for all accepted up to February 28, 1918. No piece accepted measuring less than seven inches at thinnest point either way, end measurement. No piece accepted containing less than 50 square inches on small end. To figure contents of pieces, take the average thickness each way and multiply to get square of end.

The Spruce Production Division, Signal Corps, U. S. Army, is operating under the following specifications for aircraft lumber which includes both Sitka spruce and Douglas fir.

Sitka Spruce Specifications

Thickness—2 in. to 6 in. inclusive, at least 60 per cent. to be 3 in. and 4 in. thick. Not more than 40 per cent. 2 in., 5 in. and 6 in. thick.

Width—All to be 4 in. and wider, not over 10 per cent. under 5 in. wide.

Length—Fifty per cent. to be 18 ft. and longer. Fifty per cent. to be 4 ft. and longer.

Measurement—Widths and thickness fractional inches. Lengths in multiples of one foot.

Grain—All lumber 3 in. and thicker shall be not less than 70 per cent. vertical grain of an angle of 45 degs. to 90 degs. on each carload.

All lumber 2 in. thick shall be not less than 30 per cent. vertical grain of an angle of 45 degs. to 90 degs. on each carload.

Grades—The 50 per cent. of all lumber 18 ft. and longer shall be clear four sides, straight grained, not less than six annual growth rings for each one inch, sound and well manufactured, free from shakes, spiral and curly grain.

This grade will admit of bright sap, wane, pin worm holes, slight variations in sawing or other defects that will not impair its use for wing beams.

The 50 per cent. of all lumber 4 ft. and longer shall yield clear cuttings straight grained, not less than six annual growth rings per each one inch, sound and well manufactured, free from shakes, spiral and curly grain; same may contain knots, pitch pockets, wane, pin worm holes, slight variations in sawing and other defects that will not impair its use for the purpose intended, providing, however, that each piece must produce, for buyer, clear straight grain, cuttings from 4 ft. to 17 ft. lengths, which shall not include over 5 per cent. of such cuttings 4 ft. to 7 ft. inclusive.

Knots—90 per cent. of the entire delivery to be free from knots on all four sides.

Douglas Fir Specifications for Wing Beams

Thickness and Width—4 to 8 inches thick; 4 to 16 inches wide.

Option—The mills, at their option, may furnish 10 per cent. 2 inches by 4, 6, 8, 10 and 12 inches; 5 per cent. 3 inches by 4, 8 and 12 inches.

Length Beams—18 feet to 40 feet; average 22 feet or more.

Grain—Straight; not less than eight annual rings to one inch.

Sap—To be bright and to be allowed in any one piece up to three-quarters of one inch in width on any corner.

Pitch Pockets—Will be allowed in any one piece not exceeding 2 inches in length, if the piece will produce by re-manufacture 75 per cent. beam stock 2 inches by 4 inches, 18 feet, or larger, vertical grain.

The Arctic Eiderdown Sleeping Robe

"Living the out door life in comfort."

GUARANTEES PERFECT SATISFACTION—ALWAYS.

Of the thousands of these robes sold we have never had one returned, nor in any way condemned.

The Arctic Eiderdown Robe is absolutely wind and moisture proof. Frost cannot penetrate it. It is positively sanitary—the more sun and air it is given the more resilient and thicker it will become.

Hunters, Motorists, Woodsmen and Lumbermen should never be without one. It can be slept on, in or under.

Its weight is almost nil, while its advantages are many.

Send name and address for interesting booklet just issued giving full information.

GOODHUE BELTING

For

Saw and Planing Mills

In a Goodhue Belt you get only the best leather with the stretch taken out of it. A Goodhue Belt will always run evenly and "clings" to the pulley transmitting 100% of your power

For the wet places in the mill we have a special waterproof leather belt—"Acme." Other Goodhue Belts are "Extra" and "Standard" recommended according to the conditions under which the belt has to run.

Goodhue Belts stretch less than any other belt by 15 to 25 per cent.

Send for prices and particulars

We have other "LITTLE DAVID" time-savers for wooden ship builders, such as Drills, Grinders, Saws, Drift Bolt Drivers, etc.

Write for information on Air Compressors, Air Hoists, and the complete equipment necessary to do your work, the "LITTLE DAVID" way.

Let "Little David" Do Your Work

In wooden shipbuilding, speed counts, if it counts anywhere, at the present day. There are many operations in this line of work which can be done to the greatest advantage by compressed air.

The "LITTLE DAVID" Way of wood boring is a good instance of quick, efficient work by compressed air.

The "LITTLE DAVID" Wood Borer shown in the cut is light, speedy and powerful. This tool is made in three sizes for holes from 1 inch to 4 inches diameter. Low repair cost and economy of air are two of its strong points.

Let us send you Bulletin 8507. It will interest you.

Your Bit

You have probably invested in Victory Bonds, and contributed to the Red Cross. Perhaps you are economizing in many ways also; but there is still another way to help—save power.

Chapman Double Ball Bearings

save 20 per cent of power by eliminating friction. If you are wasting power in transmission you are wasting coal—one of the articles the government requests us to conserve.

It is not necessary to shut down your plant to install Chapman Bearings. They are interchangeable with self oiling bearings of the same shaft size, and power is not the only thing they save.

Let us tell you more about them

Chapman Double Ball Bearing Co., Ltd.

Morehead Back to Boiler SYSTEM

Save 8 to 20% of fuel—

and increase the efficiency of your steam plant. The Morehead System takes condensation from steam lines and returns it to the boilers as pure, HOT feed water. Better service from steam

lines — actually increases efficiency of steam heated machinery. Many users report that steam heated equipment is made to produce 50% greater volume.

Ask us to send literature.

The Filer Who Knows

THE filer who knows what a good
Saw Gumming Wheel should be, al-
ways has on his saw filing machine an

Aloxite Saw Gumming Wheel

It is there because it cuts fast and cool,
because it cuts free and holds its shape
and shows long life.

Made in all of the standard shapes
and sizes

"Time is Money" There is the Recorder

A Modern Dial Recorder.

It
lets
you
know

The Exact Time when the man commenced work and when he finished. It's worth getting.

An International Time Recorder does not argue the point, it states an actual fact and never errs. You can rely on this Time Recorder, for reliability is built into every inch of it. Every wheel turns true.

Modern business men agree that an "International" means satisfied work people. There can be no pay-time disputes in the face of the International's unchangeable figures *as printed by the employee himself*. It also means increased production and greater all-round efficiency. Such a machine soon pays for itself—in fact, every concern, large or small ought to have one. There is a type of "International" particularly suited to your business.

Quit losing time, for time is money, and you cannot afford to lose it.

Write or call for prices and illustrated booklets.

DO IT NOW!

Shipment by car,
canal boat or
cargo.

Owing to constantly increasing sales we are anxious to establish new connections with Eastern Spruce mills, for shipment by car to Boston and New York markets, or by canal boat from Quebec to New York.

We also desire more connections with manufacturers of British Columbia red cedar shingles and cedar siding.

We will buy outright or sell on a 5 per cent. commission.

We manufacture Spruce at our own Mills at Portage, Maine, U. S. A., and therefore we know what big prices mean to the manufacturer

"ASBESTOL"
Gloves and Mittens

Whenever you find the need for strong, serviceable work gloves and mittens you find "ASBESTOL" on the job.

In lumber camps everywhere they are extremely popular because of the splendid service they render the wearer.

"ASBESTOL" GLOVES and MITTENS protect the hands as they must be protected. The rough work of the lumber jack holds no perils for the hands that are clad in "ASBESTOL."

"ASBESTOL" will resist snow and water, heat or steam. They are always soft and pliable and comfortable at all times.

Wearing "ASBESTOL" Gloves and Mittens means absolute protection for the hands. It is insurance that every worker in the lumber camp needs.

Ask for "ASBESTOL"
at your favorite store.

GRATON & KNIGHT

Standardized Series

LEATHER BELTING

Tanned by us for belting use

GRATON
AND
KNIGHT

Coal---Power---Belts---Production

YOU invest your money in coal to get power—**POWER**—the basis of production. If power leaks out in transmission, it **never becomes production.**

That is why selection of the belting that will transmit the greatest amount of power is a vital matter. It does not receive the careful study which it demands.

First: Use **leather** belting—the material that guarantees least power leakage; that is standard for main drives; that stands the mauling of shifters; that can be easily spliced and repaired; that when partly worn can be cut down for narrower pulleys; that has greatest elasticity and pulley-grip.

Second: Don't select belting on specification. Select it on scientific adaptation to the **work to be done.** Right here is the reason for the superiority of

Graton & Knight Standardized Series Leather Belting.

Twenty mills with practically identical needs often specify twenty varied types of belting. And yet the requirements of power transmission fall into a relatively small number of classifications. For each of those classes there is a Graton & Knight Standardized Belt. Long study and experience fixed that standard, and we keep it there—rigidly.

It will work an economy for you if you will let us specify the grade of belt for each pulley in your plant. Then, when you buy belting, call for "Graton & Knight — Brand or equal." This doesn't commit you to buying our belting. It puts your buying squarely and permanently on the only sound basis—the **work to be done.**

HARRIS HEAVY PRESSURE

Being heavy Munion Makers, we appreciate information as to where the best Tools, Steel, Belting, Lathes, Furnaces, etc., can be obtained, the object being to get the best results in our work and we are pleased when manufacturers put us right. For the same reason we respectfully bring before you, Harris Heavy Pressure Babbitt Metal, knowing it to be the best that money or brains can make for all-round Machinery or Shafting Bearings. We emphasize this as we know you appreciate the word of a reliable Firm. Years of service to the public of Canada prompts us to give the results of our knowledge of this Metal's qualities; it being both durable and moderate in price.

We Manufacture All Grades of Babbitt Metals.

LOGGING LOCOMOTIVES

Locomotives on trunk line railroads have the advantage of
the best facilities for inspection and repairs.

Logging locomotives face different conditions. They must
work day after day in the hardest service, and often in
localities where repairs cannot be made without great
inconvenience. That is why we build our logging loco-
motives from interchangeable stock parts. With this
system every part must fit every other locomotive of the same size and design, and long delays waiting for
duplicate parts are avoided. Interchangeable parts kept on hand at our Works for prompt shipment

"FROST KING" METAL

Our thirty-five years experience in metal mixing enables us to place on the market a babbitt that we believe to be absolutely perfect. For high speed machinery and engine work it is without an equal. It is specially designed for saw-mills, planing mills, threshing engines, traction engines, pumps, rolling mills, pulp machinery, and all classes of stationary engines. It is a high grade metal made of the very best selected stock, and carefully compounded.

If your dealer does not stock FROST KING send us a money order for your requirements. Price 30c per lb., Fort William and East; West of Fort William 35c per lb., delivered nearest railway station; packed in 30 lb. and 60 lb. boxes.

For extra duty, such as over-hanging saws, our TROJAN BABBITT will stand where all other metals will fail. Price, Fort William and East, 65c per lb.; West of Fort William, 70c, delivered to your nearest railway station; packed in 30 lb. and 60 lb. boxes.

HOYT METAL CO., Toronto, Canada

Have factory and office at Eastern Avenue and Lewis Street, Toronto, Canada

Factories also at:—

New York, N. Y.

London, Eng.

St. Louis, Mo.

**Not altogether what we
say but what users say**

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs,
in calm weather, 30,000 in a head wind.

for 40° below.

The illustration shows a man on the left, shirtless and standing in a natural setting. On the right, a man in a full winter outfit, including a hat, coat, and boots, stands next to a thermometer showing 40 degrees below zero. A log lies on the ground between them.

The logo is a semi-circular emblem with the letters 'A.R.C.' in a stylized font, and the word 'BRAND' written below it.

Our 1918 line is now ready for inspection. If you would like to see samples before placing your order, we will gladly arrange this for you.

"A. R. C." Clothing for Lumbermen is the same reliable brand you have been getting for years. The only difference is an improvement in style and in ideas for longer wear and greater comfort.

We can outfit your men complete from Caps to Shoe Packs. Every garment is made with the care of the best hand work. We know the wearing qualities necessary for satisfaction and no purchaser of "A. R. C." clothing is ever disappointed.

Look over the list of our clothing and send for catalogues and prices on any quantity you require.

Two Commodities Dear to the Heart of the Critical Fire Inspector are

EDDY'S ROUND BOTTOMED FIRE PAILS

AND

EDDY'S CHEMICALLY
SELF-EXTINGUISHING

"SILENT 500'S"

THE MATCHES WITH NO "AFTERGLOW"

No "glow" left when blown out!

Made of Indurated
Fibreware.

By a judicious arrangement of a series of our Fire Pails you should be able to get a much lower insurance rate on your Factory or Mill. Nothing can be more efficacious in case of fire than a few of our Fire Pails at the place before the fire spreads.

These pails are made with a specially rounded bottom so that they must be stood or hung in racks provided for the purpose, where everybody in the Factory or Mill knows where to find them when wanted.

WRITE FOR PRICES AND DETAILS

Will not become
watersoaked.

It was at the request of the Dominion Government that the Eddy Company, Canada's earliest and greatest matchmakers, started experimenting, some two or three years ago, with the idea of impregnating the "Silent 5" Match.

The successful result of these experiments was placed on the market about a year ago. The sticks of the "Silent 5's" are all dipped in a chemical solution which causes the match to go "dead" immediately it is blown out, thus eliminating the danger from partially extinguished matches—a danger the fire insurance companies have deplored for years.

AMPHIBIA

From Critter to Pulley

A belt is no stronger than its weakest hide—the foundation in the manufacture of leather belting is carefully selected hides.

AMPHIBIA BELTING

is made from the back leather of Packer steer hides—the best foundation for leather belting procurable.

From critter to pulley, AMPHIBIA receives the expert attention in its manufacture that has made it the "serviceable" belt under all conditions. It is made to stand the test of extreme climatic conditions often found surrounding the exposed saw mill.

Milk That is Always Fresh and Will Not Freeze Nor Turn Sour

This is the Final Answer to the Milk Problem in Lumber Camps

K LIM is the solids—and nothing else—of pasteurized separated milk in the convenient powder form. It is 100 per cent. body-building food value. It contains no filler or preservatives. It is absolutely pure. It is genuine.

KLIM remains sweet, fresh and wholesome indefinitely. The natural taste of fresh liquid milk is retained in it. In cooking the most convenient way to use Klim is to mix it dry with other dry ingredients such as flour, sugar, cornstarch and meals. For use as liquid dissolve in water. Klim brings out the natural flavor of tea, coffee and cocoa. It contains no added sugar, therefore no acquired taste is necessary to enjoy these beverages.

KLIM is low in first cost. Saves money in freight charges because it bulks small and weighs 50 per cent. less than other forms of milk.

There is no waste. Use as much or as little as you need. Cover the tin tightly and Klim will be sweet and wholesome when next needed.

KLIM will not freeze in the coldest weather or turn sour in the hottest. Does not require special refrigeration or any particular care in storage.

KLIM is packed in 10 lb. tins for camp use. Ten pounds makes forty quarts. We will gladly send you a sample for your cooks to use. It will convince you that Klim is the most economical, convenient, no-waste milk you can buy.

This illustration represents a tin of KLIM. In this tin is contained the purest and freshest milk reduced to a powder. No matter if you are a thousand miles from the nearest cow, and have KLIM, your cook has milk in the best form for cooking, or use in tea and other beverages.

All the goodness of separated milk is contained in this sanitary tin, and you can use a little at a time as needed, replace the cover and KLIM will keep pure and sweet indefinitely until used.

LEADERSHIP, after all, ascends to the fittest. Economy, service and value are the qualities which count.

The "Hamilton" imprint has been known for years as a sufficient testimonial for these merits.

"Hamilton" Garland Gang Edgers are especially reconized for their worth. They are strong, accurate and easily operated, made in all widths with necessary number of saws to suit requirements.

Let us give you further information. It places you under no obligation

ADJUSTABLE SAFETY CAR-STAKE EQUIPMENT

(SCHMITZ PATENT)

Mr. Logger, Attention !

We have the ONLY device that removes ALL danger and difficulty in moving your logs from camp to mill on cars, trucks or sleighs.

No balks, breakdowns or dislocation of parts—IT WORKS ALWAYS. Though still new, it is thoroughly tried and tested, and gives perfect satisfaction to all who use it. Nothing like it for speeding up production and reducing expenses.

It will save you TEN times its cost in wages, renewal of stakes, avoidance of accidents, and vexatious delays.

If you don't use stakes on your cars, you CAN use them with this equipment; you need it on your cars right now, and you will WANT it as soon as you find out what it will do for you.

Send for illustrated Circular, with testimonials, and let us convince you of the truth of these claims. Address

INTERNATIONAL LOG BUNK & EQUIPMENT CO., 2661 W. 57th Street Seattle, Wash.

Dr. Stewart's Veterinary Remedies

For quick results in emergencies

There are probably many times when your valuable horses need assistance—and in a hurry. A fall, a bad cut or disease may make it absolutely necessary to have immediate help that may be depended on for quick, reliable work.

A LIST OF DR. STEWART'S VETERINARY REMEDIES

Stewart's Sure Cure (antiseptic gall cure) the original, in liquid form, 16 oz. bottles	\$10.00 doz.
Stewart's Excelsior Liniment, 32 oz. bottles	12.00 "
Stewart's Lightning Colic Cure, the only colic cure that removes the cause, 16 oz. bottles	10.00 "
Stewart's Pure Condition Powders, 25-lb. pail, net	6.00 pail
Stewart's Hoof Ointment, 1 lb. can.	6.00 doz.
Stewart's Heave Relief, large can	6.00 "
Stewart's Cough and Distemper Cure, 50 doses to bottle	8.00 "
Stewart's Proud Flesh Powders	3.00 "

Dr. Stewart's Remedies have been used in the Lumber trade for years. They are well known and reliable for use at all times. Every stable should be well supplied with the complete list of remedies. This is the most inexpensive form of insurance you could possibly buy, and may mean the saving of time and money in replacing your horses.

Order a trial from this list, or send to-day for list and information on our complete line.

A little talk on the benefits of using First Quality Axes, Tools, Etc.

Every successful operator knows well the time saved, the increased production and the better grading made possible by keen, new, well proportioned axes and tools. The men welcome good equipment of this kind. For one thing, they know that a Company sufficiently progressive to supply this equipment, will be just as progressive with their help.

Reputation means much in the manufacture of this equipment. A trade marked brand such as ours becomes known far and wide in the Lumber Industry. Our trade mark stands for quality of the very highest type, both in design and manufacture. We have been making this line since 1865—more than fifty years, and we are steadily growing. Is this fact not sufficient evidence of the high standing of our Company and of our product?

The Ideal Edger for Light Mills

Specifications

Our new Double Edger is built on entirely new lines, and possesses many features that commend it to mill men. The saving in material alone will soon pay for the machine. The output of a mill with this machine can be increased by one-third. It is best adapted for medium-sized or portable mills that cut from 5,000 to 25,000 feet of lumber per day.

SAWS.—This Edger is fitted with either two or three saws as required. The saws are 16 in. in diameter, and 10 in. gauge. The greatest distance between saws is:—Two saw machine, 24 in.; three saw machine, 20 in, the least distance between saws, 2 in.

DRIVE PULLEY.—The Drive Pulley is 9 in. x 9 in., affording a good belt grip, and is supported by an outside bearing.

SAW ARBOR.—The Saw Arbor is made of 2½ in. steel, and has very wide bearings.

For Keep-Over Purposes

THE chief thought of every Lumberman when he purchases provisions for keep-over or bear-housing purposes is :

“When these goods are opened for use during the Spring, Summer or Fall, will they be in first class condition ?”

Quality is the most important factor in deciding whose product you will buy for this purpose.

The Harris Abattoir Company products, wherever known, have made a name for themselves and can be absolutely depended upon. We guarantee that they will stand up and give absolute satisfaction in every particular.

Write us direct, or address our Branch nearest to you. Let us quote you prices on the following supplies :

ONTARIO

The Banner Province

Ontario has pulpwood areas practically illimitable, and offers a great field for those desirous of embarking in the pulp and paper making industry.

Ontario has innumerable waterfalls capable of supplying power for all manufacturing purposes, which are obtainable on reasonable terms subject to development.

Ontario has large pulp and paper mills in operation at Iroquois Falls, Metagami, Ottawa, Sturgeon Falls, Spanish River, Sault Ste. Marie, Dryden and Fort Frances.

Ontario is traversed east and west by three great transcontinental railways, affording excellent transportation facilities.

Ontario's natural resources of mineral, pulpwood, timber and water powers are unequalled in the Dominion of Canada.

For full particulars as to Ontario's great resources and the advantages offered for large wood-using industries, apply to—

Honorable G. H. Ferguson,
Minister of Lands, Forests and Mines
Toronto

There's a Big Output of Big Dimension

When run on a

No. 16 Planer and Sizer

"The Invariable Choice of the Man Who Knows"

It will size and plane timbers up to 30 x 16 straight from the head rig. The finish will be so good that you can fill those big timber orders with a keen sense of pride in your product.

Base is cast-in-one-piece and every part is constructed over-strength. All important adjustments are at the operator's finger tips.

When the "big stuff" runs out, the No. 16 will surface lumber as small as $\frac{1}{2}$ x $2\frac{1}{4}$. A shiplap attachment is supplied on special order.

Right now the demand for big dimension is great. You have probably heard the call from shipyards, military camps, and other large construction projects of the day. The Yates No. 16 is the best answer. It will whip up your production, better your grades, and boost your profits.

Send for Circular No. 16 right away.

USE STEAM POWER For LOADING and SKIDDING

To INCREASE OUTPUT and REDUCE COSTS

Standard 2 Drum Engine for Skidding or Loading

The illustration on the left shows our standard Logging Engine for either Skidding or Loading. It will bring the logs from the stump to the track or water by any of the Ground Hauling or Cableway Systems. It will load the logs by either the Derrick or "Guy Wire" System. It will handle the logs much quicker and cheaper than horses and men, and thereby add to your profits.

The right hand illustration shows our special Engine for Loading or Skidding and Car Pulling. By the use of the Compound Gearing on the Car Pulling Drum a less expensive machine can be used for this purpose, while sufficient power is obtained to pull a train of cars loaded with green logs.

Special 2 Drum Engine with Compound Gearing on one Drum for Pulling Cars

MARSH & HENTHORN, LIMITED

Belleville, Ont.

The Three Goodhue Belts

"EXTRA" "STANDARD" "ACME WATERPROOF"

These three brands are made for three different services and each brand is the best quality made from selected hides with the stretch taken out.

"Goodhue Belts" stretch less than any other belt by 15 to 25 per cent. This quality effects a great saving because it is unnecessary to be continually shortening the belt to keep it taut.

"Acme Waterproof" brand is made for the wet places in a mill and will give a remarkable service under the most trying conditions.

When you buy a belt—buy a Goodhue. Prices and particulars on request.

THE "LITTLE TUGGER" HOIST CUTS THE COST of LIFTING and HANDLING

It is light and powerful, and will run by either steam or compressed air.

You can bolt it to the floor, to overhead beams, or to a post, or clamp it to a column or pipe in any position.

Unlike most portable hoists, it can be used for hauling as well as lifting.

The drum will hold 500 feet of $\frac{1}{4}$ inch wire rope, so its range is considerable. Drums can be had for manilla rope also.

The "LITTLE TUGGER" gives every day help, not once-in-a-while stunts.

Why not find out how and where you can use it?

Bulletin 4133 tells about the "LITTLE TUGGER."
Send us your address for your copy.

The "LITTLE TUGGER" hauls cars, raises and lowers material and tools, lifts and places timber, etc. It will save its cost many times over.

Canada, United States and Great Britain, \$2.00 per year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.
Entered as second-class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

Toronto, February 15, 1918

No. 4

Vol. 38

1917 — The Status of the Lumber Industry — 1918

In periods, when every enterprise proceeds along the even tenor of its way, it is not difficult to sit down and forecast the future. The signs of the times can be read with more or less accuracy, and predictions, that have every opportunity of being fulfilled, can be made with a reasonable measure of assurance and authority. Things known and not surmised are always safest, but it is not always possible to know and, in the realm of human events, the speculative always holds that which is of most vital concern. Not what has happened, but what is going to happen, arouses livelier interest and arrests attention.

To look into the future and gauge coming conditions by what has transpired was before the era of the war, comparatively easy so far as the world's lumber markets and production were concerned. The task of reviewing affairs during the year that has just passed and casting a horoscope over 1918 is no easy matter at this juncture. The strife in Europe still upsets all calculations, and the happenings of the unexpected casts aside many standards by which matters have been weighed in the past and renders any trade review difficult and inconclusive.

The events of the past year have been marked by so many peculiarities and uncertainties that students of the trend of the times may well sit down and reflect on what will happen next. New occurrences have come to light accentuating the perplexities which manifested themselves during 1916. Among these are the increasing shortage of available labor, the congestion of transportation, ascending freight rates, augmented operating costs both in the camps and the mills, and rapidly mounting overhead charges. All these have resulted in higher prices, and, in some instances, decreased stocks.

The export trade has been depressed by the high ocean freight rates, the government restrictions on the imports into Great Britain and scarcity of bottoms. Large contracts for munition boxes declined and there was a perceptible dropping off in building activities. Whether matters will improve depends upon the ability of Canada and the United States to furnish ocean carriers to replace those constantly being sunk in the submarine campaign and the available space in vessels after provisions, munitions and other requisites for the men at the front are taken care of.

Added to the difficulties which have arisen during 1917 is the presence of numerous freight embargoes and the rigors of an unusually cold and severe winter, the like of which has not been experienced in the last half century. For many weeks traffic has been badly tied up, and the mills have not been able to obtain anything like sufficient cars to make shipments. While transportation facilities may be improved there is one thing certain, that as long as hostilities continue, there will be a growing shortage of labor and, with enhanced living expenses, wages will steadily ascend. Owing to these causes, curtailment has taken place in woods operations and the output for 1918 is variously estimated around seventy-five per cent. of last year's production.

Scarcity of stocks in some lines, together with underlying economic conditions, have contributed to much higher prices, but it is doubtful if the augmented figures have kept pace with the mounting cost of operation and raw materials. In many quarters the market has been spotty and in opinions on trade conditions, secured from various branches of the industry, there is a wide divergence of views on the prospects for the coming year and the features which characterized the one just closed. The consensus appears to be favorable and few pessimistic predictions are heard. There is an appreciation of the fact that the lumber interests are facing problems today such as they have never encountered previously, but the watchwords of the future are co-operation and service, efficiency and conservation.

The export trade was not encouraging, being very much less than last year. The figures are not available, so that it is impossible to make any comparisons with the returns before the war. Exporters are hoping for some relief in the present restrictions, as the United Kingdom requires a large quantity of timber, and it is only reasonable to expect that facilities will be afforded for Canada supplying it.

On the whole, there is a disposition to meet conditions calmly, and the judgment of the most experienced and far-sighted is that top values will continue. The developments of the trade and how different phases of it have been affected or are likely to be influenced, along with market and manufacturing problems of the past and coming year, are dealt with fully elsewhere in this issue, which contains several features that should make it acceptable and instructive.

Rather Strange Year in the Lumber Trade

Volume of Business was Good on the Whole—Trade Faced by New Difficulties which Increased Cost of Production—Prices Likely to Ascend

Conditions in the lumber business, according to reports received from many points during the past year, vary to a large extent. In some districts the records show that sales greatly increased over 1916, while in others a falling off was noted, but the volume, owing to the higher values which prevailed, exceeded that of the previous season. At numerous points, stocks are reported to be low. The trade also had to face an abnormal situation generally in increased wages, shortage of labor and tremendous advance in woods operations and supplies. Naturally such extreme conditions have resulted in building not being undertaken on as large a scale as in 1916. From present experiences it would seem that the stocks will be much lower during the coming season owing to the decreased cut in the woods and the fact that it is costing from 40 to 50 per cent. more to get out logs than last winter and, even on this basis, the results are somewhat disappointing. As one eastern firm points out, it does not appear to be a question of wages so much as the inability to get good men. Conscription has invaded the woodsmen to a degree that has been emphasized recently by the ineffectual attempts to get men of any kind. At some points there is a complete dearth of available labor.

Among other obstacles was the shortage of cars and the difficulties of transportation. A gratifying feature of the situation was that less complaint was heard in regard to high prices and builders demonstrated that they were becoming reconciled to exalted quotations for materials. Contractors realize that all the elements of cost which enter so largely into the finished product have to be taken care of and naturally the builder has to lift the burden and in turn pass it on to the owner of the structure. It is another case, in the last analysis, of the consumer carrying the load. However, in times when stress and strain are of such a character that lifelong traditions have been upset in a twinkling and new regulations ushered in, that before the war would have created new precedents, the established order of things goes by the board. Men, who have figured in the role of prophets, and have usually been in a position to gauge more or less accurately the market and the trend of the times, find themselves all at sea when it comes to surveying the future with respect to affairs of supply and finance.

The export trade is of such an uncertain character and being hampered by so many embargoes and other restrictions that it is impossible to speak with any note of certainty regarding the probable demand for Canadian timber broad during the present year. The consensus of opinion is that higher prices will prevail, and while the volume of trade in 1917 may not equal that of 1916, so far as actual output is concerned, still on a dollars' and cents' basis it is likely to surpass the record of the past twelve months.

The outstanding obstacles of the past year, which are particularly acute at the present time, are the exceptional shortage in labor and the congested state of transportation. In war time any demand often undergoes sudden changes and when to this uncertainty are added rising costs and delayed deliveries, the average operator scarcely knows where he is at. However, it is pleasing to state that in the interviews secured by the "Canada Lumberman" with representative firms in different parts of the Dominion that no strain of pessimism prevails. The outlook on the whole is considered fairly satisfactory. There is a disposition to accept matters as they are and meet every situation as it arises, calmly and earnestly, rather than indulge in unwarranted speculation or gloomy retrospect.

Found the Year Exceptionally Good

The Brompton Pulp and Paper Company, of East Angus, Ont., report that the demand for lumber during 1917 was exceptionally brisk. They are of the opinion that it will improve during the year 1918. The manufacturers must, however, receive higher figures, as the cost of getting out logs this winter has been very high; owing to the extremely cold weather and the high prices that the companies are obliged to pay for provisions of all descriptions.

The Houston Company, of Tweed, Ont., declare they had the usual volume of business during the past year but that the scarcity of skilled labor and the difficulty of securing stock prevented any increase in business.

The Dawson Lumber and Manufacturing Company, of Bridgewater, N.S., observe that, in a general way, they found business during the past year as very "spotty." Most of their trade has been with corporations and government business. The percentage of their ship-

ments, that went to the regular trade in the United States during the past season was very small and did not amount to probably more than ten per cent. of their business, while in 1916, at least, eighty per cent. of their business went entirely into the yard trade in the United States.

Prices Will Have to Increase

The Sherbrooke Lumber Company, of Sherbrooke, Que., say that previous to the war, they exported ninety per cent. of their cut to Great Britain but since then they have not shipped a foot. In regard to conditions which characterized the export trade to the United States, the company add that the export of lumber from Barabois across the border was practically nil during 1917, but there is no question but that the demand for spruce in Uncle Sam's domain so affected the available supply that they were able to place their stock in Canada to advantage. Touching upon the trade outlook for 1918 the company assert: "In so far as our own experience is concerned, we will consider ourselves fortunate if we secure fifty per cent. of our normal cut, and no one knows what the final cost will be. Our section of the country was invaded by agents from the Ottawa Valley offering any price for labor with fares paid both ways. In consequence we have been extremely short of help, which, taken in conjunction with the tremendously increased figure for provisions and supplies and the time lost by the available labor owing to confusion and misunderstanding regarding registration and physical examination under the Military Service Act, and weather conditions, it is almost impossible to estimate what the final outlay for our production will be. During the past thirty days the demand has been good with steady increase in price, but the figure will have to advance considerably to leave any margin of profit in 1918 sawing.

The Galt Lumber Company, of Galt, Ont., say that the building trade in their city was not as good as in former year. Regarding the outlook for 1918, they believe that it is too early to gauge the situation properly.

The Turnover was Normal

The Ross-Taylor Company, of Exeter, Ont., write that they found business in 1917 was about normal as to volume. During the first part of the season, and up to September, they found trade very good, but after that month, business began to slacken up, and in December their sales were over \$3,000 less than December, 1916. They experienced, as most other dealers did, the heavy increase in lumber prices, which from March to December 31st amounted to 33 per cent., and having considerable work taken before the heavy increase took place, it caught them so that they were forced to deliver material at less than cost. But taking their profits on the whole, they were a little better than 1916. This they attribute partly to knowing that they were up against it, and shoved things along as fast as they could. The firm add: "The present outlook for building in our district is very poor, and from what we can find regarding our wholesale trade in the cities, it is going to be very quiet. We are not placing any orders for lumber, and feel that with the present outlook, it would be unwise to do so."

Money Value of Sales Showed Increase

J. B. Mackenzie, of Georgetown, Ont., in referring to the retail lumber business during the past year, says: "Our records for 1917 show that our sales, in money value, increased 10 per cent. over that of 1916, but the amount of lumber retailed would be less owing to higher prices. Conditions at present are quiet and there will be very few new houses built this year. The action of building mechanics in demanding such high wages will react on themselves as the public hesitate to undertake any but necessary improvements owing to excessive cost. The fact that there is very little money available to let out on mortgages makes it impossible for the small home builder, who has, say, a third of the money necessary to complete a home, to start. In our opinion retailers with a good stock on hand will find a ready sale owing to scarcity of lumber, and if his local demands are small will be able to get the outside business that will be necessary to turn his stock."

New Conditions Had to be Faced

The Knight Brothers Company, Limited, of Burk's Falls, Ont., state: "Compared with the year of 1916 we find during 1917 that we had to face several further increases in wages, and also in stock and

plies of all kinds. Fortunately, selling prices increased in nearly great a proportion, owing to the scarcity of stock and manufactured products. Regarding present conditions, as far as we are able to feel them, in this locality, they are much the same as last year, and we anticipate a similar series of increased cost for labor, raw material and supplies. With respect to the outlook we believe that the extreme conditions noted above will tend to curtail building operations using lumber and goods manufactured therefrom. Notwithstanding this, we are of the opinion that sufficient building will be undertaken and other operations carried on to consume the very limited stock which will be produced from this season's log crop."

Labor Shortage Affects the East

Reviewing market conditions and operations of the past year, a trading firm in St. John, N.B., assert: "First of all, as compared with a year ago, it is costing the operators in the woods from 25 to 50 per cent. more to get out the logs, and even on that basis it is more difficult to get them than heretofore, the reason being very largely a shortage of labor all over this country. It does not appear to be a question of wages, because the operators are willing and prepared to pay big wages in order to secure men. The difficulty appears to be entirely getting good men. Very many of our lumbermen enlisted before conscription, and, of course, many of them will be taken under conscription. Probably in view of the market conditions a very large cut is not particularly desirable. There is less than the ordinary quantity at this time of year going forward to the English market, a large quantity—practically all of the stock—going forward to the English market is either on British or French Government account. The market in the United States, particularly the New England States, has been extremely satisfactory, with the prospect that it will continue so, and, while at times it is difficult to secure cars in a general way, the mills doing with that market have done very well, and have had a very profitable year."

Output Will Be Decimated

John Harrison & Sons Company, Owen Sound, Ont., write that trade conditions generally during 1917 were better than they had expected. Orders keep coming in. The indications are that the output of timber in their district will be less than usual.

The Hall Lumber Company, Boston, Mass., remark that conditions of late have not changed except to put a further damper on business. The firm add: "As you are aware, under the order of the Fuel Administrator, this section is affected greatly on account of forced shutdowns. The actual number of working days for February are only 17 days, allowing half days for Saturdays, and with the embargoes existing on shipments from the south and west, together with the very cold weather and snow which we have had, business is absolutely at a standstill. There is no incentive for the retailers to buy and it seems to us that the situation existing to-day is apt to continue for some little time to come. We regret we are not able to give any more optimistic view of trade conditions here."

Retailers Benefited by Rising Market

The Wm. Shirton Company, Limited, of Dunnville, Ont., in an interesting review of conditions, say: "The year 1917 was peculiar in many respects, as regards the retail trade. Never before had we experienced such difficulty in getting certain kinds of lumber and when shipment had been made we were compelled to keep right after the shipper, urging him to have tracers placed on every car. Some of the cars contained lumber which the wholesalers, from whom we bought, offered to buy back at a considerable advance in price, owing to the rapid rise in the market. Less objections to high prices were received from our customers who were rapidly getting accustomed to the high cost of building. Taking it all in all, it was a year when most retailers benefited by the rising market and thus compared favorably to the years before the war and was considerably better than 1914, 1915 or 1916. At present, it is difficult to forecast the outlook for the coming season. High prices prevail to a very substantial extent and this may have the effect of putting a stop to many contemplated buildings, particularly in the rural districts. On the other hand, there is a good demand for buildings in some towns and cities. Rents are high and vacant houses scarce. Certainly, there will be building on a considerable scale in these places in spite of the high cost of labor and material. Looking at the matter from every standpoint, we are inclined to think that trade in 1918 will not equal that of 1917, and it will be necessary for retailers to economize as never before. One of the best ways to economize is for the retailers to co-operate and learn from one another the cost of doing business. Again there is the matter of freight rates, insurance, Workmen's Compensation, transportation, standardization of grading of lumber and a host of other problems, which the Ontario Retail Lumbermen's Association, recently formed, are taking into consideration. No retail lumber dealer can afford to be without the services of this Association and we cannot too strongly emphasize the great importance of retailers availing themselves of the oppor-

tunity to become members. No matter how well and successfully we have conducted our several businesses in the past, we are never "too old to learn," and the other fellow may have some ideas well worth adopting."

Increased Demand and Lower Stocks

Austin & Nicholson, of Chapleau, Ont., say with respect to the conditions in 1917: "The demand for all lines produced by us was most active and prices were fairly good and much higher than formerly, but not out of proportion to the cost of manufacturing. The same condition prevails at present. With regard to the future one hesitates to venture very much in the way of a prediction in the face of the state of uncertainty in which we are living; nevertheless, if we can see 1918 conditions at all we would say that the demand for all kinds of lumber is likely to increase and the stocks from which this demand can be satisfied are going to be much below normal. The cost of production is constantly increasing, so that prices will have to increase proportionately. We ourselves are not yet in a position to definitely fix a price for our 1918 output, there being so many uncertainties as to what the ultimate cost of putting the stock into the yard will be. In many sections it is going to be a vital question as to whether the mills can operate full time or not, this being due to the labor problem."

Says the Situation is Curious

A leading Toronto firm states that, at the beginning of 1917, the wholesalers had under contract a large supply of dry stock in all lines. There was still on hand at the mills and unsold, a plentiful supply of spruce, hemlock and white pine. Prices were firm but low, indeed, when compared with those being quoted at the present time. Large orders for munition boxes had been placed late in 1916 and wholesale dealers generally were turning over good business at profitable prices. The building trade also showed some activity in the spring and retail yards and factories stocked up in anticipation of fall trade, and hemlock, spruce and white pine were in active demand until in 1917. In the summer the shortage of cars began to be felt. Shipments were delayed and embargoes were put on and off, without notice, to the great inconvenience of the shippers and the dealers. The United States demand for white pine was active during the shipping season, and as far as low grades are concerned, the demand has been maintained. The orders for munition boxes, which had contributed to maintaining good business for the first half of the year, were pretty well completed late in the fall, and since then a very limited number of orders has been placed in Ontario. The railways have completely broken down during the past three or four months and business has been paralyzed by inability to obtain cars for shipments or have deliveries made in any reasonable time, even when cars have been secured. Many dealers have orders on their books that are six or seven months old. Stocks, which have been settled for on pro forma invoices, are carrying interest and insurance and the dealers' profits are being swallowed up by the charges. If even a moderate demand arose from the building trade it would not take long to exhaust the stocks now in the yards, and operations would be crippled for want of material. There is every reason to expect that the logs taken out this winter will fall far short of the average cut. Some manufacturers estimate the shortage at fifty per cent. Spruce, hemlock and white pine prices are climbing up and no limit is in sight. The present situation may be summed up as the most curious in the history of the trade. Shipments are embargoed, lumber is scarce, trade is depressed, prices are soaring, and the outlook for next season baffles the imagination and the judgment of the most experienced and far-sighted lumbermen.

The Car Situation is Serious

"The demand for lumber was abnormal during 1917, and at higher prices than has hitherto been known in the trade," declare Chew Bros., of Midland, Ont., who add, "that while the manufacturer enjoyed the benefit of these conditions they were offset in a large measure by the enormous increase in cost of production. A large percentage of the mill run grades of white pine is being exported to the United States. While we have pressing orders on file for upwards of two million feet of lumber, scarcely anything is moving, due to scarcity of cars and the inability of railroads to take care of the business. Due to scarcity and excessive cost of labor and supplies we are of the opinion that log output for 1918 will be reduced. While the cost of labor and supplies for 1917-17 operations was very high, that for the current season is costing us between 30 and 40 per cent. more with respect to bush work. The prospects are there will be a substantial advance in prices for 1918 over 1917. This condition may exist without extra advantage to manufacturers, as this will doubtless be absorbed by the increased cost of production. Under present abnormal circumstances, we prefer not to commit ourselves further respecting a forecast of trade conditions for 1918."

Trade Was Fairly Satisfactory

Describing the chief factors that affect this year's trade, an eastern firm says: "Practically all overseas demand originated from war re-

quirements, and as a result wood-goods found their way across the ocean to a greater extent than generally known; moreover, overseas supplies were greatly increased by operations in Great Britain and France. Shipments, however, were reduced as compared with the previous year, although owing to greatly enhanced values, the reduction in dollars was necessarily smaller than in quantities. Fortunately for the export trade, the persistent demand from the United States for war requirements absorbed most available lumber, so that the past year's trade, while uncertain, may be considered as having been fairly satisfactory. The one outstanding difficulty, which was a general one, was the question of transportation, and this question still remains unsolved. As regards this year's outlook, the immediate situation is about the same as has prevailed during the past six months. The increased cost of supplies and labor has advanced prices to a point which calls for very careful consideration of large contracts, and it is earnestly to be hoped that any temporary situation which may develop will not be taken advantage of speculatively to boost prices above those warranted solely by the extra cost of production, on which increase all prices should be based."

H. Bourgouin, Montreal, states that, owing to present conditions and the outlook for 1918, it is impossible to express any definite opinion. The circumstances are abnormal in every respect.

Another eastern firm observes, with respect to the lumber trade for the coming year, that one man's guess is as good as another's, and that retailers are getting short of stock owing to embargoes and car shortage.

Shepard and Morse Lumber Company, of Boston, write that prices are very irregular now and quotations vary considerably. No. 1 and clear spruce have advanced a great deal. There is not much of this used at present, except for airplane stock, and that brings a very high figure. There is little new in the way of trade development, except that prices along lumber lines are gradually working up, and the enhanced figures seem to be necessary because of the continual advance in the cost of production. "Generally, we believe trade to be rather dull outside of the war activities in the lumber lines, but there is so much of that, in both Canada and the United States, it creates quite a large demand for people who are situated so as to take advantage of it. We are still considerably behind on our orders and unable to get shipping facilities to catch up," they conclude.

The McMaster Lumber Company, of Kemptville, Ont., which recently secured a provincial charter, report that they intend to increase their production, as the demand in their line has been greater than the supply. They now hope to keep up with their orders.

Fear Higher Prices Would Curtail Building

The Reid Bros. Company, of Niagara Falls, Ont., sum up matters as follows: "There has been a very fair volume of trade here throughout 1917. The house building trade has been active and factories all running to full capacity, thereby consuming a considerable quantity of lumber. The Hydro Electric power development has created a feeling of optimism which has had a beneficial effect on trade during the past season. At the present time conditions look rather gloomy for the house building contractor. In spite of the fact that there is a demand for houses it seems to be difficult to realize a price which makes it profitable to build. The majority of the retail lumber yards in this district are at present carrying much larger stocks than one year ago, but only stock which is absolutely required is being bought today. It seems to us that a price is now being obtained for lumber which should fully compensate for the increased cost of production, and we think the market will bear the present prices. Further advances will, in our opinion, have a tendency to increase the indecision of prospective builders and no doubt curtail this trade to a great extent. We believe that it would be wisdom on the part of the manufacturers to call a halt in prices, at least for a time, which would probably result in a good year's business for all concerned."

The McKinney Lumber Company, of Woodstock, Ont., say that their business during 1917 was equal to that of the previous year and the prospects for 1918 are better with them than they have been for some time.

Another eastern firm reports that at the present time they have cancelled their outstanding list as with the present rate of going it would take the balance of this to move the stock they have sold ahead. According to their best estimate they are able to make at this juncture they will get out about fifty per cent. of their usual cut, which will cost them at the very least fifty per cent. more than last year and perhaps this percentage may run higher.

Firmness is the Keynote

Murray and Gregory, of St. John, N.B., assert that it seems useless to make any forecasts of the lumber market as far as St. John is concerned. Seemingly every month brings forth very little change, and whatever change there is comes so gradually that no one at the present moment can distinguish any light toward improvement. No offers have been made by the deal merchants as far as 1918 contracts

are concerned, and they do not appear disposed to name any price, claiming they can see no opportunity to ship across, that day by day matters are getting worse, and it is useless to take any chances. Really no deals are moving except a few on government orders, and those are limited in quantity. As far as shipments to the United States are concerned they are practically nothing. Storms and cold weather, the worst weather conditions in many years, have caused the railways to become congested, and embargo after embargo has been placed. Today a manufacturer might have five or six cars, if he were lucky enough to get them on his siding, start to load on and perhaps an embargo would be placed by night and the rest of the empty cars hauled off. How can the manufacturer do business against these odds, and where is he going to land in 1918? These are the two most serious questions which confront him to-day. No one will offer a profitable price. Stock cannot be moved on account of bad weather. Shortage of cars; logs higher in price than ever before and going higher; wages and inefficient help causing exorbitant values; therefore, if the manufacturer does not get an extremely high figure for manufactured lumber in 1918 he will meet with very serious losses. Business locally is at a standstill, caused first of all by zero weather and deep snow, and, of course, the war is the second excuse. This condition will likely exist until spring, when considerable work will no doubt be undertaken, as the prospects are good. As usual, there are no spruce boards at St. John, and factories are resawing deals at high prices; this makes extremely high priced boards. Low grade lumber, such as refuse, is also scarce, and in good demand; even this class of goods is higher than ever before. No quotations can be given at this date any more than to say that the deals here are held by purchasers, largely the government. Any local factory business is bringing high prices and no one is disposed to sell at any weak figure. All around firmness is the keynote, and hold on with hopes of better things.

What Constitutes a "Good Buy"

D. Aitchison & Company, Hamilton, Ont., in touching upon conditions in the lumber business in 1917, say that there was a steady advance in the price of all material in business during the whole year, and any lumber bought at current prices was what might be termed a "good buy." The demand for building material for new work such as residences, etc., has steadily fallen off on account of the advance in the price of both material and labor, but factory extensions and renewals helped to make up for the falling off in orders for house material. The outlook for 1918 is not so good, as lumber during the past few weeks has advanced so rapidly in price as to almost cut off its use except for buildings and work which have to be carried on regardless of expense. "We feel," they add, "that every week is bringing us nearer to the time when the top will be reached and the down grade in prices will commence. This will depend largely on the duration of the war, and what effect the cessation of hostilities will have on business generally. Should the war cease suddenly and a slump occur, we feel that the lumber business would be one of the first to recover, as stocks are very low and there is bound to be a large demand for material to replace stocks both in this country and in Europe."

The Thorold Planing Mills, Thorold, Ont., report that during the past year their business dropped about thirty per cent., and during the present winter sales have fallen off by one-half as compared with last winter. "The outlook for 1918 at the present time in house building looks rather unfavorable, but being located in a factory district we have hopes of a fair business from the factory end. Farmers are buying very lightly owing to scarcity of help, which will continue as long as the war lasts. Generally, we are looking for a small year in 1918, as building for speculation at the present time has received a severe jolt, and the people who come in for the remodeling and repair jobs are beginning to think they may have use for all their money before the war ends," they conclude.

Big Revenue for Forests and Mines

In presenting the budget to the Ontario Legislature, Hon. T. W. McGeary, provincial treasurer, announced that in three and one-half years of war time which called for many unusual disbursements, Ontario piled up a surplus of over \$3,000,000, including a net surplus of \$1,751,374 for 1917, which is the biggest in the history of the province. The receipts in the Lands, Forests and Mines Department amounted to \$3,579,196.06. In the fiscal year 1915 and 1916 the total receipts from this branch of the government were \$1,860,557.37, so that there is a gain of \$1,718,638.69. This is principally accounted for by the fact that last year the province received \$1,366,892 from the nickel tax made up of arrears of 1915, 1916 and 1917. In the estimated expenditure of the fiscal year ending October 31st, 1918, the provincial treasurer puts down the possible receipts in the Lands, Forests and Mines Department at \$2,875,000. In the estimated expenditure, the charges on Crown Lands are set at \$955,543.45.

Ontario Production Decreased in Year 1917

Drop of Over 42,000,000 Feet as Compared with 1916—Lath Output Shows Large Increase—Small Decline in Shingles

The production of lumber in the Georgian Bay and Northern Ontario districts in 1917 showed a decrease of 42,643,548 feet, b.m., as compared with that in 1916.

The total output in 1917, as set forth in reports to the "Canada Lumberman," amounted to 651,998,340 feet, b.m. The 1916 figures, according to the same returns, aggregated 694,641,888 feet, b.m.

The falling off is attributed in a large measure to the shortage of labor, increased cost of operation, embargoes, freight congestion and irregular markets caused by abnormal manufacturing conditions

created by the war. The scarcity of ocean tonnage and excessive carriage rates on exports were also contributing factors in the decreased showing of the last twelve months.

The production of lath in Ontario, according to figures received, totalled 254,061,750 pieces in 1917, as compared with 228,647,090 pieces during 1916, showing an increase of 25,414,660.

The shingle production was 17,410,250 pieces in 1917, as compared with 18,081,250 pieces in 1916, a decrease of 671,000.

Following are the statistics in detail:

Georgian Bay and Northern Ontario Production

Lumber

	1917	1916
Biscotasing	3,200,000	3,500,000
Blind River	17,300,000	19,000,000
Boakview	2,250,000	1,500,000
Bracebridge	6,137,918	3,438,440
Burk's Falls	4,925,000	6,067,000
Bear Lake	2,000,000	1,500,000
Byng Inlet	32,500,000	30,500,000
Bala	2,000,000	2,000,000
Chapleau	9,000,000	9,000,000
Cache Bay	31,100,000	17,000,000
Callander	14,227,656	21,166,212
Cutler	60,687,809	64,641,967
Elk Lake	2,000,000	3,000,000
Field	3,000,000	2,000,000
Fesserton	3,000,000
Fort Frances*	95,584,066	95,584,066
Haliburton	1,230,000	2,525,000
Huntsville	6,648,954	5,750,000
John Island	15,500,000	15,500,000
Jacksonboro	6,140,472	4,144,834
Kearney	4,116,000	3,376,000
Kinmount	1,800,000	2,000,000
Keewatin	15,000,986	15,834,252
Little Current	13,000,000	13,000,000
Longford	3,500,000	4,000,000
Magnetewan	1,330,960	1,881,155
Midland	60,042,987	63,404,965
Marksville	1,950,000	2,000,000
New Liskeard	3,630,000	4,000,000
North Bay	18,000,000	28,000,000
Nesterville*	21,500,000	21,500,000
Otter Lake Station	2,000,000	4,500,000
Owen Sound	7,500,000	8,500,000
Parry Sound	7,000,000	7,500,000
Pakesley	5,000,000	7,000,000

The firms indicated by an asterisk did not submit figures for their 1917 cut and their 1916 figures have been used in order to complete the summary.

Very Fair Season in New Brunswick

The impetus given to shipbuilding, and better demand for various kinds of wood across the border, particularly spruce, resulted in what is regarded as a fairly satisfactory year for the trade in New Brunswick. The cut in 1916 was in the neighborhood of 700,000,000 feet, showing a gain over the preceding year. It is not anticipated that the showing in 1917 will be as large, owing to the scarcity of labor and the increasing cost of operation. No figures are yet available. As far as the North Shore is concerned the results of 1917 are being viewed with a fair measure of satisfaction. To the increased cost of labor and material there have been the difficulties of an unusually severe and long winter. The snow in various parts has been exceptionally deep, impeding cutting. The higher prices have come to the relief of manufacturing conditions in certain cases, but it is doubtful if the quotations now prevailing counterbalance the augmented expense of production and materials. Stocks are, on the whole, about on the average.

During the past few weeks considerable stocks of spruce have been purchased by the United States Government, and this line is

moving freely, as no restrictions or embargoes apply. No business in English deals to be sawn during the coming year has yet been made, and the producers are not very anxious to enter into any negotiations regarding sawn material until they have some conception of their stock of logs and their cost. One contributing factor to the shortage of log production is that men jump camp frequently and render much variation in the continuity of camp operations. A year ago logs which cost \$22 per thousand will this season entail from \$27 to \$28 per thousand. At St. John the grade of logs so far as size is concerned, will not be nearly as large as last spring. It is interesting to look forward to the coming year and to note that local trade is steadily improving, being considerably better than at the opening of 1917. Lath and shingles are pretty well cleaned out from the docks at St. John and there is fear that cedar shingles may be scarce in 1918, owing to the shortage of cedar logs.

Transportation and heavy freight rates are the great troubles. The obstacles in the way of moving wood products, both raw and manufactured, are such as have never been encountered before. It will take not a few weeks for the railways to relieve the situation.

The Ottawa Valley Production

Figures Show an Increase Compared with 1916—Shingle and Lath Output Also Show Considerable Gain

Ottawa, February 9th (Special to the Canada Lumberman):—Though lumbermen of the Ottawa Valley, during 1917, had to contend with a variety of adverse and changeable conditions, they increased their trade and production in lumber, lath, and shingles, as compared with 1916.

The outlook for 1918 is bright, providing transportation can be brought to anything like normal. The transportation problem and the various embargoes in the United States are two of the biggest problems confronting the lumber trade of the Ottawa Valley. Reports from mills all over the Valley show that indications are favorable for increased export trade to the United States.

A shortage of labor is hindering the 1917-18 wood cut. The number of logs to be gotten out this season will not be as great as during the cut of 1916-17.

The lumber production in the Ottawa Valley during 1917 amounted to 433,160,987 feet, as compared with 354,327,009 feet in 1916, an increase of 78,833,978 feet. Lath production totalled 77,400,250 pieces as against 53,867,000 pieces in 1916, an increase of 23,533,250 pieces. Shingle production last year amounted to 33,324,000 pieces as compared with 32,749,750 pieces in 1916, an increase of 574,250 pieces. The value of exports from the Ottawa Consular District to the United States during 1917 amounted to \$4,151,942, as compared with \$3,840,050 in 1916, an increase of \$311,892.

Approximately 10,500,000 feet of the lumber production was hardwoods.

The volume of trade with the majority of the mills in the Ottawa Valley increased as compared with their 1916 business. Profits were slightly better than 1916. Prices generally increased from \$3 per M. to from 25 to 50 per cent. Stocks as indicated by the reports from the mills are less than a year ago. Shingles generally were fairly good. Lath, while slow with some mills, was good with others.

The export trade to Great Britain showed a decided falling off on account of the shortage of bottoms. Generally the Ottawa Valley mills are of the opinion that this season's log output will be from twenty-five to thirty per cent. below that of a corresponding period last year.

The majority of the mills report the trade outlook is bright, with the prospect of the market advancing, owing to the increased cost of logging and lowered production.

The following tables show details of production:

Ottawa Valley Lumber Production

Will Co-operate in Lumber Purchase

An important meeting of the Executive Committee and Board of Trustees of the National Wholesale Lumber Dealers' Association was held recently at 66 Broadway, New York, and many topics were considered, among the most important being that of co-operation with the government in the purchasing of lumber. The special committee appointed to look into this subject reported that several visits had been made to Washington, and after considerable discussion the committee was directed to pursue the matter further in the interest of the Association membership. Following the meeting on the 18th, the committee immediately resumed its work.

The report of the railroad and transportation committee, covering many phases of transportation problems as affected by government control of railroads, was considered together with the report of the special railroad committee appointed at the annual meeting at Pittsburgh to obtain relief in the way of car supply, embargoes, etc. The committee has accomplished much for the members and was especially successful in having thousands of cars placed at advantageous points. Further action along several transportation lines was instigated, looking to the improvement of transportation conditions as it affects the lumber trade.

The question of terms of sale and trade ethics in connection with its application to the lumber industry was considered, as well as affiliation through representation in the American Trade Acceptance Council. Numerous communications from members recommending an education campaign on the subject of trade acceptance were considered, and the committee on terms of sale and trade ethics was instructed to investigate the entire subject diligently and report its recommendations.

Mr. R. Beckett, a well-known lumberman of Quebec, P.Q., who went overseas early in the war, and after taking part in several engagements was wounded and returned to England, has been appointed in connection with the purchasing of lumber and lumber supplies for Great Britain. At the present time the lumber used in the United Kingdom is being handled through a government office. Mr. Beckett has been sent to the United States in connection with this work and will have an office probably in Washington, so as to be in close touch with the War Purchasing Commission of the United States.

Widely Marked Change in Eastern Output

How Material Used for Shipbuilding Has Come to the Front—Very Few Deals for English Market Will Be Cut—More Lumber for American Market

By E. Woodworth, Parrsboro, N. S.

The world war has wrought many important changes in the world's commerce, but none has been more marked than the change that has been effected in the lumber trade between Great Britain and the Maritime Provinces.

The change was gradual during the first years of war, but developed an increased demand and advanced prices. Even then transportation soon became a difficult problem, and to meet the demand a class of vessels had to be introduced which had hitherto been regarded as unsuitable for ocean carriers. Those vessels proved far more satisfactory than was generally anticipated, and the phenomenal increase in freight rates made their employment in the transatlantic trade very profitable to their owners. Their success contributed largely to the revival of wooden shipbuilding, for in some sections fleets of tern schooners, with an occasional four-master, were built expressly for the deal-carrying trade. This prosperous business, however, was of brief duration, for early in 1917 the deal trade with England was hedged around with conditions which became practically prohibitory. The questions of demand or supply had nothing to do with the matter; for deals were urgently required in England and there was and is an abundant stock on this side of the water. The deal trade was suspended for the simple reason that the shipping available for that business was more urgently needed for other purposes.

The Mother Country needed our lumber and needed it badly, but she could do without it much better than she could without food stuffs and munitions. Lumber shipments could wait without serious loss or injury, but the other requirements from this side of the water were imperatively needed, consequently as there was not sufficient tonnage to meet all demands, the lumber shipments were greatly reduced and finally had to be suspended altogether. The normal shipments of deals and scantling from Nova Scotia to England in recent years have been about one hundred and fifty million superficial feet. The shipments last year were not more than twenty per cent. of that amount, and the most of them were made early in the season. Some of the lumber intended for the British trade found a market in the United States, but it is estimated that the quantity remaining on hand is in the vicinity of a hundred million feet. Much of this was sold, even before it was cut, to the Imperial Government for delivery last winter and spring, but it has been held over until now for lack of tonnage, and there is no prospect of any immediate improvement. In New Brunswick the conditions are much the same as in this province, and the quantity of lumber on hand is probably larger than it is here. According to present indications the deal shipments from the Maritime Provinces to the United Kingdom are likely to be a negligible quantity for many months to come.

A comparison of the exports to the United States last year from the various ports of Nova Scotia in comparison with 1916 cannot be given in this article, but the statistics of the port of Parrsboro are here submitted and will give a fairly accurate idea of the changes that have taken place within two years.

American Market Was Satisfactory

The exports of lumber, scantling and plank from Parrsboro to the United States last year totalled 10,001,900 superficial feet, valued at \$177,657. The exports in the same lines of lumber in 1916 aggregated 4,707,666 feet, and their value was estimated at \$72,890. It will be seen that last year's exports along the lines specified more than doubled the amount exported the preceding year, while the valuation was much more than twice as large. In laths there was a marked falling off last year, for the exports totalled only 7,058,700, against 9,063,000 in 1916. The advance in prices helped to even things up somewhat, for last year's valuation was \$21,654, against \$24,151 for the exports of the preceding year. But it was in piling that the widest divergence was found, for the number of pieces exported last year was only 9,605, valued at \$21,653, while in 1916 the number was 23,790, and the valuation \$45,114. Even with the falling off in lath and piling the exporters had no cause for dissatisfaction, for their trade with the United States last year brought in upwards of seventy thousand dollars more than their transactions of the preceding year. Notwithstanding the excessive freight rates the American market was highly satisfactory to lumber operators in Nova Scotia and the owners of Bluenose coasters profited greatly by the abnormal prices they were able to secure for carrying the lumber to American ports. There is,

however, another side to the story. The deal shipments from Parrsboro to England in 1916 aggregated a little less than thirty million feet—the smallest annual shipment in many years. The reduction in quantity was caused by the scarcity of bottoms—not by any lack of lumber, and it was hoped and believed that the coming year would bring improved conditions. But all the deals shipped from Parrsboro to England last year were included in one cargo of a little over four million feet, carried by an Imperial transport sent over for the express purpose. In this case the shipper was unable to take advantage of a rising market, for the deals were bought many months before they were delivered, while at least six millions more, bought at the same time from another shipper, are still on hand and will not be moved until next spring at the earliest. This makes the outlook for next season somewhat dark, for there is little encouragement to get out lumber for a market which may remain closed, while the wharves are still piled with last year's output.

Even if a good market were assured for next season it would be impossible now to get out as many deals as were usually handled in other years. The great advance in wages and the largely increased cost of supplies of all kinds might be overcome—might, and no doubt would be treated as part of the game, but the men to do the work are not to be had. Many of them went to the front long ago, and some of them will never return. Many others have since joined the Forestry Brigade and are felling the forests of England and France, thus lessening the urgency of the demand for Canadian lumber. And last, but not least, very many are now engaged in shipbuilding, or in getting out timber and other material for building ships.

Taken altogether, our forest output is not likely to be greatly reduced, but its character will be largely changed. Very few deals suitable for the English market will be cut, but considerable quantities of other dimensions will be manufactured for the American market. Probably more boards and scantling will be cut than in other years, and at least an average output of lath and piling may be expected. But it will be in material used for shipbuilding that the most widely marked change will be seen.

The Impetus in Ship Building

Large quantities of lumber of various kinds were used in building the vessels that were turned off last year, but the amount will seem small when compared with what will be required to finish the fleet now in course of construction and to build the others that are pretty sure to be commenced before the season is over. Much of the timber used in building ships is of a kind that cannot be converted into merchantable lumber, and, before the revival commenced, was considered of little value except for fuel. Within two or three years the value of this timber has greatly appreciated, and trees which have hitherto been rejected are worth more to-day than the best growth of the forest would bring before the building boom began. Even as fuel our forest products have doubled in value since the war commenced, and the fortunate owners of timber limits will have little cause for complaint if they are compelled to allow some of their trees a little more time to grow. No doubt some timber owners, in their eagerness to realize on their property, have cut their holdings closer than was really profitable, and an enforced rest will permit a growth that will pay good dividends in the end.

There is every reason to believe that Canadian lumber will be wanted at good prices when the war is over, if not before, and the chief risk of loss will be from forest fires—a risk that, with proper precautions, should be reduced to a minimum. It is true that the falling off in the deal shipments from New Brunswick and Nova Scotia, which is said to have amounted to one hundred and eighty-five million feet last year as compared with the year before, is a matter of serious importance to these provinces, and undoubtedly keeps a lot of money out of circulation. But it can't be helped and it might be much worse. If a normal cut of deals were wanted this year it would be impossible in the present condition of the labor market to get men enough to make it, and all the men who can be had can find plenty of employment. Probably more lumber will be cut for the American market than ever before, and if there should be a demand for deals before the season is over, there are enough on hand to fill it.

A list of the vessels built in Nova Scotia last year may prove interesting in this connection, as showing what became of some of the forest products. One four-masted schooner of about 700 tons reg-

ister was launched, and there were thirty-one tern schooners which averaged nearly 400 net tons each. The number of two-masted schooners was twenty-five, and these averaged a little over one hundred net tons each. Then there were ten gasoline boats and schooners averaging from ten to forty tons, and a large fleet of smaller craft with or without motors. Many additions to the latter class are made every year, and, with the exception of the boats and dories required for the vessels launched last season, it is probable that the output last year was not much larger than usual.

The vessels in course of construction and to be launched this season, as announced at the end of last year, were eleven four-masted schooners ranging from five hundred tons or thereabouts, up to about one thousand tons. Arrangements had been made at the beginning of the year to build forty tern schooners this year, but some have been added since and probably others will follow. This will undoubtedly hold true of two-masted schooners, for although only ten had been promised when the year began, it is very likely that, at least, double that number will be turned off. Plans have also been made for half-a-dozen gasoline vessels of various sizes, and several wooden steamers will be built. One firm which has operated quite extensively for many years in Cumberland County and formerly built vessels here, will manufacture fully one-third of its output this season into shipbuilding material. The firm are building no vessels in Nova Scotia this year, but they have two tern schooners on the stocks in New Brunswick. These vessels are well advanced, and arrangements are being made for putting on a four-master. Probably some of the lumber from the firm's mill in Nova Scotia will find the way to its vessels in New Brunswick.

Lost Art Being Restored

The figures given above are small and paltry when compared with the present and promised shipbuilding activities of our neighbors, and

they are really of little value except to indicate the change that has been made here within two or three years, and to show what becomes of a part of our lumber output. But it must not be forgotten that the population of Nova Scotia is less than half-a-million and that the principal occupations are farming, fishing and mining. It should also be remembered that before the war shipbuilding, once a leading industry, was rapidly becoming a lost art. When the revival came it did not extend to all parts of the province, and many shipyards that were once hives of industry still remain silent and forsaken. In many of the yards that have been reopened the changed conditions have rendered necessary the erection of large sawmills, and these, while providing shelter for modern labor-saving machinery, have helped in a small measure to extend the home market for lumber. Thus, in various ways, the revival of shipbuilding has created a home demand for lumber which in former years could only be sold by shipping it to other countries.

The injunction "Don't ever prophesy unless you know," would, if generally heeded, prevent the making of many predictions concerning the outcome of the lumber operations for the current year. The number of those who are qualified to prophesy because they "know" must be exceedingly small, and yet some good guesses may be made. Predictions regarding some important features can be nothing but guesswork, but there are other things which may be foretold with a fair degree of certainty. For instance, there is no doubt that the regular lumber output in this province will be much smaller than usual, and it is fairly certain that very few deals will be cut for the English market. On the other hand, there is good reason to believe that more lumber will be manufactured for the American market than ever before. More lumber will be used for shipbuilding than in any other year since this century began, and the filling of this new demand will help very materially to make up for the temporary loss of the overseas trade.

B. C. Lumbermen Enjoying Great Prosperity

Aggregate Cut of Mills for 1917 About 1,500,000,000 Feet—Log Output Approximates 1,600,000,000 Feet—Estimated Value of Forest Products \$46,000,000

Whilst the years 1910-11-12 witnessed a bumper demand for B. C. forest products owing to the tremendous boom in building then in progress throughout Western Canada, the prices secured by the millmen left much to be desired. This was due very largely to the competition set up by American lumbermen, who shipped enormous quantities of lumber into the prairie provinces in those years owing to a diminishing market in their natural territory.

There was plenty of export business to be secured, but only a few coast mills cared to cut for this trade, and Eastern Canada was not then absorbing any large quantities of B. C. lumber. Wisely or foolishly the British Columbia manufacturers reached the decision that they should hold the prairie market at all costs, and in the carrying out of this resolve prices were gradually forced below the cost of production, while credit was extended to all and sundry. In 1913 there came an end to the period of real estate expansion throughout the prairie provinces which left the bulk of the prairie farmers in straightened circumstances. The fore part of the following year saw very unsettled conditions in the B. C. industry and a general desire on the part of the millmen to await the declaration of prairie harvest prospects before making their plans for even an average cut. In August came the shock of war, following which depression of the blackest hue settled upon the industry for several years, both the fortitude and the credit of the lumbermen being strained to the utmost.

Statistics of output for the years 1913-14-15 will convey some idea of conditions. In 1912 the value of British Columbia forest products for the first time reached a total of over \$35,000,000; for 1913 the figures fell to \$33,650,000, and in 1914, to \$28,680,000. A slight improvement was noted in 1915, the total value advancing to \$29,150,000. The year 1916 brought a materially strengthened demand and better values for lumber owing to a heavy crop on the prairies selling at war prices, while the establishment of shipbuilding yards at the Coast and the growth of Eastern Canada shipments were reassuring factors which gave new hope and imparted fresh vigor to everyone connected with the B. C. industry.

Good in Spite of Drawbacks

The year just closed was one of marked prosperity in every branch—this, notwithstanding, the many serious drawbacks facing the operators in the way of labor shortage, transportation difficulties and steadily mounting costs in every department of their work. Luckily

the demand for lumber was so insistent that the manufacturers were able to ask and obtain fair prices for their product, and in turn to pay the loggers considerable more money for the raw material. We probably are safe in making the statement that despite the drawbacks referred to our lumbermen have sound cause to think well of 1917 and to be satisfied if future profits measure up with its record.

While the increases in lumber prices have not kept pace with the operating costs, the better business methods put in force during the hard times led to economies that are now firmly established with many millmen and have enabled most of them to make more clear money than ever before. While the Department of Lands has not yet been able to give the official figures it is believed the total cut of lumber in 1917 was approximately 1,500,000,000 feet, the output of the Coast mills being about 1,000,000,000 feet, the balance being produced by the Mountain mills and the many small plants scattered through the interior. Owing to the higher prices obtained the total value of the 1917 output of forest products will be in the neighborhood of \$46,000,000, or over \$10,000,000 better than for the year preceding—a splendid showing. Nearly 80,000,000 feet of high-priced ship material was taken by Coast shipbuilding plants and Eastern yards, and offshore lumber shipments accounted for about 45,000,000 feet, in the carrying of which B.C.-built wooden schooners played a large part. In 1915 the offshore shipments were 58,074,773 feet, and in 1916, 43,676,523 feet, the falling off being due to lack of bottoms owing to war exigencies. The stocks of lumber carried by Coast mills at the end of 1917 were considerably in excess of normal, owing to the large quantities of side lumber produced while cutting ship material, and also because the car scarcity had held back the shipment of large orders placed by prairie and Eastern Canada buyers. As the cut of many mills will likely be devoted to spruce almost entirely during the present year the surplus of fir stocks will be needed to piece out rail orders, and millmen are so well satisfied with the situation that big orders offered by line yards are being turned down and shipments for future delivery are subject to price advances in some cases.

The cut of the association mills in the Mountain district for 1917 was 315,000,000 feet, an increase of 50,000,000 feet over 1916. Sales during the year at enhanced prices were 300,000,000 feet, or 30,000,000 less than for the year previous. At the end of the year the mills were carrying 85,000,000 feet, or 15,000,000 feet in excess of the stocks on hand at the beginning of 1917. The gross value of the output of

the mills in the Mountain territory for last year is placed at \$6,000,000, while the cut of fence posts, poles and shingles will add another million to this total. With favorable freight rates to the prairies and an assured demand for the class of lumber on hand the Mountain mills are in a strong position for the spring trade. This is borne out by the fact that a number of the mills are endeavoring to operate continuously during the severe winter weather in order to add to their stocks, and all of them are logging on a much larger scale than heretofore.

Coast Loggers Had Prosperous Year

While a number of the big lumber companies at the Coast control extensive areas of timber limits, only a few of them operate camps. The great bulk of the tidewater sawmills and shingle plants purchase their logs in the open market, the supply coming from camps along the Coast as far north as the Queen Charlotte Islands, although most of the timber is cut within a distance of 300 miles, this taking in all points on Vancouver Island, where a large cut is supplied. The end of the year saw a small surplus of logs on hand instead of the customary 30,000,000 or 40,000,000 feet usually stored to keep the mills cutting from mid-December until near the end of February, when most of the camps have to suspend work owing to severe weather and snow. Fortunately the present winter has been so mild that many of the operations are still being carried on, and logs are being produced in good quantity.

It is estimated that the total log output for all sections of the province in 1917 will reach 1,600,000,000 board feet. How log production has been speeded up despite many drawbacks is made plain by the figures for previous years. In 1915 the total of logs scaled was only 991,780,200 feet, and the year following 1,279,852,662 board feet.

Below we give the log cut of Vancouver district for 1916 and 1917, showing a gain of 6,920,397 feet. Vancouver Island, Prince Rupert district and interior lumbermen also increased their output by substantial figures.

Month	1916	1917
January	25,807,000	49,669,768
February	25,249,000	33,929,937
March	30,381,000	49,476,212
April	45,176,000	61,657,534
June	76,450,000	77,112,990
July	77,496,000	66,344,926
August	71,897,000	84,433,383
September	68,493,000	59,073,000
October	91,502,000	88,433,000
November	57,181,000	62,210,000
December	80,409,000	107,915,647
Total	733,329,000	740,249,397

It is confidently predicted that the year upon which the industry is now entering will be even more prosperous than 1917 owing to the giving out of contracts for aeroplane spruce in almost unlimited quantities. Considerable spruce timber was logged last year, but the campaign was merely being initiated—now the full effects of the plans formed are being made plain, and they involve a tremendous expansion of the logging industry. It is possible the value of spruce aeroplane material taken out this year will reach \$9,000,000, and as much higher as the operators care to go. In order to expedite production the provincial government has thrown open all spruce areas, and the Imperial Munitions Board will buy all the clear stock that is passed by its inspectors. While most of the good spruce is found in the northern part of the province, there are some good stands on the West Coast of Vancouver Island and at various points up the Mainland Coast, and doubtless all of these will be developed. Many of the present loggers of fir and cedar will turn over their equipment to the new work and it remains to be seen how this transfer will affect the output of fir lumber and shingles. In all probability a number of new fir and cedar camps will open up to balance the situation.

Shingle Manufacturers Smash Records

Last year proved a remarkable one for B. C. manufacturers in the way of demand and output. As in the other branches of the industry, the shingle men found that higher labor and other operating costs bit deeply into the mill price of their product, yet the demand held up well all year and from time to time they were able to stiffen their figures somewhat. The total cut of the B. C. mills for 1917 of all grades of shingles was 2,278,205,000, the market value f.o.b. mill being \$7,609,854. Of the total quantity the United States market absorbed the record quantity of 1,411,420,378 shingles, valued at \$5,182,856, while the Canadian trade took 866,785,000, valued at \$2,426,998. That records were broken is established by the figures for 1916, when the total output of the B. C. mills was 1,236,427,000 shingles, valued at \$4,050,078. It will be seen that 1917 shipments to the United States exceeded by nearly 200,000 shingles the entire shingle output for 1916.

Below we give the figures of the United States shipments per quarter, and steadily rising values:

	Shingles	Value
March quarter, 1917	265,991,021	\$ 856,926
June quarter, 1917	408,958,185	1,533,390
September quarter, 1917	314,066,454	1,172,084
December quarter, 1917	422,406,718	1,620,456
	1,411,420,378	\$5,182,856

The outlook for 1918 is considered to be excellent owing to the gradual revival of building operations in the extensive territory served by B. C. red cedar shingles.

Larger Demand for Logs in B. C.

Supply Curtailed by Labor Shortage — No Encouragement Given to Aeroplane Spruce Production

"Regarding a review of the logging business for the past year on the Pacific Coast, we have had many surprises, the principal of which has been a labor supply, practically normal, in number at least, and an increasing demand for logs at advanced prices," writes a live western logging firm. "Prices, of course, had to advance in proportion to all material and supplies and advanced wages, but on January 1st, 1917, speaking for the trade in general, it looked as though not more than half of the camps could operate on account of the apparent labor shortage. However, the Provincial Government became more lenient in the immigration of labor, and we got by the year fairly well.

"It is hard to predict conditions for the year 1918. We don't plan these days, we guess and speculate and live from day to day, not knowing what to-morrow will bring forth, but our judgment is, from the indiscriminate conscription of labor for soldiers that we will be very short of men in the camps this year, at least, it would look as though all who will be left will be aliens of a not very intelligent or loyal type.

"The aeroplane spruce production bid fair to interest the logger some two or three months ago, but as time goes by and nothing definite is placed before us, we have had to drop back to our regular business, very much disappointed at not being able to do our bit along those lines. Possibly the Imperial Government will realize after a while that a Pacific Coast man, who does not need several months' education and who has the confidence of his fellow business men, is the man for the job, and just that soon and no sooner will a large supply of aeroplane spruce start for France.

Unusual Conditions—Streaky Demand

B. F. Harris, Prince Albert, Sask.

B. F. Harris, sales manager of the Prince Albert Lumber Company, Prince Albert, Sask., in reviewing conditions for 1917 and the probable outlook for the coming year, says:—"Spruce lumber manufacturers of Northern Saskatchewan were faced in 1917 with unusual conditions in their entire production from tree to car. While the volume of business was about the same as in previous years, the demand was streaky, and during the last four months of the year considerably below normal.

"Bush operations were conducted under trying labor conditions, due to scarcity of men and generally decreased efficiency of those employed, while wages averaged higher than in former years.

"In sawing, yarding and planing departments the summer season brought increased wages in all lines and steadily decreasing supply of labor. Collections throughout the year were good—probably

above normal, and, on the whole, considering we are at war, there is little complaint heard.

"The business outlook for 1918 is fair—demand for spruce products is steady, but much uncertainty exists as to labor conditions. That there will be a big shortage is inevitable, and particularly in skilled lines, and if this condition develops there will be a considerably decreased production."

What Forest Protection Means to Civilization

The War Has Shown the Value of Our Forests in an Entirely New Light—Necessity for a Practical and Far-sighted Policy

By Ellwood Wilson, Grand Mere, P.Q.*

Ellwood Wilson, Grand Mere, P.Q.

Forests and civilization are inseparably bound together. Not all forested countries have reached a high degree of civilization, but no unforest country has ever reached a state of culture. Egypt, Babylon, and Assyria may be mentioned as exceptions, but the probability is that they were all forested at the zenith of their progress, and that their decline may be directly attributed to the disappearance of their forest wealth. The whole north coast of Africa, Palestine, and China were at one time well forested, and, with the vanishing of the trees, these civilizations waned and are now at a low ebb. China is probably the best example of deforestation which we have. Originally a country of great wealth, both in timber and agricultural lands the removal of the woods has, over

very large areas, destroyed the farms by allowing the rainfall to rush down the hillsides in the form of torrents, carrying large amounts of sand and gravel, which have covered up and destroyed the arable lands. To-day China is a desolate, treeless country, forced to use dung for fuel, and to carry on the most intensive form of agriculture in order to wring a meagre sustenance from an impoverished soil.

Where timber is removed from hills and mountains by lumbering, fire almost always follows and burns not only the timber but also the soil, right down to the rock. If the formation is not rock the situation is far worse, for the soil is washed down year after year into the fertile valleys, destroying them completely. In the Cevennes and Pyrenees districts in France 8,000,000 acres of farm land were destroyed by floods, and a huge sum of money had to be spent by the government in reclaiming them. Where forests are removed in sandy country the wind soon strips the soil of the meagre remaining cover and carries the sand for miles over the surrounding country, converting it into a desert. This happened along the west coast of France, and millions were spent to arrest the devastation. An old friend of mine, Senor Don Ricardo Codorniu, a Spanish forester, has spent his life in this work of stemming torrents, replanting denuded mountain slopes, often carrying earth up on mule-back to start the nucleus of a future protective forest. His work in connection with drifting sands has been most interesting, especially where the sand had commenced to invade a village, burying houses in the suburbs. Wattle fences had first to be built, and between these pines were planted, and when the sand had piled up against the first line of fence this had to be raised to prevent the little trees from being buried before they could fulfil their function. Nor do we have to go so far afield to see the results of axe and fire. Travel west on the C.P.R. through Ontario; take the Canadian Northern to Lake St. John, or the National Transcontinental to Winnipeg, and see the blackened waste which should be one of our greatest tourist attractions. On the Lievre River there is a large tract of country where the hills are of white quartz. Fire has passed over it and the rain has washed away the burnt soil, and to-day, seen in summer, from a distance, they look like snow-capped peaks. There is another hill of this character at Riviere a Pierre Junction, on the Q. and L. St. J. R.R. At Lachute, Que., and along the line of the C. P.R., near Berthier Junction may be seen the drifting sands which have swept over several square miles of once fertile country, turning it into a desert. Fortunately, our progressive Minister of Lands and Forests, the Hon. Jules Allard, through his chief forester, Mr. G. C. Piche, has begun the work of checking this menace, and at Lachute has planted a large area with beech, grass, and young trees to hold back the devouring sand.

Many New Uses Made of Wood

Few people have any idea of the magnitude of the industries dependent on our forests. Practically everything that enters into our

daily life is made of wood or partly of wood, and new uses are being discovered daily. Just to mention a few, we now have made from wood pulp, string, cord, and rops, furniture, milk bottles, water-pipes, electrical insulation, and carpets. Some of the by-products from wood pulp manufacture are chloroform, fat for frying, a binder for roads, foundry cores, and briquetts. You are all familiar with the reports that Germany is using wood pulp for munitions, to replace absorbent cotton, and for cattle feed. Silk is now made from wood pulp, and probably many of us are wearing socks and ties made from this material. Clothing of excellent quality has also been manufactured, not to be distinguished from wool in appearance, and warmth, lighter, and cheaper, besides being

equally durable. In the near future such clothing will probably be quite commonly worn. In the last United States census returns the value of agricultural products is five billion dollars; iron and steel, one and one-quarter billions; lumber, pulp, and paper, one billion; and cement, sixty-three millions; so that the lumber, pulp, and paper industries stand third. If to these should be added manufactures of wood products, such as articles manufactured from wood, chemical products of wood, naval stores, and the numerous other things made from wood, the total would be much higher. In the number of laborers employed the lumber industry stands first, so that its prosperity is of vital importance. In addition to the manufacturing industries, the products of farm wood lots through the country yield \$195,000,000 per year, yielding thus for our farmers lumber, fuel, fence material, and maple sugar and syrup. The per capital consumption of wood in North America is very close to 350 cubic feet per annum, in England 13 cubic feet, and in Germany 43, so you see how much more dependent we are on wood than the Europeans. The figures for Canada are relatively the same as those for the United States.

A question which has been little thought of until last winter is the entire dependence of Canada on the United States for anthracite coal, and to some extent for bituminous. We have coal in Nova Scotia and in British Columbia, and some lignite in the Prairie Provinces, but the cost of transportation is very high. In case of a shortage of cars, or should the United States need all its own diminishing supply, or—worst of all, which God forbid!—should there ever be war between the two countries, one winter would spell ruin to our industries and untold hardship to our people. Thousands would then be absolutely dependent on our forests for their existence.

The Romance of Our Forests

The history of the forests of various countries is full of interest. The ancients cut off their forests and the nations died. In Europe in the middle ages the supply of fuel wool, coal being unknown, began to worry the far-seeing men, and a system of conserving the forests was put in operation, careful cutting, forest regulation and planting, together with closer utilization. At first the forests were esteemed as game refuges, and belonged exclusively to the kings and greater nobles, and the forester was practically a game warden. To some extent this is the case to-day in Germany, where the trees in certain forests have to be protected by little steel crowns to keep the deer from eating the tips, the deer being of more importance than the trees. As the people began to learn the importance of the forests, better plans for their management were inaugurated, so that they were handled for what is technically called a sustained yield, which means that they can be cut for ever, without depleting the capital stock. Another interesting development, and one worthy of emulation by us, was the municipal or communal forest. There is at least one town in Germany to-day in which there are no taxes, all the expenses of running it being paid by the receipts from its forest.

The effect of forests on climate is very marked. They moderate

Hon. Jules Allard, Quebec.

*Paper read before the Woodlands section at fifth annual convention of Canadian Pulp and Paper Association, in Montreal.

the climate and equalize the rainfall. It is always warmer in the forest in winter than outside and cooler in summer. I had a very good illustration of this when driving through the County of Champlain just after the first snow this year. In the open the ground was frozen hard and covered with snow, but in passing a stretch of forest along one side of the road for about half a mile the snow was all melted and the ground not frozen. Forests serve to break the force of the wind, and windbreaks on our prairie farms have been of great value. The C.P.R. on the prairies has begun to plant trees along the right-of-way to replace the unsightly snow fences with which you are all familiar. The trees are better for protection, and, once established, do not have to be renewed like the costly board fences. Forests, by storing up the rain and retarding the melting of the snow, regulate the runoff to our streams and rivers and prevent floods and equalize the flow throughout the year, thus being indispensable for our navigable streams and water-powers.

Measurements made in Ontario and other places show that as the forests are cut off the difference between extreme low and extreme high water increases. The growing dependence of this country on its water-powers emphasizes the need for conserving our forests. They are also necessary for the watersheds of the streams or lakes from which our cities and towns draw their water supplies. The United States Government, under the Weeks Act, is buying up large tracts of land and turning them into perpetual reserves on the head waters of all navigable streams. Of the aesthetic value of woodlands there is little need to speak. A landscape without trees is, indeed, a dreary spectacle, and does not attract tourists. We all love to spend our vacations in the forests, where we obtain a rest and a renewing not to be had in any other surroundings.

The recreational value of forests is becoming widely recognized, and is assuming a larger place in our national life. The establishment of sanatoria in forests is part of the policy of the great States of New York and Pennsylvania. These two states have also used their forests as recreation grounds, and the sentiment in favor of this Adirondack Reserve is so strong that all efforts to permit the cutting of even the dead and down trees have been defeated. The Algonquin National Park, the Dominion Parks in the West, and the Yellowstone and other national parks in the United States all show the growing sentiment in favor of the preservation and free use of our scenic regions, made beautiful by their forest cover. Switzerland, probably the most democratic country in the world, derives a large proportion of her revenue from people who come to see her wonderful scenery. Here the government regulates the use of the forests and designates as protection forests those woodlands lying on steep slopes, which, if cut, would cause serious erosion or spoil the beauty of the scenery. Even privately-owned forests have been placed in this category for the public good.

Value of Forests in Present War

This war has shown us in an entirely new light the value of forests in war. Without her own forests and those of the occupied parts of France and Belgium, Germany would never have been able to hold the allies at bay for so long a time, nor would our own soldiers have been able to make their wonderful advances. Our Canadian Forestry Corps is supplying 200,000,000 board feet of timber per month for construction purposes at the front and hundreds of thousands of ties for the railways. Immediately our infantry have pushed back the enemy, our engineers construct small narrow-gauge railways, which take up the light field guns, ammunition, and supplies to the new line, to be followed in turn by the meter and standard-gauge roads, which take up the intermediate-weight guns and the "heavies" to repel the Boche counter-attacks. Without this quickly available supply of timber our pushes would be much less effective and our losses by counter-attacks very much heavier. All honor to the French foresters who, far-sightedly, provided this splendid store of timber for France's hour of need; and even now they are cutting as carefully as they possibly can, for they realize that trees cannot be grown in a year. In England, where forests were almost wholly looked upon more as additions to the landscape than of any practical value, and where suggestions for reforestation of waste lands were looked upon with apathy, the trees have been almost all cut off, and centuries will be required to repair the waste and bring back the beauty of the trees to the English country. All that I have said is to impress upon you the necessity for a sound, sane, practical, and far-sighted policy for our greatest natural resource. Forests take generations to become established and to produce merchantable timber. Most of the trees which are supplying our wood to-day have taken nearly two hundred years to grow, so that it is imperative that we should begin at once to provide for their replacement. Even now we are at a crucial stage.

Our forests, far from being inexhaustible, will be exhausted in from 35 to 75 years, depending on the species which are used. Our Canadian oak, once famous in England for shipbuilding, is hardly a commercial tree to-day; our white pine, probably the wood of greatest general utility, is almost gone from Quebec, and the only big areas are now in Northern Ontario; and all our stocks are menaced by the

white pine blister rust, for which, so far, no remedy has been found. Stands once attacked are doomed. Spruce, which once was practically the only wood used in pulp and paper manufacture, has now receded almost to second place, balsam fir, an inferior and relatively short-lived species, taking its place. If I told you that in this wonderfully wooded country of ours there was almost a shortage of firewood; that wood for fuel was bringing from \$8 to \$12 per cord in the small country towns and larger cities, wholesale, and that wood was being sent by rail to markets thirty miles away, you would scarcely credit the statement, but this is an actual fact. I may explain, however, that this is due to local shortage, as the transport of wood is very expensive, and that we have large stores of firewood untapped. But the point is that there should always be an abundant local supply of firewood in a properly managed country, from farmers' wood lots.

Progress of Forestry in Quebec

We in Canada are very fortunate in that our forests for the most part remain in the hands of the Dominion and provincial governments, and are only leased for operation. This makes the formulation of a rational policy easy and its enforcement merely a matter of an order-in-council. Will you allow me to point my remarks by citing the situation in Quebec. The situation is practically analagous in all the provinces, but I am more familiar with our local conditions, and, on the whole, I think our province is in the van of progress. Sir Lomer Gouin saw about fourteen years ago the necessity for a new policy, and, picking out two young men, sent them to Yale to be trained technically, then to Europe to study conditions and policies there, and then gave them a pretty free hand to improve things. A forest school for the training of men for the government service was established, a forest nursery developed, and a land classification scheme was also put in train. Mr. Piche, the chief forester, has been in charge of this work and has made many improvements, ably aided by the minister. Here I wish again to pay a tribute to the Hon. Jules Allard, who has shown himself a conscientious administrator of the forests of Quebec, a man of public spirit and vision, and with the courage of his convictions even in the face of political opposition. As you perhaps all know, the timber lands of the province were originally laid out in blocks of 59 square miles each, called "limits," and the right to cut on these was sold to the highest bidder, whose lease, while annually renewed, is really a perpetual one. On payment of an annual rental of \$5 per square mile per annum, the lessee is permitted to cut trees of certain sizes fixed by law, for which he pays the government a stumpage tax of 65 cents per cord. He is responsible for the protection of the lands against fire. Previously the government charged a fire tax and looked after the fire protection itself; but, owing to political patronage and the want of proper supervision, this service was so inefficient that, on petition of the license-holders, the fire protection was turned over to them and the fire tax abolished, the rangers chosen by the lessee being made government officers.

The Co-operative System of Protection

The situation under this system was little improved until about five years ago the large licensee companies got together and organized a co-operative system of protection, under which every timber owner, on payment of $\frac{1}{4}$ cent per acre becomes a member and his limits are protected. A board of directors of the members chooses a manager, who runs the forest protection independently, like any other well-managed business, with a force of inspectors and rangers under him. The St. Maurice Forest Protection Association was the first one to be formed, and the results of its work have been gratifying. In 1913 it extinguished 306 fires, at an expense for extra labor of \$13,000. It had 17 fires set by railroads, 17 set by river-drivers, and 151 set by settlers. The season just past the figures were: Fire extinguished, 217; set by railroads, 122; set by drivers, 5; set by settlers, 4; cost of extra labor, \$1,000. This shows the advantage of efficient, practical, modern methods over political ones, or those used by men whose interest is in some, to them, more important line of work. Three years ago the Ottawa Association was formed, and this year the Laurentian and St. Lawrence Associations have been organized, and they are all federated in the Quebec Fire Protection Association, which covers practically the whole area of the province under license. Lookout towers for the detection of fire have been constructed, telephone lines built, motor speeders, some of them equipped with powerful gasoline pumps, patrol the railways and Ford cars patrol the roads. Where there are no roads passable by autos, motorcycles and horses are used, and in the woods men in canoes. Aeroplanes are projected, and will be put into use at the earliest possible moment.

Unfortunately, the desire to increase the number of its inhabitants has made its forest policy an anomalous and somewhat disastrous one from the forestry standpoint. You are all familiar with the system of laying out lots in this country. The country is laid out in counties, and these are divided into rectangular townships, each of which is further subdivided into long, narrow lots, about one mile in length by

some 800 feet in width, and containing approximately 100 acres each. These are laid out utterly regardless of the topography of the country or the nature of the soil, so that, for instance, a man may get a lot which is cut in two by a lake, or which has a few acres of arable land at one end and all the rest may be a rocky hillside. The land is sold cheaply, and the settler is required to clear a certain number of acres each year and to build a house and barn. At the end of a few years the settler, having complied with the conditions, obtains the freehold of his land. The system is, apart from the layout of the lots, a good one but for one thing—the timber limit owners have bought their rights in good faith, but the government has retained the right to place settlers anywhere it sees fit, thus depriving the licensees of their property, without compensation. To be sure, they have a year from the first of May to remove the timber allowed to be cut by law, but the settlers, knowing this, take out their lots at a time of year when it is practically impossible to cut the timber. And here, we may state, that the reason why timber can only be cut above a certain diameter is not for the benefit of the forest, but of the settler, so that he may have timber for his uses. Then, too, the settler turns around and sells the timber back to the licensee, and sometimes, though not so frequently as formerly, timber speculators get settlers to take out lots simply for the timber that is on them, and, after cutting it, abandon the lots. The present minister has set his face against this and much reduced the evil, but the policy needs to be changed.

The Proper Classification of Soils

The most important point is the need for proper land classification into agricultural and non-agricultural soils, and no settlement should be allowed at all on the latter, and this has been begun by the Department of Lands and Forests. Fertile valleys occur in many places where lots conforming properly to the terrain could be laid out and sufficient land on the slopes for timber for the settlers' seeds should be added. The poverty-stricken small settlements and individuals and the abandoned farms to be seen are eloquent witnesses to the faults of the present system and the wasted effort in clearing up a few acres of poor soil, from which a few meagre crops are obtained, is an injustice to the settler and a detriment to our forests. In selling lots the government should compel the purchaser to keep, at least, a quarter of his lot in woodland, so that he could have wood for himself for all time. This was done by Sir Joly de Lotbiniere in selling lands on his seignory. He was one of the first to see the necessity for forest protection and was a wise and far-sighted man. Would that we had many more like him!

The time has also come when the cutting regulations should be brought in line with up-to-date forestry practise. The government receives somewhere in the neighborhood of one million six thousand dollars in revenue from its forests, and its appropriations for forestry work are only sufficient to cover its school and administrative work. They should be increased to allow for better supervision of the forests and for scientific studies of the best methods of utilizing and conserving them. We have a good minister and a good forester; give them the money to work with.

There is one very important factor in the conservation of our forests which must not be overlooked. Unless the people who cut and manufacture the wood from our forests can get a fair return for their money they cannot afford to use the forests as anything but mines to be worked until the supply is exhausted. The proper handling of lumbering so as to preserve the growing stock for future use; the burning or other disposal of debris from logging; proper fire protection, and reforestation, all cost money and increase the cost of the product. These things are absolutely necessary for the good of the country, and the ultimate consumer must be educated to do his part and pay a higher price for all things made from wood as a part of his patriotic duty and share with the lumberman and pulp and paper manufacturer the cost of this work. If the government undertakes to regulate the price of wood products without regards to these items of cost it will be at the peril of its forests, and will be a very short-sighted penny-wise policy.

There is only one salvation in this matter, as in all others. - People must be educated to the necessity of a better forest policy. We must teach our public men, the man in the street, and the children in the schools. We must acquire a new "civic sense and responsibility." The support of a democracy is an enlightened people, and we must learn the lesson of the war—to bear each his share of the burden; to act unselfishly for the good of all—"when none is for the party, but all are for the state."

Should Not Use Forest as a Mine

The reading of the paper was followed by a discussion, the subjects referred to including the newsprint situation, arbor days, the standing of Quebec in conservation work, and wastage in lumber.

Replying, Mr. Wilson spoke of the importance of the lumbermen and pulp and paper makers obtaining a profit from their work. This was bound up with the question of conservation. Unless the lumberman received a profit he was tempted to use the forest as a mine, tak-

ing out all the possible material and returning it to the government in barren condition. As to reforestation, Mr. Wilson mentioned that the Laurentide Company had 600 acres under plantation, with an output of millions of trees per annum. The experimental area was the largest in Canada, and the company had offered this to the Government of Canada for use in connection with the Forest Products Laboratories. Mr. Wilson also referred to the work done by the Canadian Forestry Association in bringing pressure to bear on ministers, to the elimination of patronage in forestry work, the inauguration of a good fire protection system in Ontario, and the efforts being made to bring New Brunswick into line. They were asking the Quebec Government to enact a law under which every person who went into the forests should be compelled to obtain a free permit from the nearest fire ranger. The pulp and paper companies in Quebec Province were producing commodities which involved cutting over 55 square miles every year, but, on the other hand, some concerns were doing their best to reforest the country. The Province of Quebec stood first in the matter of conservation, British Columbia coming second.

Aeroplanes for Fire Prevention Work?

Mr. Ellwood Wilson presided at the annual meeting of the St. Maurice Forest Protective Association, held on February 7, at the Windsor Hotel, Montreal. He stated that the season just past, while in the main wet, had enough dry weather to be dangerous, and more than the average number of fires. The reduction in the cost of extinguishing fires by extra labor was a good index of the efficiency of organization. This cost was \$13,004 in 1914, \$7,329 in 1915, \$2,759 in 1916, and \$1,011 during the season just passed. The association was doing the patrolling cheaper than any other protective agency in Canada.

Mr. Henry Sorgius, the manager, reported that 217 fires occurred during the season, of which 56 per cent. was due to railways. The area patrolled belonging to the members was 8,049,645 acres, or 12,578 square miles, and over 1,000,000 acres of government land not under license and lots taken out by settlers, also 229,800 acres handled for the Laurentian Forest Protective Association. The cost of operating was less than one-third of a cent per acre.

The accounts showed a balance of \$1,280.

The members discussed in detail the question of employing aeroplanes for fire prevention work, and a committee was appointed to secure further data as to the practical use of aeroplanes and the cost of machines.

The following officers were elected:—President, Mr. R. F. Grant, St. Maurice Lumber Company, Three Rivers; vice-president, Mr. Charles Le Brun, Belgo-Canadian Pulp and Paper Company; directors, Messrs. J. M. Dalton, St. Maurice Paper Co., Three Rivers; Ellwood Wilson, Laurentide, Ltd., Grand'Mere; Thomas E. Mack, Brown Corporation, La Tuque; H. Dansereau, Three Rivers; Frank I. Ritchie, Wayagamack Pulp & Paper Co., Three Rivers.

Good Business in Shoepacks

The Palmer-McLellan Shoepack Company, of Fredericton, N. B., report an unusually active demand for their larrigans and shoepacks, which are well and worthily known to the lumber trade in all parts of the Dominion. The leading characteristic of the lines of this firm is the "Chromoil" quality, a new tannage which gives the toughness of rawhide and yet retains the suppleness of calf. Every good point in connection with oil-tan is imparted to the larrigans of this firm, which possess exceptionally strong, durable and wet-resisting qualities. The Palmer-McLellan Shoepack Company are also featuring for summer use farm shoes, a neat, light covering for the foot that gives ease and comfort. The boot has the seam on the outside and not only fits well, but wears well.

Relating to Grading Rules

A resolution in regard to grading rules was passed at the recent meeting of the Canadian Lumbermen's Association in Montreal, submitting the rules under consideration back to the Executive Committee of the Association.

Henry Sorgius, Manager St. Maurice Forest Protective Association

Canadian Lumbermen Once More Convene

Decide to Establish War Service Board—Will Co-operate with Federal Government in Furnishing Lumber and Timber Products to the Allies

W. Gerard Power, the newly elected President

The tenth annual meeting of the Canadian Lumbermen's Association was held at Montreal on February 6 and 7, and was much the most important and successful meeting in the history of the association. The attendance was large and the members discussed the various matters under consideration very fully, resulting in valuable conclusions being reached and important steps taken toward making the association even more valuable to members in the future than it has been in the past.

Probably the most important event of the meeting was the passage of a resolution relating to the desire of the association to co-operate with the government in connection with the furnishing of lumber and timber products to the allied governments. This resolution grew out of a discussion of the

importance of co-operation between the industry and the government. The mover of the motion was Mr. George H. Holt, of the Holt Timber Company, of Chicago, who have large interests in Northern Ontario, and the seconder was Mr. Walter C. Laidlaw, of Toronto.

The resolution was worded as follows: That this association establish a war service board, and that, through this association, the lumbermen of Canada tender their services and their industry to the government, and petition the government to accept such war service board as their representatives to carry out the purpose tentatively outlined in the paper entitled "Feeding the Lumberjack," read before the association by Mr. Holt.

It was the intention of the meeting that the precise wording of the resolution be altered to some extent from the above.

Another resolution, to some extent dealing with a similar subject, was moved by Mr. W. Gerard Power, Quebec, and seconded by Mr. J. C. Bartram, Ottawa. This resolution referred to the possibility of peace negotiations developing during 1918 and making it necessary for members of the association to take immediate steps for closer co-operation with their friends and allies in Europe and in the United States. Therefore, it was resolved that the association should appoint a special committee of three, with power to add to their numbers, to be known as the Joint International Committee, with power to discuss any matters affecting the lumber trade with any official, committee, or other body that may be appointed for similar purposes, and to report the result of their deliberation to the Executive Committee of this association. The objects sought being the prevention of waste, the conservation of effort and of natural resources, the elimination of unnecessary conflict of interests, whether in production or distribution, and, generally, to promote mutual and reciprocal relations which shall have the object of achieving the greatest good for the greatest number.

Mr. Power Elected President

The election of officers, which took place at the conclusion of the second day's meeting, resulted in W. Gerard Power, St. Pacome, P.Q., being selected by the new board of directors to fill the position of president during the current year.

The other officers selected by the board were:

First Vice-President—D. McLachlin, Arnprior.

Second Vice-President—Walter C. Laidlaw, Toronto.

Executive Committee—The president, two vice-presidents, and Messrs. W. M. Ross and P. C. Walker, Ottawa, and A. E. Clark, Toronto.

The directors for the present year were chosen by ballot as follows:

From Ontario—W. E. Bigwood, Toronto; Duncan McLaren, Toronto; D. McLachlin, Arnprior; Walter C. Laidlaw, Toronto; R. G. Cameron, Ottawa; Gordon C. Edwards, Ottawa; P. C. Walker, Ottawa; and A. E. Craig, A. E. Clark, J. G. Cane, and W. M. Ross, Toronto.

From Quebec—W. Gerard Power, St. Pacome; A. H. Campbell, Toronto; G. W. Grier, Montreal; William T. Mason, Montreal; Alexander MacLaurin, Montreal.

From New Brunswick—Angus McLean, Bathurst.

From Saskatchewan and Manitoba—Sir D. C. Cameron, K.C.M.G., Winnipeg.

From British Columbia—E. C. Knight and E. W. Hamber, Vancouver.

The proceedings of the first day were opened by the reading of a letter from Mr. H. H. Hettler, of the Herman H. Hettler Lumber Company, Chicago. After expressing regret at not being able to be present, the letter was, in part as follows:

"The necessity for association has never been made more apparent than during these critical times. Co-operation is helpful in every way to the government, the industry, and the individual. In our opinion, one of the most important subjects to be considered is the classification of the different lines of our business. For example, the manufacturer, the wholesaler, the yard man and the commission man, all are beneficial to the trade, and a failure to recognize this results in injury to the individual and consequently to the industry. We extend our best wishes for a successful and pleasant meeting. If any resolutions are offered wherein the resources of the lumbermen are extended to the allies for the purpose of enabling them to the utmost extent to continue to a most vigorous prosecution of the war to a successful finish in all its phases, so that the day of peace may be hastened, count us in."

The president, Mr. W. E. Bigwood, of Toronto, then delivered his address, as follows:

When a youth reaches the age of 10 years he is passing the meridian of one of the important divisions of his career. Life, generally, is taking on a new aspect, and the serious side begins to suggest itself and temper future action.

So with our association, ten years old, with any amount of spirit and energy that is capable of good development, and from its component parts especially fitted to do splendid things.

A year ago I was a little disturbed over general conditions. Our membership had materially decreased. Our financial statement presented a debit balance, and the whole atmosphere surrounding our association seemed charged with a depressing and possibly a deterring influence.

But to-day we have every reason to take heart, and, with renewed energy and determination, begin the work of another year. Our membership, while not so large as could be desired, is near the one hundred mark. Our finances, due to the good management of our secretary, are in splendid condition, and there seems to be the general desire to be doing.

We all appreciate the spirit of unrest that controls to-day, and every one of us is trying to obtain some light, some guidance, as to where our duty lies, and what we should do to take our part as citizens. I desire to say a few words as to association and organized work.

Extraordinary Demands on the Industry

For years there has been more or less of a tendency toward organization and association effort in every industry, with varying degrees of success and failure, but, to pass judgment on the merits of the different cases would necessitate a mass of detail that would prove irksome and of little interest. The main point is this: Each one of us to-day fully realizes that the extraordinary demands made upon our industries has brought about a condition never before experienced and an expansion never before attempted or thought possible. Of course, the war has been the cause of this, but nevertheless we are

W. E. Bigwood, the retiring President

trying to accomplish just a little more in individual effort; and if at one time we are contented, we immediately wonder if something additional cannot be done, and the attempt is made at once. Under these conditions it is natural that associations have started up in different places with the view of betterment to all concerned. This to my mind is perfectly natural and praiseworthy. It is the close touch, the getting together at lunch, or meetings of the few or several, pre-arranged or accidental; the exchange of ideas, the discussion of general trade topics, that has brought about the desire to burst the individual shell and reach the higher plain of co-operation for betterment, expansion, and accomplishment.

All this tends to develop the best that is in the trade, and is bound to afford a larger degree of protection for all concerned.

With local organizations well in hand, it is but natural that there will be an increasing need for the larger association to handle matters of legislation, transportation, insurance, trade ethics, and all other subjects in more than a local way.

Do not think that I expect a modern Utopia, or that every lumberman will wear a halo. As long as the world stands there will be imperfections, but I do claim that association will make many corrections, broaden the influence, and be a potential force in the industry at large and also in public affairs.

The advance position is what our association should take, and at times it should be true that any effort on our part carries with it a power and force that is bound to be respected. On several occasions during my term as president I have been told by those high in authority, that information on different subject, furnished by our secretary, has been of the greatest value and the most reliable.

This is as it should be, and I think the time has come when we should be so organized that we can be of still greater help and assistance to the individual member and also to different localities. We should be so strong that, instead of our seeking members, membership would be sought, and that it can be said the Canadian Lumbermen's Association is worthy of every support.

To accomplish this only one thing is necessary—the hearty co-operation of each member. Give the same interest and support that you do to the local association. Supply the sinews of war both in money and service. Remember, also, that it is not for one day, but every day in the month, and every day in the year, that your loyalty is required.

Mr. R. G. Cameron, Ottawa, read the treasurer's report, showing a small balance on the right side.

Mr. J. G. Cane, Toronto, suggested that the membership fee of \$35 was too small and that it should be raised to \$75, and that a credit bureau should be attached to the association.

Mr. Hawkins stated that he had prepared an estimate of expenditure needed in connection with proposed development of the work of the association. This estimate was from \$6,000 to \$5,500. The association had reached a point where it ought to be reaching out, which would necessitate further clerical assistance. It was desired that the association should work in closer co-operation with the government. There was plenty of room for extending the membership. At every annual meeting resolutions had been passed to increase the membership; committees had been appointed and serious efforts made to this end. Every lumberman in the country benefited either directly or indirectly from the work of the association, and ought to be members.

Executive Committee's Report

The report of the Executive Committee was, in part, as follows:

Different departments of government have referred many matters to the association, such as sources of supply of different forest products. Birch and ash veneers, cedar poles, etc., together with repeated enquiries as to lumber supplies for the allies.

Information has been furnished by the association to the Commission of Conservation, the food controller's office, etc.

During the year some hundreds of freight cars intended for pulpwood principally, owned by a private despatch line in the United States, were held at the border for duty on the cars. The assistance of the association was sought, and the result was the securing of an authorization from the commissioner of customs to allow free entry into Canada of these cars during the period of the war.

In the Legislature of the Province of Quebec there was introduced a bill named the Rivers and Streams Act, which was calculated to work seriously against lumber operations in that province. Steps were taken, and several of our members operating in Quebec joined a deputation which only recently waited upon the minister, and it is expected that a satisfactory adjustment of the trouble has been reached.

Keeping before us the conservation of our natural resources during recent years in the Province of Quebec, there have existed several forest protective associations. All of our members should be tremendously interested in this work. The Executive Committee, therefore, has taken a keen interest in the matter.

The secretary was instructed to appear before Judge Masten in Ottawa in opposition to the imposition of any tax on the premium of

insurance placed in unlicensed companies. Canada's fire loss still assumes considerable figures—two millions and a quarter a month.

Canada's annual fire waste is sufficient to pay 5 per cent. interest on all the war loans floated in Canada and provide a sinking fund large enough to cancel the total indebtedness in thirty years.

One year's fire loss in Canada would purchase 12,000,000 bushels of wheat for our allies.

The value of grain and other agricultural produce burned in Canada in 1916 was equal to the average annual production of 1,500 hundred-acre farms.

The association has rendered very considerable assistance to the Military Service Council, and at the same time accomplished most valuable concessions for the lumbermen.

The association was called upon by Lieut.-Col. J. H. White, D.S. O., for a gift of socks for forestry battalion overseas. A number of our members contributed money, with the result that so far 110 dozen pairs have been sent across. Any additional subscriptions may be forwarded to R. G. Cameron, honorary treasurer for this fund, 16 Castle Building, Ottawa.

During the year we have had a number of applications for copies of grading rules, which were presented to you at our annual meeting in 1912. The adoption by this association of the rules then submitted would not bind any member unless he either bought or sold subject to them. Having gone so far in the matter, it would seem a pity to allow any other body to adopt the rules to the exclusion of the Canadian Lumbermen's Association.

We doubt if labor conditions have ever been so difficult.

The questions arising through transportation difficulties, embargoes, car shortage, lack of locomotive power; then the various matters argued before the Board of Railway Commissioners—demurrage, minimum carload weights, and finally the percentage increases in freight rates allowed, and the very serious condition regarding ocean tonnage, all have had a tendency to create in the minds of shippers a very pronounced feeling of uncertainty that in numerous instances have caused serious inconvenience and considerable loss.

The increased cost of supplies has had a marked effect upon the business of the year. The income war tax and business profits war tax and in the Province of Ontario the new regulations regarding the Forest Protective Service have each created conditions never before experienced.

Although other reports will deal specifically with some of the above matters, we are led to refer to them at this length because your Executive Committee feels that it has a distinct duty to perform in this connection, and that is to urge your very earnest consideration as to what steps the Canadian Lumbermen's Association is going to take in order to be prepared for drastic changes whenever the war shall come to an end.

We suggest the formation of active and energetic committees at three or four points—men who would devote some time and their undoubted talents to the study of various problems as they present themselves, discuss them, and then periodically our secretary could visit each of the groups and bring the messages as to what other groups in different parts of the country were doing, what they were thinking, and in this way there would be co-ordination and earnest and enthusiastic co-operation all through.

What will be the immediate effect in Canada whenever peace is declared? The figures of our expanding foreign trade bewilder and intoxicate. It will need men of iron nerve and far vision to find a solution, otherwise complete collapse may result.

The membership of the association is now 97 and the subscription is \$35 per member. If the association is to render adequate and effective service, members can no longer ignore a distinct obligation. It is certainly not fair to the secretary to expect him to struggle along under such conditions, as in crippling the service, efficiency is correspondingly reduced. If a program as outlined above is carried out—and we most urgently trust that something of the kind will be done—it cannot be done on anything like the basis we have worked on for the last two or three years. We feel that it is only necessary to point this matter out to our members and that the remedy will be suggested and put into effect. The association has blazed the way. It has weathered all storms, and to-day stands the mouthpiece and representative of the most important industry in Canada. It has work to do, but there must be earnest co-operation on the part of every member.

Transportation Committee's Report

Mr. A. E. Clark, Toronto, read the report of the Transportation Committee, which was, in part, as follows:

During the past year several very important and far-reaching subjects have been before the Board of Railway Commissioners, and your committee constantly had before them these matters, with, we consider, fair results to both the railways and lumber interests.

Demurrage

A year ago we reported that, in accordance with the board's order, No. 174, dated December 23, 1916, the free time on lumber shipments

was cut down from 72 hours to 48 hours and the demurrage charges after the expiration of the free time made as follows: For the first day, \$1 per car per day; for the second day, \$1 per car per day; for the third day, \$3 per car per day; for the fourth and each succeeding day, \$5 per car per day, effective from January 1 to April 30, 1917.

This was the subject of further hearings before the Board of Railway Commissioners, and by general order No. 201, effective August 20, 1917, the following conditions were imposed so far as lumber shipments were concerned: Free time: Forty-eight hours from first 7 a.m. (not being a Sunday or holiday) after placement. After the expiration of free time demurrage charges to be as follows: \$1 for the first day or fraction thereof; \$2 for the second day or fraction thereof; \$3 for the third day or fraction thereof; \$4 for the fourth day or fraction thereof; \$5 for the fifth and each succeeding day or fraction thereof, with allowances for wet or inclement weather. Under Rule 6 provision is made for the full free time allowance where cars are bunched either for loading or unloading.

Reciprocal and average demurrage were not dealt with in the order by the board, and can be taken up after the declaration of peace.

Circular letter No. 154, issued by the Board of Railway Commissioners September 19, 1917, reads as follows:

"War conditions interfere with car movements. The weather conditions of winter last year increased the congestion, and the coming winter may repeat this. Additional freight cars can be obtained only with great difficulty. Prompt deliveries of new rolling stock do not exist.

"If each freight car does more work, the difficulty can be faced and overcome. A freight car saved is a freight car gained for extra service. More service per car equals more cars in service. If all shippers load to full capacity or, better, to 110 per cent. when practicable, car shortage will largely disappear.

"Railways, by cutting out road delays and by improved handling in terminals, can make each car do more work.

"Prompt and heavy loading of cars give more service per car. So also does prompt release of cars. Consignors and consignees are interested in getting cars. Their co-operation in efficient car handling will help not only others but themselves as well."

Railway Act Amendments

In January, 1912, the Prime Minister stated in the House of Commons that the government had under consideration a revision and consolidation of the Railway Act passed in 1903. At each annual meeting of this association held up to and including February 6, 1917, a resolution embodying the views of members regarding this matter, without addition or amendment thereto, was passed. Prior to the late session of parliament a special committee of the House of Commons was appointed to submit a new railway act. Our secretary attended the meetings of this committee and urged the adoption of the principle that where any tariff which had the effect of increasing rates or abrogated previous conditions which custom and usage had built up, the onus of proof thereof to be on the railway companies, to justify the proposed increases, and should not be on the shipping public to prove why such increase should not be allowed. The point was finally agreed to by the committee, and the lawyer who had the matter in hand was instructed to draft a clause and submit it. This, however, for some reason was not done, and it was announced that the clause had been passed and no change could be made. Acting under instructions, your

secretary asked for a re-hearing, which, after considerable delay, was granted. A number of prominent Ottawa shippers appeared before the committee, and again the committee agreed to the proposed amendment, and instructions were issued for the railway committee's legal representative to confer with the legal adviser to the board, Mr. Blair, and draft a clause. Again the matter was ignored, and the bill was reprinted without the proposed amendment. However, subsequently, at our suggestion, the Minister of Railways and Canals moved that the clause be inserted, and the bill sent to the Senate, where it was carefully watched all the way through. Parliament, however, unfortunately died by the effluxion of time, and the bill did not become law. We refer to the matter at this length to impress upon members that the principles urged by the Canadian Lumbermen's Association were practically unanimously accepted by the special committee of the Commons, the Railway Committee of the Senate, and the House of Commons in committee, and also to call attention to the importance of being able to watch, day in and day out, such necessary legislation. We suggest that this matter should be the subject of your very careful consideration, and that a resolution covering the matter should be passed at this meeting.

Ocean Freights

During 1917 ocean freight for lumber was practically not obtainable, and, while this was a serious factor in our export trade, and will be until conditions in this respect change, it is so essential that ocean tonnage be conserved for foodstuffs and other more necessary war products that the export lumber trade must, of necessity, bear therewith to the best of its ability. Especially will this be apparent when Britain and our other European allies must rely on North America for the bulk of their essentials on account of the shorter steamship haul than from other available sources of supply.

15 Per Cent. Increase in Freight Rates

It is not necessary to trace this matter from its inception. Suffice it to say that many hearings were held by the Board of Railway Commissioners at various points, and that finally general orders Nos. 212 and 213, dated Ottawa, January 18 and January 19, 1918, respectively, were issued. The judgment in the case bearing date December 26, 1917.

Rates on lumber west of Fort William are advanced between the different groupings, the effect being practically to increase all rates 15 per cent. On shipments from west of Fort William to points east thereof the increase is to be 10 per cent. over former rates, while east of Fort William all rates are increased 15 per cent. Fractions up to .24 to be disregarded; from .25 to .74 to take $\frac{1}{2}$ c., and from .75 up to take the full cent above. Your association did not appear in opposition to the application. According to the judgment and order of the board, the effective date of the new tariffs is to be not sooner than February 1, 1918. Since the above order was issued an appeal to the Privy Council has been had, and the matter is now entirely out of the hands of the Board of Railway Commissioners. The Privy Council has made the effective date March 15 meanwhile, but there is no certainty that this will not be rescinded, or the Privy Council may disallow the application of the railways entirely. As this application is made under the War Measures Act, your transportation officials feel that some provision should have been made in the orders of the board stipulating the date when the increased rates would expire and rates revert to those in

A. E. Clark, Toronto

P. C. Walker, Ottawa

J. G. Cane, Toronto

R. G. Cameron, Treas., Ottawa

DIRECTORS OF THE CANADIAN LUMBERMEN'S ASSOCIATION

existence prior to the adoption of the new tariffs. The onus of making application for this reversion should not be on the shipping public.

Minimum Carload Weights

The railway companies filed tariffs increasing the carload minimum on export shipments, effective April 23, 1917. Before this tariff came into effect, at the suggestion of the chief commissioner, your representatives arranged to meet the railway people so as to avoid, if possible, making formal objection, and asking that the case be put down for a hearing. Mr. George Fowler, lumber agent for the Canadian Pacific Railway, came to Ottawa on May 3 and again on May 16, 1917, and figures maintaining our position were put before him. Many attempts were made by your representatives to obtain a settlement of the matter, but without success. Meanwhile the railway companies filed tariffs with the board increasing the minimum on domestic shipments also, and on July 11 we wrote to the secretary of the board, desiring to be made parties to the protest against the continuance of the tariffs. The hearing took place July 17.

After the hearing July 17 officers of the board visited various yards for the purpose of inspecting and reporting on actual loading conditions, but the shippers and receivers of lumber freight paid excess charges meanwhile. The result has been the issuing of an order reducing the proposed increases. This order has already been published in the Canada Lumberman.

One good feature obtained has been a ruling by the board as to what constitutes loading to full capacity. We quote from the judgment of Commissioner McLean:

"The difficulties in the way of obtaining a uniform loading are recognized. The weight that can be loaded into a particular car varies with the density, seasoning and dimensions. A check made showed that 'shorts' 6 feet to 11 feet in length, loaded into a 36-foot car had a loading of 45,600 pounds. On the other hand, with lumber 12 to 16 feet in length, it is impossible to load three lengths of lumber end to end in a car 36 feet long."

And again, to quote from order No. 211:

"The term 'full capacity' to permit a space of 12 inches between the top of the load and the carlines or rafters of the car."

The effective date of new tariffs was not later than January 1, 1918.

As a result of these very considerable increases the shipping public have a right to expect a great increase in efficiency and service on the part of the railways, even under the stress of war conditions which now exist.

The Secretary's Report

The secretary's report referred to the necessity on the part of all Canadians preparing to meet after-war conditions by organizing various industrial groups, such as the lumbermen. The report suggested that some machinery within the association should be established by means of which the fullest information regarding the lumber business could be secured from everyone in the trade promptly and regularly, the details, of course, to be kept private, so that no individual or firms interested would be made to suffer.

Matters of particular interest regarding the work of the association during the past year were left by the secretary for full explanation in the reports of the different committees.

Mr. C. W. Wilkinson, Toronto, moved the adoption of the report; this was seconded by Mr. D. McLaren, and carried.

Mr. Campbell, of the Forest Products Laboratories, Montreal, in inviting members to visit the premises, pointed out that lumbermen had hitherto not shown great interest in the work, probably because they were not aware of how the institution could help them. The chief part of the work had been connected with the pulp and paper industries; but the laboratories were anxious to help the lumbermen, and the only way to do this effectively was to get lumbermen to submit their problems to the laboratories.

Workmen's Compensation

At the afternoon session, Mr. H. I. Thomas, Chairman of Group One, of the Lumbermen's Safety Association, Ottawa, read a paper on "Workmen's Compensation."

In the course of his address Mr. Thomas said that all workmen's compensation legislation and, indeed, every possible scheme of workmen's compensation, must and does fall under one of three heads, viz.:

1. Individual liability.
2. Collective liability.
3. State liability.

In the first system, illustrated by the English law, that of the Province of Quebec, as well as the acts of several of the American states, the employer pays individually for the accidents to his own men. He is permitted to contract himself out of such liability by insurance, and in England such form of insurance is very general. A distinction, in passing, may here be drawn between accident insurance, whereby an employer insures his workmen against the financial consequences of accident, and liability insurance, whereby an employer insures himself against the claims of his men for compensation in the case of accident.

Mr. Thomas then outlined in a general way the different kinds of systems referred to. The third system—that of state liability—was illustrated by the Workmen's Compensation Act of Ontario, which, however, also combined some features belonging to the second system—that of collective liability. Before giving a sketch of the Ontario Act, Mr. Thomas outlined the features which any such measure should possess, as follows:

1. Accidents should be lessened in number, and the act should tend toward their prevention.
2. Compensation should be provided for every accident, however arising.
3. The compensation should be paid periodically, and not in a lump sum.
4. The measure should cover all classes of wage-earners, including domestic servants and agricultural laborers.
5. The payment of such compensation should be certain, not dependent upon solvency of the employer, and should be obtainable without legal process, which should, in fact, be barred.
6. The burden upon the employer should be as light as possible, so that large sums of money should not be rendered inactive and tied up in reserve funds.

It was only right, Mr. Thomas said, to say that the Ontario Act possesses many excellent features and meets in most respects the conditions which, as already stated, should inhere in a satisfactory measure of this kind. It provides for the payment of compensation

DIRECTORS OF THE CANADIAN LUMBERMEN'S ASSOCIATION

periodically in all cases of accident, and it eliminates all opportunity for legal contest over claims made thereunder. It also prohibits the practise of contracting out of the liability of any form of insurance. These are, in his judgment, excellent features. The system of grouping industries is not in itself vicious, but the grouping in the Ontario Act has not been carefully done, so that, in many cases, industries possessing widely different hazards are grouped together and pay the same rate. The rate of compensation, which is 55 per cent. of the lost earnings, is, while high, not unreasonable, and no objection should be raised to the assumption by the employer of the medical care of an injured workman. The act does not, however, cover injuries to agricultural laborers or to domestic servants, and that is a serious defect. Neither does it tend greatly, or perhaps at all, toward the reduction of the number of accidents, whilst it imposes on the employer a financial burden vastly greater than the benefits accruing to the injured workman. Due to the insistence of a committee of manufacturers, a recent amendment provides for merit rating, by which individual industries which exhibit a high accident rate will be penalized, and, per contra, those presenting a favorable accident balance sheet will obtain a lower assessment rate. The administration of the act by the board, of which Mr. Samuel Price, formerly a lawyer of St. Thomas, Ont., is chairman, has been good in its intention, but extraordinarily autocratic in its methods. The cost of administration, which, after infinite trouble on the part of the employers, has been at last, and we hope finally, made a change on the general consolidated revenue of the province, seems to us high, but it is difficult to criticize without more exact knowledge than we are in a position to obtain.

Outline of Proposed Amendments

Mr. Thomas then outlined proposed amendments to the act which he thought that lumbermen should endeavor to have enacted. In the first place, they should, in spite of the expressed opposition of the chairman of the board, continue to agitate for the adoption of the current cost plan. He meant that deferred payments should not be capitalized and a huge reserve fund thus built up. We know the arguments that can be, and have been, advanced against the current cost plan, and Mr. Thomas was aware that, in the case of some groups of industries it could not safely be adopted; but the lumbermen do not comprise such a group, and it is little short of scandalous that large sums of money should be withdrawn from our industries long before their expenditure is required, and placed in reserve funds, which may never be needed. That money should be kept liquid in the industries of Ontario; and, although under a current cost system the assessment rate would inevitably advance from the initial minimum until it reached its maximum, some twenty-five years hence, we could afford to face that contingency with brave hearts were we assured, as we should be, of an immediate and substantial reduction in our present contribution.

Secondly, we should ask for a provision such as is contained in the act of the State of New York, whereby corporations giving satisfactory evidence of financial stability can elect to stand outside the group in which they would naturally fall and pay individually the actual amount of the compensation awarded their injured employees. Such a provision would be of immense and immediate benefit to most lumbermen, many of whom pay in their assessments three or four times the amount received by their men as compensation.

Thirdly, the provisions of the medical aid amendment should be so changed as to place the doctors under the direction of the employers, who are paying their bills, instead of under the control of the board, which is not in a satisfactory position to judge of the merits of each case. It would be quite proper that the board should have the power to interfere and take such action as seemed necessary in cases where the medical care and hospital accommodation provided by the employer were not considered adequate or satisfactory.

Fourthly, there should be a power of appeal from the decisions of the board to a judicial tribunal. This power of appeal might, perhaps, be limited to cases where a principle is involved, and the leave of the appellate tribunal should be required in advance.

Fifthly, the safety associations should be removed from the control of the board, under which they have fallen, and should be so constituted as not only to prevent accidents, but to act as a body representative of its group of industries and capable of appearing before the board and the appellate tribunal in that capacity.

Sixthly, the objectionable "seven days clause" should be changed to eliminate the constant malingering which now takes place, and to remove the temptation to an injured employee to remain away from his work sufficiently long to bring him under the compensatory provisions of the act. This desirable change could be effected by making the seven-day waiting period absolute, or even by granting compensation for the exact period of disability, however brief that might be.

Mr. W. B. Maclean, Toronto, enquired how the reserve was being piled up.

Mr. Thomas replied that he believed that it was about three million dollars, and this amount would be increased for about twenty-five

years before the fund reached the maximum. Germany had been obliged to make changes in its legislation because of the immense reserves which had been piled up.

On the motion of Mr. Laidlaw, seconded by Mr. McLaren, it was agreed that the executive be asked to take the necessary steps to bring the question of amending the act before the lumbermen of Ontario.

A paper on "Feeding the Lumberjack," by Mr. George H. Holt, of Chicago, followed. Mr. Holt's paper, in detail, is published elsewhere in this issue.

Wide Powers of the Banks

One of the resolutions adopted during the afternoon session of the first day was an important one, moved by Mr. W. J. Lovering, of Toronto, and seconded by Mr. Duncan McLaren, Toronto. The resolution was as follows:

"That this association appoint a committee, or, if preferable, instruct the executive and secretary to take the necessary steps to procure legislation to more clearly set forth the power of banks to take security from retail lumbermen, under section No. 88 of the Bank Act, and particularly to designate clearly what constitutes a wholesale purchaser, shipper, or dealer, as a recent decision given by a prominent judge practically places every little retail dealer on the list as a wholesaler."

In speaking to this motion, Mr. Lovering said:

"I feel that perhaps an apology is due the large manufacturer for taking up his time with this question. He sells his stock en bloc to the wholesaler; therefore, is not interested in the details and workings of the credits of retail lumbermen. But it is of vital importance to the manufacturer or wholesaler, or any person selling direct to the retail trade, to have it clearly defined whether the banks of this country have the right to loan and take security as they are now doing, under section 88 of the Bank Act, on lumber piled in retail yards and the product of planing mills put up to sell to the retail trade, thereby getting security which does not have to be registered not only on lumber in the yard but other lumber being shipped in. In late years any of us selling to the retail trade who have been unfortunate enough to meet with losses usually find at the first meeting of creditors the bank steps in with a hypothecation of all book debts and lien, under section 88, on all lumber in the yard, manufactured or partially manufactured stock. In other words, they have inside security on every dollar of liquid assets the firm possesses. The said security at times is given months before we have sold the lumber or shipped to the customers. The bank takes possession, leaving us, who have perhaps supplied the lumber only a short time before, to take second place and come in for what is left after the bank has been satisfied, or more frequently allow the banks to clean up while we sit back and get nothing.

"The Banking Act was, I understand, amended a few years ago, and I am not in a position to say whether any person in connection with this association was consulted or not. Perhaps our interests might conflict, as some of our members, I understand, are directors in banks and heavily interested in the same. Therefore, they would not support the contention that they should take an equal chance with the other creditors. However this may be, I feel that this association should take steps to have the act made clear and definite. We, I think, all agree on what a wholesale dealer is. Our judges appear to interpret things differently, and usually in favor of the banks. I have the opinion of a prominent lawyer, given some years ago, which coincides with my ideas exactly, but since that time a man in a little village in Western Ontario got into financial difficulties, and the bank, as usual, stepped in with its claim. It was contested—*Rowson vs. Northern Crown Bank*. It was carried to the Supreme Court of Canada, where it was again decided in favor of the bank, the Hon. Mr. Justice MacLaren giving his opinion that this man, while not perhaps a wholesale dealer, was clearly a wholesale purchaser, owing to the fact that he had 200,000 or 300,000 feet of lumber in his yard and bought in carload lots. I have a copy of the appeal case, which announces that the man, while admittedly selling retail to farmers and others and using material from his yard on contracts, etc., was a wholesale purchaser within the meaning of the act because of his buying in carloads. I would like to point out that all retailers do and must buy their lumber in carlots. Perhaps getting a number of different kinds on a car, but still, for freight and other reasons, they must buy carlots. These, I maintain, are not wholesale purchasers or dealers in any sense of the word, and should be excluded from the working of the act, and I suggest that the word 'purchaser' be left out of the act. Looking closely into the effect of this legislation and the way the banks are handling it and the judges interpreting it, it appears to be the most unjust piece of legislation that could possibly be put into effect. The bank is upheld in loaning money and taking security on the stock of lumber in a retail yard or any article into which it is manufactured, and to take hypothecation of the accounts of parties to whom it is sold, and also, in addition to this, to hold any lumber or other material which may be shipped into the party's yard to replace what has been taken out and manufactured

or otherwise, and hold prior claim on that to the man who has supplied it and has not been paid for it."

Mr. A. C. Manbert, Toronto, was of opinion that the act was never intended to apply in the way in which it had been interpreted. He able to step in and take lumber to pay for debts contracted a long period before the lumber was purchased.

Mr. Laidlaw agreed with Mr. Lovering and Mr. Manbert. It was a serious matter for the members, and he hoped that the committee would be able to obtain a solution of the problem.

Mr. Cane gave an instance of how the decision adversely affected lumbermen, and said the time had come when this sort of thing should be stopped and the lumber firms able to get some security for the lumber sold.

The resolution, seconded by Mr. McLaren, was passed.

The resolution regarding a war service board, presented by Mr. Holt, was considered and carried at this stage of the meeting.

A resolution was also carried that the next annual meeting should be held at Ottawa.

Association Development Encouraged

A resolution, moved by Mr. Walter C. Laidlaw and seconded by Mr. David McLaren, was carried, as follows:

"That we recognize with satisfaction the formation of different associations throughout the country having largely to with credit rating, and are ready to co-operate with them on questions appertaining to the general welfare of the lumber business in line with our constitution, clause II., which reads as follows: 'The objects of the association are to promote the interests and conserve the rights of those engaged in lumbering operations, or in the manufacture, sale, or distribution of lumber, to protect its members against unbusinesslike methods in the wholesale and retail lumber trades; to foster such trades and reform abuses therein where they exist; to secure freedom from unjust or unlawful exactions; to diffuse accurate information among its members; to secure uniformity in usage, custom, and trade conditions.'"

New Rates Should Prevail Only During War

A resolution was carried, moved by Mr. John S. Gillies, Braeside, Ont., and seconded by Mr. J. G. Cane, Toronto, to the effect that the 15 per cent. increase in freight rates having been granted by the Board of Railway Commissioners as a warring measure, should only continue during the period of the war, and that the Board of Railway Commissioners should have included in the order a stipulation to this effect, so that the rates would revert at that time to those in existence prior to February 1, 1918. The resolution also stated that the onus for having to make an application for such a reduction after the declaration of peace should not be placed upon the shipping public.

On motion of Mr. W. M. Ross, seconded by Mr. W. J. Lovering, the work of the Transportation Committee during the past year was approved and the opinion expressed that freight operating expenses should be kept separate from passenger and other operating expenses. The same resolution suggested that the Executive Committee should arrange for proper presentation of the views of the association before any committee of the House of Commons, Senate, or joint committee of both.

Conference on Transportation Problems

At the afternoon session of the second day an important conference was held between the members of the association and Mr. W. R. MacInnes, freight traffic manager of the C.P.R., and Mr. A. A. Hatton, car service superintendent for the C.P.R. The conference consisted entirely of a discussion of present transportation problems, and the chief point brought out was the fact that the C.P.R. cannot encourage lumber shippers to expect anything in the way of important improvement in shipping conditions until after the severe winter weather has passed, or, in other words, until after the middle of March at the earliest. Mr. MacInnes and Mr. Hatton stated, moreover, that undoubtedly similar conditions would prevail in connection with all the other railroads of Canada and the United States.

One of the chief difficulties experienced by the railroad companies in connection with the scarcity of cars was the result of the adverse balance resulting from the interchange of cars between Canadian and United States points. Mr. Hatton stated that at present the Canadian Pacific Railroad had a balance against it of some 10,000 cars in the United States. This meant that the number of Canadian Pacific Railroad cars in the United States exceeded the number of foreign cars in Canada by 10,000. Moreover, they had been helping out other Canadian railway companies in order to supply cars for grain, and there was a balance against them in Canada of about 9,000 cars.

So far as Canadian shipments are concerned, Mr. MacInnes reported that they were getting fairly good results, and believed they could promise that this condition would continue.

A lengthy discussion took place as to how the railroad companies and the lumber shippers could co-operate in bringing about better results and how they could work together in connection with urging the governments at Washington and Ottawa to give the shipment of

lumber the consideration to which it was entitled because of the fact that so large a percentage of the shipments of lumber are for war purposes. The discussion did not bring out anything of a very definite nature along this line, except that by the appointment of a committee or the establishment of a war service board the machinery for work of this nature would be provided.

The discussion also dealt with the decreased efficiency of the car-tracing departments of the railways, but the representatives of the railways were only able to promise that they would do the best they could in regard to this work, which was heavily handicapped by the shortage and inefficiency of office help.

The discussion concluded with a vigorous statement by Mr. A. C. Manbert, who said that the lumber industry to-day was in a very serious situation from a standpoint of distribution, and urging the railroad representatives to realize that their desire in connection with the conference was that railroad companies should appreciate the earnest wish of the shippers of lumber to work together with the railroad companies as effectively as possible in assisting to get the products of the industry forward from mill to destination.

At the afternoon session a vote of thanks was passed to the Montreal committee of the association for the excellent arrangements they had made in connection with the annual meeting.

After a lengthy discussion it was decided that, in order to increase the membership of the association, every member should do his utmost to bring in a new member, and the fees should be placed at \$40 per annum for old members and \$25 for the present year for new members. The former membership fee was a straight \$35 per member.

Some discussion followed in regard to eligibility to membership in the association, and this was left to the incoming executive.

The Annual Dinner Was Enjoyable

The annual dinner of the Canadian Lumbermen's Association was held at the Windsor Hotel, Montreal, on Tuesday evening, February 5. Mr. W. E. Bigwood, president, occupied the chair. There were a large number of members present, and the function was graced also by the attendance of their wives and lady friends.

After the banquet a number of interesting after-dinner speeches were given. The first speaker was Hon. Arthur Meighen, Minister of the Interior, who remarked that while at Ottawa he had, of course, discussed forestry questions with the members of the government, none of whom were lumbermen. They were (he added in an aside) comparatively poor men; but he came into direct relations with the lumbermen for the first time on his appointment as Minister of the Interior. There was a great deal of talk about the inexhaustibility of the lumber of Canada, but there were some four hundred millions of acres of land that must be put into forestry if the country did its duty. The extent of the Dominion was very large, but, fortunately or unfortunately, 60 per cent. was capable of only one crop, and that was the forest crop. Mr. Meighen pointed out that in the past there had been great waste in our lumber resources; and, while he feared that a certain amount of waste would continue during the time of the war, they must realize that the lumber resources were a subject for national consideration.

It had become a habit amongst those far from the thunder of the guns to place a relatively great importance on the maintenance of normal or high standards of efficiency on the activities of those at home. They had come in contact with that spirit in the operation of the Military Service Act, and had encountered the spirit, all too prevalent, that if a man is engaged in a useful pursuit it must be concluded that he was not available for the pursuit of war. They had much to do with the elimination of the non-essential industries and the less essential industries. He was glad to read the resolution passed by the lumbermen's association calling for the appointment of a war service board to represent the lumber interests of the country and to aid the government in carrying on the work of the war.

"We are on the eve of a pronounced expansion of the war activities of the government," declared Mr. Meighen. "That is, the supervision the government finds it necessary to exercise over trade in general grows day by day. Conditions to-day are radically different to those of three months ago, and much more different from those of a year ago, because we have to get much of our materials from across the line and more from across the sea. Our allies have found it necessary to make severe restrictions over the materials which are so necessary to the work of the war, and we have found the same conditions. To so govern things to carry on the work at home, and still carry on the war with the least harm to industry, is a problem vast enough for any government. We are compelled to exercise control over the exports of this country, and may be compelled to exercise control over the imports far beyond what we are doing to-day. While we are doing that it will be essential that the provision extends to the producing industries themselves, with a view to the discouragement of the non-essential or less essential industries, and the encouragement of those industries vital to the successful carrying on of the war."

This, said the speaker, as it increased, would make it more and

more necessary that every great industry in Canada should have a representative man or body to answer for it before the councils of the government. He considered that the lumbermen had taken a wise course, which would progress until there was a supervision over the trade of Canada, much greater than any in the past, or that the people of to-day realized must come in the future.

All this was an illustration of the work that yet remained to be done, but it must be remembered that it was all worth while, since the allies were by no means past the summit of the hill and the Germans were very far from beaten.

Further, the minister declared, in the future something must be done toward the elimination of idleness, either amongst the rich or the poor, as an offence against the state, and the time might come when steps toward this end would be necessary.

"This war will be over in your time and mine," concluded Mr. Meighen. "It must be over before any great length of time, and the peace then to be made will be the greatest and grandest peace on the part of Great Britain that her energies have yet achieved. Great Britain will have no reflections that there was anything spared or omitted that she might have done and did not do. My appeal to you to-night, and to the people of my native land generally, is that after it is all over and the time to make peace comes, let Canada have no reflections that there might have been a better peace if we of Canada had better played our part."

The Wood Products of British Columbia

Mr. William Rutherford, Montreal, then called upon Mr. William McNeil, Vancouver, B.C., who delivered an inspiring address regarding Canada's responsibility to the Empire. It would be quite impossible to do justice to such a speech in a written report. Mr. McNeil was listened to with great interest.

One of the interesting sections of his address was a reference to the industrial re-birth of British Columbia which had taken place since the outbreak of the war. To illustrate this Mr. McNeil gave some striking statistics. The re-birth of British Columbia industry, he said, had begun with the shipbuilding industry. Two years ago they had not a shipbuilding yard in British Columbia, outside of the Marine Ways at Esquimalt. Now they had eight or ten yards, and were constructing a large number of vessels, two of which had already been launched. Shipbuilding in British Columbia had come to stay. With the shipbuilding industry there had been, of course, a great development in the lumber industry. In 1914 the cut of lumber in British Columbia had amounted to 966,000,000 feet b.m. In 1915 the total was 1,017,000,000 feet. In 1916 it had increased to 1,280,000,000 feet. In 1917 the total cut of the province had been 1,647,275,000 feet, an increase of 367,000,000 feet over 1916.

In shingles they had done equally well. The 1914 production had been 972,000,000 pieces. In 1915 the total was 1,874,000 pieces. In 1916 it was 1,900,000 pieces and in 1917 the total was 2,300,000 pieces.

An address was also delivered by Brigadier-General F. O. W. Loomis, C.M.G., D.S.O., who told of the great urgency for men and materials at the front. Brigadier-General Loomis paid a tribute to the effective work of the forestry battalions in France and England.

An excellent program of vocal and piano music was also added to the entertainment of the evening.

Operations in Northern Ontario Pulp Woods

The Port Arthur Pulp and Paper Company, of Port Arthur, which recently put their sixty-ton sulphite plant in operation, have established their own pulpwood camp. It is located at Sucker Creek, some thirty miles east of Port Arthur, where one hundred men are engaged under the direction of C. A. Gardner, who has been appointed woods superintendent of the company. Mr. Gardner was formerly foreman for Whalen, O'Gorman and O'Brien. The Port Arthur Pulp and Paper Company are taking out this season in the neighborhood of eight thousand cords and report that wood is worth approximately seven dollars and a half loaded on the cars in that district. Large quantities of pulpwood are being cut in the vicinity and the outlook is considered very good. The Port Arthur Pulp and Paper Company were a few weeks ago awarded the right to cut pulpwood and other timber on the Shibley Reserve, near Port Arthur, containing several thousand cords. The Shibley Reserve consists of about eighty square miles, and the company are paying seventy cents a cord on spruce, balsam and poplar, with the addition of forty cents dues per cord on spruce and twenty cents on balsam and poplar. The price for pine is \$7.50 per thousand feet, b.m.

The Mingo Pulp, Paper and Land Company, whose headquarters are in Toronto, W. A. Brodie being the president, and Clarence R. Pope, of New York, managing director, own several thousand acres of land in six townships to the northeast of Chapleau and traversed by the C. P. R. on the south and the C. N. R. on the north. The company will take off between fifty and sixty thousand cords of pulpwood during the coming year, and will establish a rossing plant at Devon.

The wood will be shipped by the C. P. R. and Algoma Central, a distance of about one hundred and sixty miles, to Michipicoten Harbor on Lake Superior and towed down the lakes to Wisconsin and Michigan points, several large contracts having already been closed for delivery to American plants.

Arrangements are being made by the Spruce Falls Pulp and Paper Company, of Toronto, who were recently awarded the right to cut pulpwood and other timber on the Kapuskasing River limit, to start construction work in the spring on their new million dollar, ground wood pulp plant of one hundred tons capacity. George F. Hardy, of New York, has been retained by the company as consulting engineer. The limit consists of 1,740 square miles in the districts of Timiskaming and Algoma, and covers two blocks of land north and south of the Transcontinental Railway. The Ontario Government, in awarding this concession, adopted a new policy and invited a flat rate on all kinds of pulpwood, for which the company will pay seventy-five cents per cord, while for red and white pine on the limit, the figure is fifteen dollars per thousand feet, b.m. The company can start cutting pulp wood as soon as two hundred thousand dollars has been expended on the pulp plant. The site of the new pulp mill will be seventy miles west of Cochrane, and the headquarters of the company will be at Spruce Falls.

It is interesting to recall that the Black Sturgeon River pulp wood limit in the district of Thunder Bay was awarded a year ago this month to Sam Marks, of Nipigon, Ont., who paid seventy cents per cord bonus in addition to the usual fees of forty cents per cord for spruce and twenty cents for other pulp woods. The limit is about one thousand square miles in extent and located some eighty miles northeast of Port Arthur.

About fifteen months ago the Pic River concession in the Thunder Bay district, consisting of about fourteen hundred square miles, was awarded to J. J. Carrick, ex-M.P., of Port Arthur, his tender being a bonus of fifty cents on each cord of pulp wood in addition to the usual fees. It is reported that extensions of time have been secured by Messrs. Marks and Carrick in regard to the erection of ground wood pulp plants on their concessions, as stipulated in the tenders, but that construction may begin this year.

Progress of Forestry in Britain

A very important report on the subject of national afforestation has been issued by the British Ministry of Reconstruction. These are the principal recommendations:

State control and management under a Forestry Commission represented by a Parliamentary Commissioner in the House of Commons.

A scheme of State planting which in an emergency would keep the United Kingdom independent of imported timber for three years on the present war basis of consumption.

Afforestation at the outset of 1,770,000 acres, the total cost in the first ten years being £3,500,000, and in the first forty years £15,000,000. After that period the scheme, it is estimated, would be self-supporting.

"So far as timber is concerned," the report states, "the surprises of the war have been the immense amount of wood consumed by military operations and the scarcity of ships to carry it. Through the lack of sufficient reserves of its own, the United Kingdom has been compelled to continue the importation of timber on a very large scale. . . . The war has disclosed no demand which could not have been satisfied by timber grown in this country, with its favorable soil and climate and abundance of waste land. It is only a question of time before the whole of the country's growing timber which is fit for commercial use must disappear. The result is a depletion which the Government cannot afford to neglect. This country, poorer in timber at the beginning of the war than any other European country except Portugal, will be more destitute still at its close. Even if every acre felled is replanted, it will be many years before the present output can be repeated."

It is pointed out in the Report that if the Government should wish to employ the maximum number of men discharged from the services during the period of demobilization the rate of planting might be greatly speeded up. The Committee propose that at least 150,000 acres of the initial 250,000 should be planted by direct State action, and that for the remainder (left to local bodies and private land-owners) there should be State assistance and control.

It is estimated that the Committee's scheme would ultimately result in the settlement on the soil of not less than 25,000 families, or 125,000 persons in all. During those months of the year in which there is little demand for labor in forestry but a considerable demand in agriculture, the people would be available for agriculture and food production either on farms or small holdings.

The Minister of Reconstruction is now giving careful consideration to the report with a view to ascertaining how far and by what means effect may be given to the Sub-Committee's recommendations.

Good Work of the Forestry Association

Annual Meeting Reveals Encouraging Results—Progress Evidenced in Many Directions—Gratifying Growth of Membership

Montreal, February 6 (Special to the Canada Lumberman):—In the absence of the Hon. Sydney Fisher, Senator W. Power presided at the annual meeting of the Canadian Forestry Association, held on February 6 and 7, at the Windsor Hotel, Montreal.

The report pointed out that the Canadian people had concerned themselves as never before about the forest resources of the country, and the best methods for their perpetuation. This, in turn, had stimulated conservation policies as applied by governments and private corporations, and was gradually opening the doors for an observance of silvicultural principles in the handling of timber lands. Apart from the initial phase of fire protection, the main hope of progress in the management of woodlands or timber lands, and the improvement of forestry practice on public lands, required not only constructive information, but the effort to make it nationally popular. Early in the year the Association increased its activities in Manitoba, Saskatchewan and Alberta with the object of securing comprehensive amendments to the existing "Prairie and Forest Fires" acts placing a check upon settlers' clearing fires and rendering it obligatory to take out a permit from a ranger or forest guardian before starting such dangerous operations.

The report called attention to the work done in connection with the subject of political patronage in the Dominion Forest Service appointments. Special study had been given to the situation in New Brunswick, while active work had been done in Quebec and Ontario, in the way of meetings and direct educational methods. Steps had also been taken to arouse public interest in the white pine blister rust, which menaced the white pine areas of Eastern Canada.

The balance sheet showed a balance of \$972. Special contributions by individuals and pulp and lumber firms totalled \$2,235. The membership had increased 2,000 members, making a total of 6,200, an increase of 100 per cent. in two and a half years.

Messrs. Ellwood Wilson, R. H. Campbell, W. C. Hall and Paul Owens, referred in complimentary terms to what the chairman termed "the very excellent report." It was pointed out that the results generally were very encouraging, and showed that the association was very much alive. The contributions by the large pulp and lumber companies were evidences that these organizations appreciated the work that was done.

Considerable discussion followed a suggestion by Mr. Clyde Leavitt that estimates be forwarded to the provincial governments of the number of cords or feet of merchantable timber destroyed by fire. This met with considerable opposition on the ground that it was undesirable from the point of limit holders, who might be prejudicially affected if the figures were published; further, that the estimates would be, in the main, inaccurate. The chairman suggested that the Association was in danger of going outside its jurisdiction, and it was agreed that a committee appointed to take up with the governments the collection of standardized statistics on fire losses be continued.

Col. J. S. Dennis, Chief Commissioner of the Colonization and Development Department, C. P. R., was elected president, and Mr. J. A. Gillies, of Gillies Bros., Braeside, Ont., vice-president. The Hon. W. E. Foster was elected territorial vice-president for New Brunswick, and Senator Smeaton White, Montreal, was added to the Board of Directors.

Mr. Pringle Lauds Canada's Resources

Mr. R. A. Pringle, K.C., Dominion Paper Controller, in the course of an address on "Some Aspects of Canada's Forestry Problems," pointed out that soon after the beginning of the war, Great Britain, through a sub-committee, under the Reconstruction Committee, made a complete survey of the lumber position. In Canada we were more fortunate. We had immense resources of all kinds, and had easy access to the great markets of Europe, the United States, China and Japan, and other Asiatic countries. With regard to lumber, Russia stood in the first place in the matter of resources; the United States came second, and Canada third. This country has developed very rapidly with regard to industries connected with lumber resources. Mr. Pringle then sketched the history of the newsprint inquiry, and stated there was no desire on the part of the government but to allow the manufacturers cost plus a fair profit. That was the spirit exhibited by members of the Press of Canada at the meeting at which their representative had spoken. The pulp and paper industry was an important one—he had no idea of its importance until he began his

investigations. Mr. Pringle quoted figures showing the immense expansion of the pulp and newsprint industries, which he attributed to the free access given in later years to Canadian manufacturers of these products. The consequence of this was that capitalists came to this country to obtain the benefit of our virgin forests. Both the exports and prices of pulpwood had increased, and it was only reasonable that this should be so. He had heard men say that there was no value in pulpwood outside of the royalty paid by the manufacturer. He did not agree with this. The reason for this increase was that American manufacturers had to depend upon Canada for a large proportion of their pulpwood, and consequently prices had increased, and in all probability would increase as time went on. Referring to conservation, while not pretending to criticise any government department, he urged co-ordination on the part of the various governments in order to conserve our forests and to carry on re-afforestation. Some of the large companies had made a good start

Col. J. S. Dennis, the newly elected President of the Canadian Forestry Association

in this direction. This was an Imperial question, which required immediate attention, especially in relation to the supply of lumber for Great Britain. We must wake up, or we should find ourselves in the position, thirty or forty years hence, with our lumber supplies immensely depleted. He was much afraid, if we prohibited the export of pulpwood from private lands to the United States, the latter might retaliate by cutting off supplies of coal and other raw materials.

Prof. F. F. Moon, acting Dean, New York State College of Forestry, Syracuse, N. Y., read an exhaustive paper on "The Responsibility of the State in Forest Management," which was a plea for the State management of forests.

Sessions of Second Day

The meeting was continued on February 7, when Dr. John S. Bates, superintendent of the Forest Products Laboratories, Montreal, read a paper on "Present and Possible Products from Canadian Woods," which will appear in the next issue.

The reading of Dr. Bates' paper was followed by a "wood fuel symposium," the object being to discuss the many problems involved in obtaining an adequate wood fuel supply to supplement coal shortages, present and future. "The cord wood scarcity," said the statement calling the meeting, "has proved serious for parts of Canada this winter, and promises to be more acute next winter unless immediate action can be taken by the municipalities."

The discussion was introduced by Mr. Clyde Leavitt, chief forester, Commission of Conservation, who commented on the serious outlook for restricted coal supplies. They had to look this question

squarely in the face, and see what could be done to obtain fuel supplies, and to conserve what would be available. The great difficulty was the shortage of labor, and also that of getting supplies to the points of consumption. The wood dealers could handle the situation in normal times, but there was now a great deal of uncertainty. Municipalities such as Winnipeg, Ottawa and Brockville had already taken up the question of municipal wood yards. There must be an active campaign to educate the people to use wood instead of coal, although the former was dearer.

Mr. A. F. Howes, of the United States Forest Service, Washington, D.C., gave details of how the United States were dealing with the wood fuel problem. The greatest effort was in the direction of getting the people and the farmers to substitute wood for coal. It was aimed at producing an additional 25,000,000 cords of wood. A fuel committee had been appointed in nearly every state to carry out propaganda work; professional men and others had undertaken to cut wood, and plans had also been inaugurated to guarantee farmers prices for their wood.

Suggests Commission to Study Fuel

Mr. G. C. Piche, Chief of the Forest Service, Province of Quebec, dealt very exhaustively with the situation in Canada, Europe and the United States, and also pointed out in detail how Canadians could conserve their fuel resources. He made several recommendations for obtaining large supplies of wood, including the appointment of a Commission to study the consumption of fuel and the reforestation of land with a view to obtaining increased reserves of fuel.

Mr. E. J. Zavitz, Chief Forester of Ontario, speaking unofficially, stated that they had issued warnings to farmers and to small villages, in the hope that during the latter part of the winter they would get out more wood. The Forest Service expected to get into touch with the agricultural representatives. Many of the farmers in southern Ontario did not realize the really serious nature of the situation.

Mr. G. H. Prince, Director of the Forests of New Brunswick; Mr. Toombs, of the C. N. R.; Col. Geckye, Montreal; and Col. Harkson, Montreal, also spoke.

A resolution was passed urging the Association to continue its efforts to secure the early abolition of the patronage system in making appointments in the field service of the Dominion Forestry Branch as a part of the general reform to which the Union Government is pledged.

Another resolution urged the Dominion and Provincial Governments to take every possible step to stop the further spread of the pine blister disease.

Development of Forestry in Britain

Harrison Watson, Canadian Trade Commissioner, in Great Britain, in a recent report to the Department of Trade and Commerce, Ottawa, gives an interesting review of the progress that Forestry is making in the United Kingdom, as outlined in the report of the Development Commissioners for the last fiscal year. He points out that careful consideration was bestowed upon this important question, and adds:—It had been determined that the first requirement is effective education in forestry at suitable centres, regulated by organized research and demonstration, and the provision of a body of trained foresters for the work to be done. Already at the outbreak of war sufficient progress had been made to warrant the opinion that the scheme of afforestation could be commenced, but it is obvious that increased expenditure will be necessary if the large scheme of state forestry demanded by the new conditions created by the war are to be carried out with efficiency and economy.

During the year the commissioners reviewed their policy, especially in relation to the alternatives of purchase and long lease of land, and to their proposals for afforesting privately-owned land on the basis of a division of the proceeds when they accrue, and prepared a memorandum which has been sent to the three agricultural departments of the United Kingdom responsible for the administration of forestry.

The report again urges the importance of the afforestation of land which is at present unproductive, and states that the experience of the war has shown that in prudence the nation must be prepared to incur substantial expenditure in increasing the home-grown supplies of timber, much of the waste land of this country being only suitable for this purpose, while this and similar projects of reclamation will also afford seasonable employment for small farmers and their employees and would be economically worked by such labor. In this connection grants were made to various bodies in England and Wales, Scotland, and also Ireland.

Studies at the Forest Products Laboratory, at Madison, Wis., have shown that Engelmann spruce treated by the sulphite process gives a pulp that compares very favorably in color and strength with that of white spruce.

The Enquiry Corner

Answers to Questions by Readers
Can We Help You?

Cordwood Machinery

Messrs. Williamson & Crombie, saw, planing and shingle mills, Kingsbury, Que., write us for the names of manufacturers of cordwood machinery, consisting of drag and circular saw with necessary power for operation.

The names of some manufacturers have been given them. Anyone interested should communicate direct.

* * *

Gasoline Tractors

A lumber manufacturer in the Province of Quebec writes us as follows:

"Can you tell us where we can buy some gasoline tractors to haul up provisions in the bush? We have a good road, but not good enough for an automobile truck, and there is a forty-mile portage. We would not require a large tractor such as is used to haul logs in the bush, but something that would haul two or three sleighs, say five or six tons. The tractor must run winter and summer, and be built on the same principle as those used for hauling logs in the bush. It must be built with caterpillar chains, as truck wheels cannot be used on the roads we have. The caterpillar chains would have to be at least 70 or 80 inches long and 12 to 15 inches wide. If we can find something which is suitable, we are prepared to purchase several of these tractors."

Machine For Rossing Railway Ties

Concerning the inquiry which appeared in the "Canada Lumberman" of January 15th last, the following letters have been received:

Campbellton, N.B., January 24, 1918.

Editor, "Canada Lumberman and Woodworker,"
Toronto, Ont.

Dear Sirs:—

We have before us your January 15th issue of the "Canada Lumberman and Woodworker," and notice on page 22, "The Enquiry Corner," that the Canada Creosoting Company have been looking for a machine to ross railway ties.

We note also that you say there are no such machines made in Canada. We beg to advise that we manufacture one of these machines, a sleeper sapper, and have one running satisfactorily for the last three years in the Shives Lumber Company, Limited, mill of this town. We regret we have no cut of this machine, but it was built for rossing 6-inch sleepers, 6 in. to 12 in. wide by 8 feet, but any length can be rossed. We would refer you to the Shives Lumber Company, of this town, as to the capacity of this machine.

We are writing the Canada Creosoting Company to-day as we feel quite sure we can supply them with a machine to do this work.

Yours truly,

McLennan Foundry & Machine Works, Limited,
Per Alex. McLennan.

Campbellton, N.B., January 24th, 1918.

Editor, "Canada Lumberman," Toronto, Ont.

Dear Sir:—

In your issue of the 15th instant I note an inquiry for a machine to take the bark off railway ties after being flatted. The answers you have received to the above would lead me to think that there is no successful machine on the market suitable to do this work.

In 1911 the Shives Lumber Company, Limited, began making railway ties on a large scale, and found the labor required to take the bark off by hand was a very expensive process.

The writer was of the opinion that this work should be done by machinery, so, in co-operation with the McLennan Foundry and Machine Company of this town, a machine was designed and installed in the tie department of the Shives Lumber Company. This machine has been in continuous operation for five years and has proved to be a practical and satisfactory method of cleaning up the ties after slabbing.

The manufacturers will no doubt be pleased to furnish any information regarding this machine to anyone interested.

Yours truly,

John N. Maclean, Mechanical Superintendent,
Shives Lumber Company.

The National Wholesale Lumber Dealers' Association will hold their twenty-sixth annual meeting in New York City on March 27 and 28, at the Waldorf-Astoria Hotel.

Splendid Work Done by Forest Laboratories

Need of Attention to the Lumber Interests—Complete Studies of Fibre Dimensions of Canadian Woods—Instructive Bulletins Issued

Dr. John S. Bates, superintendent
Forest Products Laboratories,
Montreal.

Montreal, February 9.—(Special to Canada Lumberman):—During last year, as in 1916, the Forest Products Laboratories, Montreal, were greatly handicapped in their work by conditions imposed by the war. According to the intentions of three years ago, the laboratories should this spring vacate the improvised quarters occupied in the old residence on University Street, Montreal, and move to a building properly designed to handle work of the kind they are doing—a building more in keeping with the importance of the industries the laboratories are intended to serve. The staff, instead of being depleted, as it now is, should have expanded to double its size; but the war must take precedence, and, in spite of the recognized value of the institution in the development of Canadian industry,

the laboratories will have to get along for some time longer on "short rations." Our lumber interests might see that, as soon as possible, the laboratories be put in a position to pay more attention to the needs of the lumber industry as well as to those of the more highly technical ones. The field for such work is plain, and the lumbermen have only to show that they are interested.

Problems of dry kiln practice, of the utilization of mill waste, the demonstration of the real beauty and value of our twisted Northern birch, which is now the curse of the stickerman—these are problems on which intensive work should be done as soon as possible.

Test of Eastern Pines and Spruces

In spite of the wartime difficulties, the laboratories were not idle by any means. The tests of Canadian woods were proceeded with, and have now been completed on the Eastern pines and spruces. The work on Douglas fir was completed some time ago, and a bulletin covering the results has been in the hands of the printer for many months, but has not yet appeared. Information with regard to these tests is available on application to the laboratories, and several firms have made good use of it in securing export trade. A bulletin, "Canadian Woods for Structural Timbers," prepared at the laboratories, was published, and has attracted wide attention, particularly in South Africa.

Strength tests on round mine timbers used in Nova Scotia were finished, and will be published shortly. Already this investigation has led to the saving of a large amount of material and the use of woods formerly considered of no value.

A bulletin reviewing all published literature on the waste liquor from sulphite pulp mills is about to go to press, and will, when published, be an extremely valuable book of reference to pulp and paper men and others interested in the utilization of this huge amount of waste material.

Recent work at the laboratories has shown that it is possible to secure a better preservative treatment of railway ties at less cost than by any of the processes at present in use. It is also possible to treat hemlock and other species which resist the ordinary methods.

The laboratories have demonstrated the commercial advantages of selling pulpwood chipped, dried, and baled instead of in the round. This system makes it possible for a sawmill to get a good market for slabs from spruce, balsam, hemlock, or any pulpwood. A Canadian mill was the first to enter this field, but a number of pulp mills in the United States have taken up the matter, in so far as it applies to their conditions.

Studies of the chemical composition of Canadian woods were carried on, with results which are highly gratifying to the pulp and paper industries and to others concerned with chemical methods of utilization.

Very complete studies on the fibre dimensions of our woods were

made on a number of woods, and proved of considerable scientific interest as well as of practical value in connection with pulp-making.

Valueless Material Made Useful

A year ago a research was started with the intention of finding a Canadian oil to take the place of imported pine oil for use in the flotation process of ore concentration at Cobalt. It was found that there was little or no hope of distilling pine oil with any profit in Canada on account of the comparatively small amount of resin in our wood as compared with Southern pine. Work was then directed on the problem of finding a substitute which could be produced in Canada, and this was found in certain fractions of the tar produced in the distillation of hardwood. This material had no commercial value other than as fuel at the plant where it was produced, but the tests showed that it was every bit as efficient as pine oil for the Cobalt work, and it is now being used there regularly. This not only effects a saving for the mine operators, but makes useful an otherwise valueless material.

A new pulp laboratory was designed and built, and will have the necessary machinery installed as soon as possible. The main items of the equipment are two semi-commercial pulp digesters, having each a capacity of about 200 pounds of chips. One of these is designed for sulphite cooking and the other for soda or sulphate. The remainder of the equipment—chipper, chip screen, pulp screen, wet machine, etc., is in small size, commercial units. This equipment will be sufficient to provide the necessary step between the cooking experiments on a small scale and those on the full scale of the commercial pulp mill.

Dr. J. S. Bates, the superintendent of the laboratories, has not been able to devote more than a small proportion of his time to laboratory work, as his services as a chemical engineer have been put at the service of the Imperial Munitions Board.

Dr. B. Johnsen, chemical engineer in pulp and paper, left the laboratories in October to go to the Hammermill Paper Company, Erie, Pa., as research chemist.

Mr. O. F. Bryant, chief of the pulp and paper division, is leaving to become assistant superintendent of Bennetts, Ltd., manufacturers of leather and fibre board, at Chambly, Que.

An Aggressive Mill Operator

One of Nova Scotia's most prominent business men is Mr. H. T. Warne, a native of Digby County. He was born at Hill Grove and brought up on a farm. At the age of eleven years he began to work in a sawmill, wheeling sawdust. The mills at that time did not operate throughout the entire year, and when closed down he labored on a farm. He soon became both a practical mill man and a farmer.

Less than twenty-five years ago he established a general store at Hill Grove, which he still operates, but which is now only a branch to his main business, the head office of which is in Digby. There he constructed and occupies the biggest business block in that part of the province, from which he does a large retail grocery trade. Mr. Warne has always been interested in the sawmill business and kept abreast the times in the manufacture of lumber, staves, sheathing, flooring, shingles, laths and various building materials.

He has at present three mills running full time and recently acquired the milling property at the south end of Digby, formerly operated by F. M. Steadman. At Five Mile River, Hants County, he owns and operates Mills No. 2 and 3, with two 75 h.p. boilers and two complete sets of machinery, employing about two hundred men in his entire plant, which also consists of five camps or cook houses in the woods, with the necessary horses, cattle, etc.

His other milling properties are at Hill Grove, North Range, Plympton and other places along the line of the D. A. R. His Digby mill is situated at the south end of the town, near the Dominion Atlantic's main railway line, with which it is connected with a siding. It is also near the shore of the Annapolis Basin, which gives access for importing logs or shipping manufactured material either by rail or by water. This mill contains two 60 h.p. boilers and modern wood-working machinery. It will be lighted with electricity throughout as soon as a Delco lighting system can be installed. Mr. Warne has served in Digby's town council, is a member of the Board of Trade and deeply interested in the Western Board. He takes a live interest in church work and for years has been superintendent of Digby's Baptist Sunday School.

What Does Motor Delivery Cost?

An interesting article upon motor truck delivery costs, prepared by C. H. Scroeder, of Toledo, Ohio, appears in a recent number of "Wood Construction." The writer says:

"After our conversation the other day about millwork delivery costs by auto truck I began to realize that this might interest others in our line of business, as you suggested, as it covers accurately our delivery cost by auto truck for a period of nearly four years—a longer period than any I have seen published. I would consider this additionally interesting, as it covers what we consider practically the life of a truck of this class in continuous use—four years. While the truck in question is not quite ready for the junk yard, as you can see by the 'trade-in' allowance we are offered, it is liable to become quite expensive in repairs and get out of commission when we need it most. By comparing our repair bills for 1914 with repair bills for 1917 you can readily see what we are trying to make the other fellow a present of.

"For your convenience in using, I have had our draughtsman get this up in such shape that a comparison of the different items for the different years can be readily made, showing our advancing costs, that we occasionally lose sight of. The truck of which we give this record has been driven by the same driver since we purchased it, and we consider him a first-class man and capable of doing most of his own repair work. We also think that our truck has had as good care, if not better, than the average.

"By way of explanation, I want to say that these figures are absolutely accurate, with the possible exception of the value of merchandise delivered, this might probably be in error to the extent of 3 per cent. to 5 per cent. one way or the other. All during this time we have used horses, and for the last year and a half used two trucks; and, while we tried to keep this record accurately, we know that during the busy season an occasional error has slipped through.

"In the item of accessories this may seem high in the different years. We have probably put items under this heading that justly belong to repairs, such as odometer, wheel chains, stake chains, storm curtains, radiator cover, dry cells, licenses, etc. This item of accessories should probably be put with the repair account.

"The repair bills for each year will look high to the average person, and they undoubtedly are high, but when the general overhauling bill is deducted it leaves the actual repair bills made during the season seem within reason. We have considered it good policy to have our truck given a general overhauling each winter, and, as a result, have had no serious delays during the summer months.

"In figuring depreciation on a motor truck considerable thought should be given this item. We have decided the greater depreciation occurs in first and second years, and on our new trucks expect to use the following basis: First year, 35 per cent.; second year, 30 per cent.; third year, 20 per cent.; and fourth year, 15 per cent., instead of approximately 20 per cent., 25 per cent., 30 per cent., and 20 per cent. This we think will help to equalize and make our delivery costs more uniform. The "trade value" of a truck is a very uncertain amount, and we have come to the conclusion that truck salesmen raise or lower this according to how anxious they are to make a sale. We have had considerable experience in this line during the past week or two, when it became known that we intended buying new delivery equipment.

"The matter of yearly mileage having been less in 1916 and 1917 and the merchandise delivered greater in value than in 1914 and 1915 can be explained by the fact that during 1917 and about half of 1916 this truck made only good sized or full loads, and our lighter truck made all the light or service loads.

"The percentage cost of delivery is mighty deceiving. We only manufacture and handle millwork, and naturally have a great many small orders for odds and ends that make special, or 'service trips,' as we call them. These 'service trips' are surely a luxury. During a period of sixteen months our light truck delivered merchandise valued at \$33,000 that cost very close to 7½ per cent. to handle. The cost per mile for this light truck averaged 37½c.

"We have never been able to keep our trucks busy making deliveries all of the time, and at such times when a truck is not in use the driver helps the shipping clerk assemble loads for the other driver or makes himself useful in a general way around the place. We would say that our trucks are only in actual use about 75 per cent. of the time, yearly average.

"This report only covers our city retail deliveries, and has nothing whatever to do with hauling supplies to the mill or handling our car-load business, which amounts to about twice as much as our city business.

"I would advise anyone operating motor trucks to keep an accurate cost of delivery, as it is very interesting as well as instructive. Further, I find that it pays to explain and to show the drivers and shipping clerks how much it costs for oil, gas, repairs, tires, etc., and how much it costs for each mile the truck is driven. After you have given them this information for a few months they begin to see how

important the item of delivery cost is, and take pride in keeping them down.

"I think the above explanations make our cost table reasonably clear, and hope it will prove interesting to many."

Work of New Association Reviewed

Members of the Southern St. Lawrence Forest Protective Association held their first annual meeting on February 7 at the Windsor Hotel, Mr. W. G. Power presiding. The association has two divisions—the Eastern, covering the forests of Gaspé, Bonaventure, Matane, and part of Rimouski Counties; the Western, the forests of Rimouski County and those of the south shore as far as the County of Donchester.

The chairman stated that the two main subjects studied during the year were the obligatory burning of slash when opening colonization roads, and making it obligatory for prospectors to have their permits endorsed by the local fire ranger before doing any prospecting on forest lands.

The accounts showed a surplus of \$1,558 for the western division, but a deficit of \$486 for the eastern division.

Mr. J. C. D. Brule, manager of the eastern division, and Mr. C. B. Guerin, manager of the western division, submitted full reports on their work, the former division having 23 fire rangers and the western division 28 fire rangers. The total number of acres in the association is 5,726,636. The total number of fires was 48, 43 occurring in the eastern division. The association did a large amount of educational propaganda during the year and also much work in cutting trails, etc.

The following were elected officers: Mr. W. G. Power, president; directors, western division: Messrs. G. V. Perrin, vice-president; H. W. Wilson, J. F. Gregory. Directors, eastern division: Messrs. R. L. Montgomery, vice-president; Angus McLean, Charles R. Macleay, David Champoux, O. Calhoun, C. W. Mallin, W. Russell. Mr. Paul G. Owen was elected secretary-treasurer of the association.

Forest Engineers Elect New Officers

The annual meeting of the Canadian Society of Forest Engineers was held on February 6 at the University Club, Montreal, preceded by a dinner. Mr. W. F. V. Atkinson, Forester of the Spanish Pulp and Paper Company, read a paper on the relation of forestry to the pulp industry, followed by a general discussion on general topics relating to forestry, and also concerning the loss of pulpwood due to shrinkage during stream driving. Mr. Ellwood Wilson, of Laurentide Co., Ltd., was elected president; Mr. J. H. White, of the Ontario Forest Department, vice-president; Mr. Clyde Leavitt, of the Conservation Department, secretary, and Mr. T. W. Dwight, Dominion Forestry Branch, treasurer.

Report That Demand is Lively

Messrs. L. N. Godfrey Company, of Boston and New York, well-known lumber wholesalers in Southern hardwoods, Canadian and Eastern spruce, are having an excellent demand, at fair market prices, for all sizes and grades of Canadian spruce, pine, hemlock, maple, cedar shingles and lath. Their facilities for handling large stocks in car load and cargo lots are ample to meet all the demands with which they have as yet been confronted. Among the varieties of Canadian lumber this firm are constantly buying are spruce, pine, maple, hemlock, cedar, lath, shingles and Douglas fir. They are big distributors in New England and Canada of maple, birch, and oak flooring, short and long leaf hard pine, and handle the output from some of the largest mills in the United States selling oak, maple and birch floorings. Messrs. L. N. Godfrey are one of the old reliable lumber firms buying Canadian lumber, and their interests in the Dominion are looked after by their long standing representative, Mr. John P. Mosher, a Canadian by birth, who covers the Maritime Provinces, Quebec and Ontario on regular quarterly trips. Mr. Mosher knows Canadian conditions well and can be got in touch with through the L. N. Godfrey Company, of Boston.

Inquiring for Canadian Spruce

The Woodstock Lumber Company, of Boston, a big buyer of Canadian spruce, pine, hemlock, and lath, reports business in the United States as good, barring embargoes and freight tie-ups. This congestion is gradually being relieved through government regulation and recent moderation in temperature throughout the country and business is gradually approaching a more normal state. This concern is at the present time looking for spruce boxing boards in sizes 1 in. x 4 in. and up, in lengths varying from six to sixteen feet, and spruce planks 2 in. x 6 in. and up, in lengths ten to sixteen feet—all square edge stock. Sellers of this lumber should write, giving full particulars of stock to offer.

Feeding the Lumbermen—From the Economic, Patriotic and Dynamic Standpoints

By George H. Holt, Holt Timber Co., Chicago*

Why should this association concern itself with this subject?

There are many answers. Let us consider three of them.

The first is economic. We can't afford not to—that is the least important.

The second is patriotic. We ought to. We are stay-at-home brothers to millions who must suffer and perhaps fail.

The third is dynamic. We must—either voluntarily or of compulsion.

All loggers plead guilty to wastage of food. The question is, What can be done about it? It is no longer an individual question. The food of the world has become a common hoard. The wasteful man robs his fellow. He must be controlled or put out of business. Every important association of loggers from the Atlantic to the Pacific below and beyond the Great Lakes is earnestly at work by committees, by experts, and by governmental assistance upon this problem. Every description of woods products, pines, hardwoods, spruces, hemlocks, cedars, etc., are included in the enquiry.

Since of every four dollars spent in logging one is eaten, so to speak, the individual logger will suffer if his competitors deal more intelligently with the problem.

There is nothing scientific or even well-considered about present methods of feeding lumberjacks. It is but the survival of unregulated appetites appeased by untrained and unregulated cooks. It produces a low state of efficiency of man-power, sickness, hospital bills, diminished production of logs, and additional expense for replacing the lost man-power. The soldier is maintained at a state of high efficiency by intelligent rationing and supervision.

Your foreign-born lumberjack eats until he can't walk and can't work and can't digest, and then, when "a good dose of salts" is no longer a panacea, he kicks about the grub, waits until Monday noon, calls for his "time," and goes to Sudbury or Montreal, knowing that some other kind lumberman will pay the employment agent and the railroad company to give another free excursion and another stuffing—and maybe more pay.

If there were no better way we might stand for it. We have mainly followed the line of least resistance "baiting" men with unstinted variety and quantity of food to get them on the pay roll and keep them there and to minimize the risk of losing them to competitors who might bribe them with additional luxuries.

The individual logger cannot institute a reform because the unreforming logger would take his crew away from him. Even the association cannot act independently of other employers in other works or industries or the men would abandon the woods. We cannot ask the camp boss to be the reformer, because he wants to hold his crew; or the cook, because he prefers to be popular with the men and thereby become more popular with the boss.

Nevertheless the boss and the cooks and the men all say that they would accept any reform that applied to all alike. That way lies our salvation in the economic sense.

Consider the Problem from All Sides

When we consider the magnitude and complexity of the problem we realize that it must be dealt with in a thorough and sound manner by intelligent and trained men. It is no job for an amateur like me. Even amateur food controllers are not equal to it. The problem must be considered in the large and in the round and in due proportion.

Take the question of "calories." "A hundred calories represents the heat used to boil a quart of water in cold weather."

A needlewoman requires 1,800 calories per day; a scrubwoman requires 3,400 calories per day; a farmer requires 3,500 calories per day; a mountain climber and a lumberjack from 5,000 to 10,000 calories per day. Climate and exertion are controlling factors.

We employ men for the work that we hope to get out of them.

We want to take good care of them, but how? That is a question for well-developed expert determination. It certainly is not a question for a haphazard cook, or a clerk who orders what he is asked to order—knowing little and caring less.

The national food controllers and several of the state controllers and local controllers have tried to guess a good rationing program, with but moderate success, because of lack of data and experience. Universities and special schools of different kinds are being drafted into the service.

The great Patriotic Food Show at Chicago in January was organized by the State Council of Defence, and the five food groups—meats, fats, sugars, fruits and vegetables, and starches—were planned by the University of Illinois, the School of Domestic Arts and Sciences, the Lewis Institute, the Chicago public schools, and the University of Chicago. A great variety of foods—ordinary, alternative, and substitute—were displayed and demonstrated. People were shown how to prepare and serve them. This is one step in advance, but only one. The printed matter relating to this subject is becoming voluminous and confusing. Whether good or bad it matters not. Our cooks will not read it or profit by it of their own will. Neither will the cooks willingly take instructions from the foreman or anybody else. They get about the same pay as a foreman, and consider themselves quite competent to handle the problem without assistance.

Companies in which I am interested are operating ten camps in the States and five in Canada. We keep a separate record of the costs of feeding men, and are able to make comparisons between localities and cooks. We have a bonus system with some of our cooks, which has its good points, but it is not a remedy for the general evils of which I am speaking. We keep a perpetual inventory book showing supplies bought and distributed and weekly report sheets of the work done, meals served, etc. With these reports we are able to check within moderate limits the actual meals served and the cost per meal. This can be compared with the number of days' work done to obtain other useful information.

When we compare our figures with the Southern loggers, who get their costs down to, say, 25 cents per day, or the Western loggers, who charge board at \$7 per week, we get a suggestion that there is a chance somewhere for improvement. Somebody can work that out, but can we put it into operation in the face of traditional local conditions?

We can get many suggestions concerning foods and cooking and serving, but how can we avail ourselves of them?

We have all had experience with voluntary association agreements—gentlemen's agreements—which were disappointing. We hesitate to take any more chances with them.

Labor and Its Availability

As long as labor is subject to open competitive bidding in the market we must beware of handicapping our particular industry. Our neighbors in the States are talking of measures to check competition for labor and to mobilize the workers.

Over 2,000,000 farmers are organized to get government help in the matter of credit facilities, labor supply, and seed. When the government gets all of the men it wants for the "priority" industries and the 2,000,000 farmers get all they want on the expanded farms, where will the lumberjack be found?

One answer to that is that in these days any industry and every industry must stand trial and demonstrate its serviceability to the world-need and its comparative economic efficiency. If our methods waste foodstuffs and develop vagrants our particular enterprise or our industry will be shut down as a war measure.

My companies have a record of actual weights and measures of foodstuff served. These are reduced to a unit basis of 10 or 100 men, and serve as a check upon amounts and varieties ordered. If we can get similar records of, say, two-fifths of the loggers they will be an important first step in the statement of the problem.

Assume that there are 25,000 men in the logging industry in Ontario. That is more than an army division. If we could save one-half of what they eat and waste of the meats, fats, sugars, and starches that we ought to send abroad, it would supply an army division with

* Paper read before the Canadian Lumbermen's Association meeting in Montreal.

more than they get now. That can be done without diminishing the quantity or quality or value of the food that we give our men. What shall we do to give both the soldier and the lumberjack what they need and what they ought to have?

The figures presented at the different logging conventions showing the tremendous aggregate of use and waste in logging camps are very sobering to thoughtful men. Twenty-five thousand loggers in Ontario are but a small percentage of the men in our industry in Canada and in the United States.

Throughout the States the logging industry is struggling earnestly with the problem; why should not this association fall in line and do its part? The war is one war and the industry is substantially one industry.

Psychological Moment

From the standpoint of economics and the future profits of the business this is the "psychological moment" to put into effect all of the measures which tend to a betterment of the industry after the war. Things which we could not have agreed to and which could not have been enforced before the war are obvious and practical and necessary now.

Developments in all countries have shown the necessity of centralized control and co-ordination. Why should not lumbermen arrive at a standardization of the materials and implements of every description used in the industry, and buy or produce them in bulk, packed in economic form for transportation and safe handling and convenient, and distribute them to members by the most favorable method, aggregating mixed car lots as far as possible by arrangement with the government-controlled roads, and finance the transaction through a government-favored corporation such as that of the \$50,000 corporation which now controls the grain trade of the States, or the \$500,000,000 corporation with which Secretary McAdoo proposed to finance industry.

If our industry is in the essential class the suggestion is practical; if not, the industry itself is not practical, and must, at best, lie dormant. To this end the lumbermen should co-operate to assist in increasing production of food supplies by every practicable means, including the suspension of operation wherever it is necessary to use our forces to assist the production and harvesting of the crops.

Mobilization of Man-Power

This leads to the mobilization of man-power, not necessarily compulsory, but if necessary then compulsory, under the direction and authority of the government. The Southern lumbermen, including retailers, are volunteering their services to aid production under the motto, "Get a hoe and hoe your own row." The Kansas City carpenters have volunteered to suspend work for the period during which their services are needed. The movement must spread, and will include the boys and the girls and the women as well as the men. They are already included in certain very essential portions of the work, such as the production and drying and preserving of vegetables and fruits. The timber-farmer in Canada may not volunteer readily, but he may be induced, if not compelled, to join in.

The United States Government is formulating a plan for licensing fishermen and increasing the production of fish for market and use at the lowest possible price by means of the removal of restrictions as to time and place and the use of tackle, nets, etc. It is preposterous that laws and regulations designed to protect sport fish for the sake of a privileged few sport fishermen should now operate to prevent the largest possible contribution to the food supply that can be made to the extent of many thousands of tons of fish, very few of which are sport fish and most of which live by eating other fish.

If to preserve the profit of the private industry of commercial fishermen it is necessary to double and triple the cost of fish to the consumer it would be far more profitable for the government and for the world to take over the fishermen and the equipment and the business and get the fish.

Selection and Use of Foodstuffs

Not only are we guilty of unintelligent selection and use of foods, and of having a hidebound prejudice against substitutes and "food-stretchers" for men, but we are also culpable in the matter of feed-stuffs for horses and other animals.

The associations representing the feed-stuff industries in the States utilize more than fifty different products—natural, combined, or prepared. They have asked the food controller to place them all under license and appoint a war service committee of forty-nine throughout the States to co-operate in devising and directing the system. Is not that a good business suggestion?

When we have determined by competent investigation and judgment what we need and what we ought to have and how we are to go about securing it in the most economic fashion, we will find that we are open to criticism for our failure to make proper provision in our camps for the storage and utilization and preservation of foodstuffs for their economic handling in the cook-house and for the wastage of the sink, the garbage pail, and the back door.

Camp wastes average enough to feed and develop one pig for every eight men. The evaporation of fat in frying and other forms of cooking and the destruction of meats and all other kinds of food by reason of poor cooking and uneconomic handling is something to wonder at. We pay men for cutting stove-wood to cook foods improperly and uneconomically by direct heat which ought to be cooked in steam cookers and fireless cookers. These devices would pay for themselves several times over in a season, but we have not known that. We shall find it out.

The kind and form of utensils and the methods of "dishing-up" must be considered, and this involves the training of the cook and the cookees and supplying them with facilities for keeping comfortable and clean. We look upon our own wastes and extravagances as relatively small. When we see them in the large as multiplied by the armies that we are feeding they assume serious proportions.

We pay cookees for peeling potatoes and throwing away 20 per cent. of the best of them, while we might for a few dollars peel them in a machine and save the wastage and the time many times over. Of course, it might be much better not to peel the potatoes before they are boiled, but the cooks are not yet educated to that.

The use of boneless meat instead of carcass meat would greatly reduce waste and save a quarter or a third of the cost. The substitution of dry vegetables for green or canned would effect a similar saving in money and time and quantity, at least in war time. Every camp might make its own soap from its wasted fats and from ashes. Every manure pile is capable of producing an important supply of potatoes by the crib methods. One man with the simplest equipment can make 200 pounds of starch a day from frozen potatoes. In England they are using potato butter, as a stretcher. We are making very little use of butter and for substitutes, such as peanut-butter and the large series of oleomargarine types utilizing nut and cotton-seed and other vegetable oils, all of which are worthy competitors of butter. The fats to be obtained from fish have been almost entirely neglected. We raised over 200 hogs this year in one of our operations, requiring them to hustle their own living in the woods, with a very small addition of bran and grain. The man who looked after our horses also looked after the hogs.

The Patriotic Standpoint

If these considerations which are merely sketched here are enough to convince us from the standpoint of lumber economics that it would be profitable to deal seriously and in a large way with this problem, and that, in fact, we cannot afford not to do so, how much more compelling are they when considered from the patriotic standpoint? In our private homes, our clubs, our hotels, our railway trains—more especially in the States—we are practising self-denial that is sweetnessless, wheatless, meatless, heatless, lightless, restless, comfortless, joyless, to escape being hopeless and to "do our bit" in war.

Is the lumberjack superior to the world catastrophe? There is a shortage of food, and we waste that; there is a shortage of material, and we waste that; there is a shortage of lumber, and we waste that; there is a shortage of labor, and we waste that; there is a shortage of money, and we waste that; there is a shortage of time to win the war, and we waste that.

Will Canada stand for that? It is certain that the United States will not. If the federal power of the states now exercised by an autocrat more powerful than any world-vision ever concerned, controlling and directing all the natural resources, all the manufactures, all the transportation, all the money, all the lives, within its domain, and all their foreign relations, should draw the line of embargo at the Canadian boundary, who could raise an effective objection until Canada shall have placed herself on a par with America in measures of service through self-denial?

Patriotism is a word that has become hateful in its parochial or provincial or national or tribal or religious. Patriotism must expand to humanism if it is not to succumb to socialism. If a narrow conception of patriotism is hateful, how much more hideous is the word politics when it is self-seeking! If politics stands in the way of the effective and immediate uses of all of the power and all of the resources of the government, whether in America or in Canada, the remedy is revolution—not a desirable remedy, but inevitable. We have become adjusted to the word war, of which we have no better conception, and we are just becoming conscious of the words "starvation" and "revolution" as far-away thrillers. They may be three thousand miles away as the crow flies, but they are not a year away as Time flies, unless Reform and Regeneration forestall them. I am not hopeful that they can, but I am hopeless of any other outcome.

The Dynamic Reason

Therefore, I have said that the third reason is "dynamic," because we must, voluntarily or involuntarily.

Let no man imagine that he can continue to profit at ease while millions suffer and starve. His very success would make him a conspicuous object for hatred and vengeance.

The revolution in Russia was not precipitated by war weariness.

It was the uprising of the starving and suffering mass against the preferred and indulgent class.

The strikes in Germany are not so much against the dynasty as against food shortage—unequal distribution. We are learning other things from Germany; can we learn anything in this case?

Collective, co-ordinated, centralized, control—these spell efficiency and may spell success. The democratic, individualistic, catch-as-catch-can principle is at stake in a world catastrophe. Can it win?

The problem of "feeding the lumberjack" has become integral with the problem of feeding mankind; it cannot be isolated in the face of war and starvation and anarchy. It is part and parcel of the hazard and horror and hope of the times.

The remedy that I propose is: Collective, co-ordinated, centralized control, and the agency is the co-ordinated co-operation of the lumber industry, with the collective and established authority of the government, which is the executive of the whole people, with centralized control.

Control of all the factors—supplies, materials, labor, transportation, distribution, and finance. The industry must be co-ordinated with the government or it will find itself circumscribed and strangled. The government needs a collective and trained assistance as much in Canada as in America. Only the Canadian Government can deal directly with the American Government as to the effect of restriction on preferential measures upon our industry. In America it is already treated as "affected with the public interest." How can the individual lumberman compete with the government-preferred lumberman? We must subordinate individual prejudice and profit to the general welfare if we would avoid expropriation or suppression.

Reviewing what has been said so incompletely as to "feeding the lumberjack," we conclude that this association should deal seriously and collectively with this problem in all of its ramifications, because it is economic: we cannot afford not to; it is patriotic: we ought to; it is dynamic: we must, or do worse.

Whether the plans shall include a system of rationing the camps, of educating the cooks, of licensing companies, cooks and workers alike, of extending the scope of the service to dealing with production and distribution of supplies and materials, and the financing of industry and the extension of control to other employers of labor and other laborers not lumbermen, and many other details, may safely be left to the informed judgment of the War Service Board.

The necessities of war transcend cost and custom. War is the negation of law and order. We are even now losing our foothold in the rising tide of socialism and revolution. Has democracy the vision and the power to transmute socialism into humanism, and revolution into the reconstruction of order in a regenerated world?

Not Worrying About Embargoes

According to advices received from Vancouver, the shingle manufacturers in that city and vicinity are not worrying over the fact that Canadian freight cars are forbidden to leave the province and that there is an embargo on shipments to all points east of Chicago in the United States until March 1. F. L. Nash, secretary of the Shingle Agency of British Columbia, said that the situation is not extraordinary, for just about this time the same state of affairs prevailed last year. Mr. Nash went on to say that this was the idle season for shingle mills, and that scarcely 50 per cent. of them are working just now. Those that are in operation are not able to ship to points east of Chicago, but there are many shipments being made to Minnesota. So far the shingle manufacturers are not feeling the embargo any more than they expected. It is expected that conditions will improve within the next few weeks, and, with the advent of warmer weather, it is believed that the congestion in the Eastern States will be lessened.

Toronto Dealers Closed Down

At a meeting of the retail lumber dealers of Toronto, held in the Board of Trade rooms, on February 7, the members decided to close their mills and yards whether they were operated by power provided by electricity, coal, wood refuse or other fuel, as set forth by the order of the Fuel Commissioner. The dealers favored united action, although there was no stipulation in the recent decree that plants using other material than coal should close. Another resolution was carried by the dealers to the effect that on the heatless days they would not transact any business with the public or make any deliveries.

The Canadian Ingersoll-Rand Company, Ltd., Montreal, has issued recently Bulletin K-301-A, describing two-stage power-driven air compressors, of the duplex type, "PLB-2." This is a 16 pp., 6 x 9, pamphlet, outlining notable features of construction, such as the "Circo" leaf valves, Haight 100 per cent. belt wheel joint, bath lubrication system, dust-proof frames and casings, etc., as well as the marked compactness of the design, yet easy accessibility of all parts.

News Notes from the Ottawa District

Through a peculiar coincidence death removed on the same night two well-known figures familiar to the lumbering trade of the Ottawa Valley, Mr. W. H. A. Fraser, a partner of Fraser and Company, and a director of the Fraser-Bryson Lumber Company, and Mr. Charles Magee, capitalist and president of Dominion Hardwoods, Limited.

Mr. Magee was found dead in his office in the Union Bank Building, on the night of February 4th. The same evening Mr. Fraser died, following a brief illness at his residence, 180 Metcalfe Street. The late W. H. A. Fraser was born at Westneath, Ont., being the son of the late Alexander Fraser, a pioneer lumberman of the Ottawa Valley. Mr. Magee was a founder of the Bank of Ottawa and its first vice-president.

For a number of years he was president of the Union Trust Company, Toronto. Among prominent lumbermen in attendance at the funeral of the late W. H. A. Fraser, were: Alexander MacLaren, C. Jackson Booth, J. Fred Booth, Gordon C. Edwards, John S. Gillies, and others.

A large government building, in which a number of important branches of the Civil Service will be housed, it is understood, will be erected at Ottawa. The erection, it is stated, is not part of the extensive Government Buildings scheme to erect many buildings on the Wellington Street site.

During the early part of February an amendment came into effect at Arnprior whereby all firewood brought into the town is subject to measurement by a town official. The new measurement scheme of wood does not affect the delivery of wood for fulfilment of contracts existing prior to the date of the amended by-law. The action was brought about by farmers giving short measurement. A small fee is being charged for the measurement of the vendor's wood.

The Commission of Conservation in its most recent Bulletin recommends the extensive use of wood fuel to relieve the coal shortage. Senator W. C. Edwards has recommended that slabs and mill refuse instead of being burned in incinerators be utilized for household consumption.

Brig. General MacRae, a leading British Columbia lumberman, has accepted an Imperial Army appointment recently. Besides being largely interested in the lumber business, he has banking and fishing interests.

Controller James Muir, recently connected with The Evening Journal, has lately commenced a crusade against wood dealers and farmers selling wood in Ottawa giving short measurement. He recited an instance where he had been informed a man bought a load of wood, supposing it to contain a cord, and paid \$11.50 for it. On actual measurement it was shown the load contained only about one-third of a cord. The customer was thus paying \$34.50 per cord for his fuel.

Barr's carriage factory at Pembroke was recently destroyed by fire with a resultant loss of about \$12,000. A considerable quantity of stock was destroyed besides the building. The factory will likely be rebuilt.

About three thousand employees were thrown idle when the John R. Booth and E. B. Eddy plants at the Chaudiere closed for the three "heatless" days.

Device for Rapid Handling of Logs

The International Log Bunk & Equipment Company, of Seattle, whose advertisement appears in this number of the "Canada Lumberman," have about completed their branch office and factory at Redcliffe, Alta., from which they will fill Canadian orders for their Safety-Stake equipment. They have recently filled large orders for Forest Mills of British Columbia, at Nelson, and Giscome Lumber Company, at Giscome, B.C., and with other orders in sight expect to "do their bit" in speeding up the production of war material on this side of the line by furnishing loggers with a device that is indispensable for the safe, rapid and economical handling of logs. The merits of this appliance are so obvious that we trust our readers who need such equipment will give it the careful investigation and patronage it deserves.

The late Charles Magee, Ottawa

MONTREAL

Some Sections Depressed; Others Lively

War Created Two New Departments in Shell Boxes and Wooden Ships—Substantial Stiffening in Lumber Values

Montreal, February 8.—(Special to the Canada Lumberman.)—Poor local business, a good demand from the United States, the worst overseas export season on record, extensive buying of timber due to the revival of wooden shipbuilding, satisfactory box orders, higher prices for pulpwood, and a partial relapse from the boom in pulp, together with a substantial stiffening in lumber values, briefly sums up the characteristics of the Montreal market in 1917.

It will be noted that, whereas there was a decline in some respects, it was compensated for by increased trade in other directions. The war has changed conditions in the lumber trade, having a depressing effect on some sections and invigorating others. It has, in fact, created two new departments—the making of shell boxes and the building of wooden vessels. The former will, of course, disappear with peace, and it is problematical whether many wooden vessels will be constructed for any long period after the war. At the commencement of hostilities there was a slump in almost every line, followed by an improvement in consequence of contracts for shell boxes. In turn, boxes fell away to some extent, together with negligible exports, but to offset this we had the shipbuilding program and a larger demand from the United States. But building steadily declined, with no immediate hope of better things.

Spruce Became Very Scarce

Thanks to some large orders for shell boxes, the twelve months opened with business fairly brisk, but as the stock of dry lumber, especially spruce, was bought up, it became very scarce, and for certain descriptions the demand was better than the supply. Then an era of car shortage and embargoes by the railways followed, disturbing business both for domestic and United States accounts. The embargoes on lumber from the West were especially felt, and it was very difficult for a time to get cars from the coast. From the middle of the year the orders from the United States increased and continued satisfactory until the year closed. The entrance of the United States into the war directed a large volume of business to this side, the enquiries for shell box lumber being particularly good. Per contra, we sent some fairly large contracts to the States for shipbuilding timber. The exchange of commodities between the two countries would have assumed a considerably increased volume but for the car difficulty in the closing weeks of 1917. The lath market was disappointing, with lower prices.

Hardwoods were only in limited request. While the furniture and piano trades bought moderately, there was little doing elsewhere. Birch, however, failing its ordinary market in Great Britain, was sent in larger quantities to the United States. Veneers were in steady request.

The building program in the province was not up to the previous year, and municipalities did not carry out any very substantial improvements.

Will Prices Go Still Higher

The short cut, which was prophesied, scarcity of dry stock, and the strong demand for British Columbia timber combined to materially strengthen prices. These, it is generally held, will further advance—how much is a matter of conjecture, but there is a widespread belief that prices will go much higher—as much as \$10 per 1,00, some say. The conditions are favorable to substantial additions to quotations. Labor is very dear and, to a certain extent, inefficient; wages have risen to an unprecedented extent; provisions are away up—in fact, everything that enters into the cost of lumbering has taken a jump, and somebody will have to pay for it. Then we shall have this year a still smaller cut, and, with increased cost of manufacturing and smaller supplies, the chances are certainly on the side of those who predict a very strong market.

A more active campaign to conserve and protect our forests was carried out during the year in the province. The importance of this work is gradually being recognized, thanks to the propaganda work of the Canadian Forestry Association and the protective measures taken by the St. Maurice Forest Protective Association, Limited, and other organizations. There is now in operation in the province four associa-

tions—the St. Maurice, Ottawa River, Southern St. Lawrence, and Laurentian Fire Protective Associations, together with the Quebec Forest Protective Association. Their work was backed by the Lands and Forest Department of the provincial government. Papers and illustrated lectures on various branches of fire protection and of conservation were given in many towns and cities, particular emphasis being laid on the necessity of governmental action in preserving the forests.

Montreal Local Business

With building at a low ebb, the local trade had a very lean period. A falling off in the erection of munition plants and a decrease generally of building activity resulted in the permits declining by \$946,545. The demand for houses is acute, but contractors claim that the cost of material is so high that there is no incentive to build, as owners cannot see a fair return on their investments. The principal contracts for the year were, as in 1916, outside the city, and were mainly of an industrial character. Yards were poorly stocked, retailers buying from hand to mouth. Proprietors of the yards have, since the war started, found trade a pretty tough proposition, and the list of firms engaged in this department has been very materially reduced, either through failures or by men voluntarily giving up business. The immediate prospect is not cheerful, as indications are that building will again be limited, especially as the prices of nearly all commodities are considerably higher than a year ago. Practically all the yards depend upon construction for disposing of their stock, either softwoods or hardwoods, and a continuance of poor building seasons makes it difficult to make both ends meet. At the same time some of the larger firms transacted a moderate business.

The Shipbuilding Program

The revival in wood and steel shipbuilding resulted in very heavy buying of British Columbia timber. The mills on the Pacific Coast were unable to fill all the contracts, owing to their being booked up with orders for local shipyards, and it is safe to say that only about 60 per cent. of the requirements of Eastern shipbuilders were filled during the year. Prices naturally rapidly advanced, and occasionally premiums were asked by the mills for immediate shipment. When the demand was in full force the Imperial Munitions Board attempted to divert the buying to Quebec timber, but this proved a fiasco. Enquiries throughout the province showed that it was impossible to obtain the desired lengths in any quantities. The order of the Board, therefore, died a natural death. At the moment of writing it is not known what the board will definitely do in the matter of further shipbuilding orders, although the Minister of Marine has announced that the government has under consideration a full program, mainly of steel boats. Apart from timber for ships, the call for British Columbia wood products was not active, falling away noticeably in the last half of the year. The outlook for ordinary dimension timber is not cheering; the government will not undertake any large work, and private enterprise, entailing heavy expenditure, is not to be expected.

Woodworking Industries

Speaking generally, the woodworking industries had a fair year. As in 1916, the great bulk of the work was on shell boxes, the commercial box section being only moderately employed. Orders for the former did not come with the regularity that manufacturers desired, neither was there any material improvement in price, having regard to the higher values of lumber and hardware. Almost from the commencement of the business, makers complained of the low prices which ruled—prices which were forced down owing to the excessive competition to obtain orders, and of which the Imperial Munitions Board naturally took advantage. Under the stress of this keen rivalry several firms dissolved, and others, with ample financial means, gave up making boxes for the government. Contracts let to the weaker firms had to be completed by others at advanced prices. While substantial box makers do not ask for high profits, they are entitled, they say, to prices which will give a fair margin, and they protest against the policy of distributing contracts to small makers, whom, they claim, are unable to satisfactorily carry out the orders, and whose cutting of quotations make it difficult to get a reasonable rate for the work. It is an old story, but the experience of 1917 did not lessen the volume of complaint. The Bethlehem box, which was made in large quantities, has

now ceased to be manufactured. It is expected that considerable orders for the smaller boxes will be given during the year, and if prices of lumber rise, as anticipated, contract rates will certainly improve.

The sash and door business hardly existed, due to the slackness in building; while there was a slight revival in the making of the better class of furniture. Piano factories had a fair year, but the great difficulty in securing certain classes of materials interfered with trade.

A Black Year for Exports

"The worst in the history of the trade" is the way one firm described the situation in the export department. Last year was indeed a very lean period, and, what is more, the slump was not expected, or, at least, to the very serious extent which occurred. It was known that tonnage would be scarce and freight rates high, but it was not thought that the government would claim such a large proportion of space—85 per cent. in the early part of the season and 96 per cent. in the latter portion. The government has now taken over the entire space. No official figures of exports are available, so that an accurate comparison with previous totals is impossible. A rough calculation puts the exports to the United Kingdom and South Africa at not exceeding 20,000,000 feet, in addition to which there is the quota contributed by railways, steamship lines, and small shippers. This does not tell the whole tale, as the British Government shipped on its own account lumber bought direct from the manufacturers, making the total of exports from the port of about 30,000,000 feet. In 1916 the total exports were 104,698,016 feet b.m.

The freight rates again increased, and for the first time had to be prepaid—an alteration to which the shippers did not take very readily, involving as it did financing on this side instead of in the United Kingdom. The rates opened at \$84 per standard and went in the course of the season to \$150, the change from the quotation of shillings to dollars being another innovation. Even at these stiff figures space was difficult to secure, and shippers sometimes found their lumber shut out at the last moment owing to government requirements.

The work was rendered all the more complicated by reason of the British Government placing lumber exports under license, an extension of the conditions in 1916, when hardwoods were put on this basis.

At no period of the season was there any activity. Shipments were, as a rule, of very small quantities, and sometimes the only lumber taken was that required for grain covering. Naturally foodstuffs had the first call on space, and other government goods came next, leaving little for lumber. Spruce formed the bulk of the wood sent, pine making a comparatively poor showing. A small quantity of hardwood was also exported.

The controller of timber supplies in England has announced that while he is looking to Great Britain to supply a considerable amount of pit props and lumber a very large quantity will have to be imported. Stocks must be very low; and, while it is far too early to say anything definite as to our exports next season, there is at least ground for believing that they will increase over the very poor total of 1917.

Pulpwood Again in Demand

Pulpwood was again a firm and active market. The American mills had to once more come to Canada for much of their requirements, the supply being short on their side, while many Canadian pulp and paper companies had to purchase a substantial portion of supplies in the open market. The price to Canadian mills was about \$8.25 per cord for rough wood, with a 9c freight rate, and this has now gone to \$9.50. Some companies with limits are cutting pulpwood in preference to manufacturing their logs into lumber, this being regarded as more economical, and also as a provision against a possible shortage. The rise was stimulated by the urgent needs of American companies, who often paid very high rates and set a standard for domestic buyers. There is a very large amount of wood cut, but owing to the car situation it is difficult to move.

Conditions in the pulp and paper industries changed during 1917. There was an absence of the speculative fever which in 1916 caused shares of producing companies to aviate, and which threatened to seriously affect the markets by the formation of many new companies. Prices of pulp generally receded, owing to diminished buying. In 1916 the paper companies purchased freely; and, as there was a lessened demand for their products last year, owing to general economy in the use of paper, especially in the United States, the stock of pulp accumulated in the previous year were only gradually consumed. This naturally affected the pulp mills, who, as compared with the boom year of 1916, found their products in smaller request. Prices, too, came down from the abnormal points reached in 1916. Considerable quantities of chemical pulp were exported to Great Britain and South America. The United States, however, were the principal buyers, and for the ten months for which figures are available we exported 165,346 tons of unbleached chemical pulp, while the Scandinavian countries, the other great sources of supply, sent 152,929 tons. Canada has been gradually catching up to the European competitors, and in 1916 went ahead in unbleached chemical pulp, although Norway

and Sweden hold the first place in bleached. In ground wood Canada practically monopolizes the market.

Ground wood reached a high price during the year and then declined about \$15 per ton. The mills, favored by ample water supplies, were able to produce very large quantities, and, as the demand slackened off, quotations receded. The stocks on hand are still ample.

News Print Mills Active

Manufacturers of newsprint were very busy throughout the year, being able to readily sell all the possible output. The question of price was the subject of animated discussion. Sir Thomas White fixed the price at 2½c for Canadian publishers, to the great disgust of the mills, who contended that it was too low and that they were discriminated against in the matter of price-fixing. A government enquiry was held, and is still being continued. Mr. Pringle, K.C., the commissioner, in an interim report on January 29, came to the conclusion that 2½c was below cost, and fixed the price at \$2.85 per cwt. for three months. Only 10 per cent. of the newsprint manufactured is sold in Canada, the balance going chiefly to the United States; also to South American and Australia. In the States the price was fixed at 3c.

Most of the pulp and paper mills found labor scarce. The embargoes on chemicals proved another source of worry, while the car situation was a trying problem. Prices of most raw materials continued to increase.

During 1916 various large extensions to plants were planned, but owing to the uncertainty of the situation, coupled, it was alleged, with government taxation proposals, practically all these were postponed. Some new work was carried out in Ontario, but very little in the Province of Quebec.

According to present indications there will be an addition of 25 per cent. to the output of sulphite during the present year. The outlook is for a material improvement in the demand. The stocks of the paper mills are comparatively low, on account of the large consumption from reserves accumulated in 1916, and if there be even normal requirements, the market should be a good one. The following mills will either commence operations or add to their plants: Fraser Companies, Ltd., Edmundston, N.B.; Ha! Ha! Bay Sulphite Company, P.Q.; Nashwaak Pulp and Paper Company, N.B.; Spanish River Company, Ont.; and Whalen Corporation, B.C.

During the year a woodlands section of the pulp and paper association was formed, with a view of dealing with questions of protecting the forests so as to ensure ample supplies of raw material for pulp and paper.

Many Restrictions on Hardwood Exports

Stocks in United Kingdom Are Low and Canada May Be Asked to Help Replenish Them

The trade in hardwoods from the Port of Montreal to the United Kingdom in 1917 was stifled. It was hedged around with restrictions, and, in consequence, fell to very small figures. In the previous year exports were under license; and, although this to a certain extent hampered operations, a fair amount of timber and lumber, especially birch, was shipped from the port. But last year the net was drawn much tighter, while the extraordinary scarcity of tonnage also operated against any appreciable quantity of lumber being sent to the other side.

The shipments were made to British firms who held licenses to import a limited quantity of lumber, which was required either directly or indirectly for war purposes. Thus the market for the commercial use of birch was cut off, and this naturally tended to keep down the demand, even if tonnage were available.

The export timber and lumber business is one of the few which have suffered from the war. It has hit Canadian firms pretty badly, and, unfortunately, the outlook is far from encouraging. Steamship rates have risen to an unprecedented extent, space is nearly impossible to get, and freights have to be prepaid, another handicap against which shippers have protested vigorously.

What is the future of this section of the lumber industry? It is, of course, not safe to prophesy, but if the war continues, it looks as if we shall have to work under much the same conditions as in 1917. Tonnage promises to be scarce—in fact, the government has taken over the entire space—and, with the ever-increasing call for foodstuffs and ammunition, we can hardly expect that the government will find room for such commodities as lumber except where it is very urgently needed.

We know that stocks of hardwood are very low in Britain and Canadian lumber is required. The controller of timber supplies in England has publicly stated that he will have to look abroad for a very large quantity of lumber, and if this be so, it is only reasonable to expect that Canada will be asked to supply a fair share of the lumber. At any rate, we look for an alleviation of the situation of last year, when exporters were hard pressed to obtain space.

Four Associations Form New Body

Quebec Forest Protective Organization Comprises All Those in the Province—Co-operation and Progress on Mutual Matters

Robt. P. Kernan, President,
Laurentide Forest Protective Ass'n.

Montreal, February 8.—(Special to the Canada Lumberman): The Quebec Forest Protective Association was formed at a meeting held in the Windsor Hotel, Montreal, on the evening of February 7. The association comprises members of all the forest protective associations of the Province of Quebec—the St. Maurice, Ottawa River, Laurentian, and Southern St. Lawrence—with the object of co-operating and interchanging ideas on subjects of mutual interest. A preliminary constitution was adopted, subject to further modification.

The association held its first convention on February 8, Mr. Ellwood Wilson presiding. The convention, which was very largely attended, including lumbermen from the St. Lawrence, Ottawa Valley, New Brunswick, and On-

tario districts, discussed various aspects of forest protection.

Mr. G. C. Piche, chief of forestry service, Quebec, reviewed the operations of his department. Much remained to be done, and, with the co-operation of the government and lumbermen, it would be possible to place protection on a still higher plane. The control of logging operations continued to give satisfaction, but as the bulk of the timber supply was now remote, it became necessary to devise new methods of lumbering, and the examination of the areas to be cut should be made at least a year in advance. The removal of hardwoods was another problem requiring an early solution; it might compel the lumbermen to modify entirely the present methods of transporting their logs from the forest to the mill, but this removal was imperative in many locations if it were wished to perpetuate the conifers. The amount of pulpwood shipped from Quebec in 1916 was 785,879 cords, an increase of 162,000 cords. The speculation was not as bad as it was, the retention of a certain amount in guarantee of good faith from those obtaining location tickets having compelled a number to make good. There had been a change of opinion with regard to the employment of forest engineers. Technical studies had been started on the old tracts, including a section of the limits of the River Ouelle Pulp and Lumber Company, and also on the St. Maurice, and these would be continued.

Mr. W. G. Howard, Commission of Conservation, New York, gave details of fire protection systems in the Adirondacks.

Aerial Service to Deal With Fires

Mr. J. B. Harkin, commissioner, Dominion Parks Branch, dealt with the fire-fighting side of the work. He suggested the appointment of an inventions board, to consider such questions as the employment of aeroplanes, gasoline engines, wireless telegraphy, and other appliances to more effectively deal with fires. He had, he said, visions of the employment of aeroplanes equipped with gas bombs for the smothering of fires.

Senator Edwards stated that he was the originator of the fire protection system in the Province of Quebec. His firm had had no serious fires except one, which originated on neighboring limits. Ninety per cent. of the whole question was hindering the origin of fires. He cordially approved of the idea of the employment of aeroplanes, wireless telegraphy, and telephones, and the greatest efficiency in fire-fighting would come from their employment. With regard to improvements in lumbering, he suggested that the woods operators of the various lumber companies should immediately confer with one another, with a view of keeping costs of cutting trees and haulage per mile, which he believed would result in reducing costs of production. He moved a resolution approving of the fire system of the four associations and "accepting the proposal of the Quebec Government to form an advisory board or executive, of which the Minister of Crown Lands, or his appointee, shall be a member, and on which each of the associations, or any similar associations to be later formed, shall have one representative, thus continuing the well-organized existing system, with the full approval and co-operation of the Quebec Department of Crown Lands, which department so well administers the affairs of the

forests of the province, particularly in the interests of the public, the lumbermen being the burden-bearers."

Mr. A. MacLaurin, St. Maurice Paper Company, Montreal, seconded the resolution, which was carried.

Mr. G. H. Prince, chief forester, New Brunswick, read a paper detailing the steps taken in surveying and classifying the crown timber lands of his province. The lumber firms, he said, had co-operated in the work, mentioning in particular the Snowball Company. The method was the strip method, a 4 per cent. cruise being made. The timber estimates are being prepared in areas of about 4,000 acres, giving particulars of the areas covered by hard, soft, or mixed timber, with a commercial estimate of each species. Up to the present 1,250,000 acres have been examined, or about 17 per cent. of the crown lands. Some 800,000 acres have been tabulated, and the results give 43.3 per cent. area covered with soft woods, 30 per cent. with mixed hard and soft, and 4.3 hardwoods, 10.3 burnt land reproducing, 8.7 per cent. burnt land not reproducing, 2.8 per cent. barren, treeless land, 3 per cent. lakes and water, and 3 per cent. cleared and cultivated. In regard to the timber on the above 77.6 per cent., the estimates give softwood, 600,000,000 feet of softwoods and 400,000,000 board feet of hardwoods. The percentage of softwoods were: White spruce, 9.9; black and red, 15.8; fir, 15.9; white pine, 3.3; red pine, .004; cedar, 8.4; hemlock, 3.7; jackpine, .14; total, 57.1 per cent. Percentage of hardwoods: Yellow birch, 18.4; maple, 6; beech, 3.3; white birch, 8.9; poplar, 5.4; other hardwoods, .9; total, 42.9 per cent. These figures could not be taken as an average of the whole province; in fact, where the survey approached the headquarters of some of the streams the estimate of softwood per acre was nearly double the average given above. Thus as the survey proceeded inland the estimate should be increased. The work would greatly facilitate fire protection.

Mr. Fletcher Suggests Wireless Stations

At the afternoon session Mr. L. Fletcher, of Boston, outlined the application of wireless telegraphy to forest protection. He suggested that observation stations should be equipped with radio apparatus, each tower being manned with three to four men, one of whom would be responsible for looking out for fires. Aid could then be summoned from other stations. Wireless could also be used in conjunction with aeroplanes. Great strides had been made in portable apparatus, and after the war there would be considerable developments. Wireless telephones were not, in his opinion, practicable. There would be no difficulty in training men, as the working of wireless was easily learned. He recommended the installation of ½ kw. sets, which could be used for commercial purposes as well as for fire protection. The estimated cost of a set, with observation tower and generating unit, was \$3,000, the upkeep being about \$35 per annum.

Major H. E. Kennedy, of the Royal Flying Corps, sketched the possible application of hydro-aeroplanes to forest protection. He was of opinion that the country would provide easy land places—a most important consideration. He outlined the use of three aeroplanes on a six months' basis, working five hours per day, two machines being in commission and one used as a spare. The cost of these machines totalled \$24,000, with \$1,000 for a shed. The machine should be of the pusher type for forestry work, good gliders, and slow-landing. It was also desirable to have standardized machines. Labor would cost \$4 to \$5 a day; two pilots, \$10 each per day; depreciation, 10c per square mile flown; and petrol and oil, 2c per square mile. Each machine could cover 8,000 square miles per day. He thought that kite balloons might be used instead of observation towers. It was possible for machines to be used for the conveyance of food, etc. There would be no difficulty in observing from a machine, provided, of course, the growth was not particularly dense. Neither heat nor cold affected the working of the machines. There was no difficulty of landing either in lakes or on ice covered with snow.

Mr. E. J. Zavitz, chief forester, Ontario, dealt with the slash regulations in his province. Mechanical equipment had proved, he said, of great value in Ontario. They had had 1,110 fires last year, of which 549 were due to railway operations, not always the fault of the companies.

A discussion followed as to the responsibility of the Dominion Government railways for fires, particularly in view of the fact that the railways were not under the jurisdiction of the railway commissioners.

Mr. W. C. J. Hall, superintendent, Protective Branch, Province of Quebec; Mr. Black, of the Ottawa River Forest Protective Association; and Mr. W. G. Power, president of the Southern St. Lawrence Forest Protective Association, also spoke, the two former summarizing the results of the past year in fire protection in their districts. Mr. Black also protested against the lumbermen having to bear all the expenditure, and declared that certain mining companies in Ontario should contribute toward the cost of fire protection.

This concluded what Mr. W. G. Power declared was the finest forest fire protection convention ever held in the country, the interest shown being in marked contrast to that of a few years ago.

Develop Every Water Power in Canada

Is Plea of Retiring President of Pulp and Paper Association—Industry Faces Scarcity of Raw Materials and Coal

Montreal, February 1.—The Canadian Pulp and Paper Association, with the technical section, held its annual meetings on January 30 and 31 and February 1 at the Ritz-Carlton Hotel, Montreal.

The technical section held four sessions on the first two days, under the presidency of Dr. J. S. Bates, of the Forest Products Laboratories. Various reports of committees, of which Messrs. J. A. DeCow, T. L. Crossley, O. F. Bryant, J. N. Stephenson, and C. B. Thorne were chairmen, were presented. The following officers were appointed: Chairman, Dr. Bates; vice-chairman, Mr. C. B. Thorne, Riordon Pulp and Paper Company; council: Messrs. Olivier Rolland, Rolland Paper Company; John Stadler, Belgo Pulp and Paper Company; and F. A. Sabbaton, Laurentide Company.

Papers on technical subjects and a review of the pulp and paper industry in Canada were given by Messrs. J. J. Sullivan, A. M. Beale, Foulès, R. W. Hovey, A. L. Dawe, L. Heber Cole, Dr. B. Johnson, and Dr. W. G. Wilson.

Mr. R. H. Campbell, director of the Forestry Branch, Ottawa, read a very exhaustive paper on the "Wood Pulp Situation and Prospects in the Dominion." He referred to the use and suitability of various Canadian woods for the manufacture of pulp, pointing out that spruce was chiefly used for this purpose. The four species of balsam fir were mainly used in Eastern Canada for pulp, while hemlock was more largely used in the United States than in Canada. He thought that there was also an opening for the freer use of jackpine. Poplar had been used to a small extent. No hardwoods were being used in Canada for pulpwood. Mr. Campbell then outlined what had been done by the various government and commercial companies with a view to determine the extent of our forests, and said that in reality the former had done but little work in this direction. Mr. Campbell went on to consider, geographically, the various types of wood to be found in Canada, and also made estimates of the total stands of pulp woods considered by provinces. He pointed out, with regard to average prices, the following variations, the price being based on per cord: Nova Scotia, 1908, \$4.39; 1916, \$5.27; New Brunswick, 1908, \$4.94; 1916, \$4.73; Quebec, 1908, \$5.73; 1916, \$7.40; Ontario, 1908, \$7.23; 1916, \$7.87; British Columbia, 1909, \$7.44; 1916, \$7.43. The total consumption of pulpwood had risen from 458,777 cords, of a value of \$2,931,652, in 1908, to 1,764,912 cords, of a value of \$13,104,458, in 1916.

Messrs. Elwood Wilson, C. B. Thorne, and J. Stadler also spoke on this subject, the former insisting upon the importance of the government making systematic and full studies of the stands and value of timber in Canada with a view to conserving our raw material.

Benefit From Woodland Section

Mr. C. Howard Smith presided at the meeting of the association held on February 1. In his presidential address he referred to the starting of the woodland section, from which much benefit was expected. The technical section had, he said, done good work, it being important that the technical side should be supported. Last year was a critical one for the industry. The heavy demand for pulp continued until March and April, when the peak was reached; this was followed by a decline. Mr. Smith then traced the history of the newsprint enquiry and also referred to the enquiry into book papers, stating his strong objection to price-fixing by the government. The pulp and paper industry was one of our basic industries, and it was important that it should continue to expand; it would do so, unless unfair legislation were enacted. Considering the great capital employed and the risks, 7 per cent. was not a sufficient return. Many new projects outlined in 1916 did not materialize, owing to the uncertainty of the situation; the present year did not promise any great developments. Raw materials were scarce and high, while the coal problem was a menace to the industry. Mr. Smith urged that every available water-power should be developed. The Province of Quebec had done exceedingly well in this direction, and Ontario had also shown enterprise, but much remained to be done. Considerable progress had been made in standardizing the products of members of the association, but there remained more to be accomplished.

Reports of the various sections were submitted by Messrs. G. M. McKee, Carl Riordon, J. A. Bothwell, F. J. Campbell, J. F. Taylor, F. H. Gage, G. M. Graves, F. H. Wilson, Ellwood Wilson, and Dr. J. S. Bates. Mr. McKee stated that last year the output of newsprint was 592,000 tons, an average of 1,900 tons per day. Mr. Carl Riordon spoke of the growing production of sulphite and sulphate pulps, 2,514 tons per day of the former and 587 tons of the latter being made. Canada must look for wider markets and manufacture a suitable export quality. Prices of sulphite last year had fallen from \$90 to \$110 at the mill to \$60 to \$80, but he thought prices would be maintained. Mr. J. A. Bothwell, reporting on mechanical pulp, said that prices had greatly fluctuated during the year, ranging from the highest ever known to differ-

ent quotations. Prices had to some extent been governed by the car situation. Dr. J. S. Bates spoke of the large amount of work done by the technical section in reference to standards, education, and the collection of data.

The report of the secretary, Mr. A. L. Dawe, showed total receipts of \$21,553 and a balance of \$2,775.

Mr. F. J. Campbell, of the Canada Paper Company, Windsor Mills, Que., was elected president and Mr. J. A. Bothwell, Brompton Pulp and Paper Company, East Angus, P.Q., vice-chairman.

In the afternoon Mr. G. Carruthers, president of the Interlake Tissue Mills, Toronto, spoke on the "Problem of Applying Technical Education to the Paper Industry of Canada." The members held their annual dinner in the evening, when Mr. George H. Mead replied to the toast of the "Pulp and Paper Industry."

Has Many Obstacles to Overcome

Export Lumber Trade Finds Harbor Commissioners Have Done Little to Cheapen Cost of Handling at Montreal

By E. L. Todd, Montreal

The export lumber trade at Montreal has many difficulties to contend with. First and foremost, although the trade is allowed five clear days in which to discharge cars on the docks before having to pay any demurrage claim, it has to pay considerable amounts in demurrage through no fault of the merchant. A certain period is allowed for cars to arrive at Montreal from the time goods are required to load on steamers, and, if the steamer is late, generally the steamship companies will not allow the cars to be unloaded on their docks, thereby causing the trade to pay demurrage. I understand thoroughly that the steamship companies have their difficulties to contend with, such as the landing of passengers in the shed, congested state of sheds, and that they do not know where the steamer will load. But ask the merchant who does business on the wharf whether he can at all times get at the goods quickly, or whether a teamster can unload his load quickly. Invariably he will say, No.

Where a steamer has to unload in normal times two to three thousand tons of cargo in a shed and load an outward cargo, the man who has to team his goods into the shed generally comes off short, or, if he does get there, it is through a streak of luck.

Have the harbor commissioners done anything to cheapen the cost of handling lumber at Montreal? Most decidedly no. The export lumber trade paid out, previous to the war, pretty nearly double what was paid in 1903 for teaming lumber into the sheds. Part of this is due to higher wages and part is on account of not being able to do a day's work properly on the docks.

Of course, it must be acknowledged that the trade is a little better off in some respects as compared with the old days, when we had to put valuable stock outside the old wooden sheds, mostly in the mud, where, when a load of lumber was dumped on the docks, you had to stand about twenty feet away, or, if you did not, had to get dry clothes through being plastered with mud from head to foot.

In the old days no trains were allowed on the docks after 7 in the morning; now the harbor commissioners have their own engines, and place cars at all hours of the day and night, which is a decided improvement. You are, however, never sure of getting cars from the railways, and, in order to do a day's work, you have to order down to the docks more cars than you can handle in a day. You are also penalized by the harbor commissioners if you do not unload your car or cars within 72 hours from the time of arrival on the docks to the extent of \$1 per day.

W. Roderick Dorsey, American Consul, Quebec, P.Q., reports that the total of all exports from that district to the United States in 1917 was \$23,213,846, as compared with \$16,264,382 in 1916, an increase of more than 42 per cent. "When I have had time to analyze the total, I believe it will be found that a considerable portion of the advance is due to enhanced values, and that wood and its products will not be found an exception," he adds.

New Woodlands Section Organized

Special Attention Will Be Devoted to Getting Out Timber and the Efficient Operation of Camps

Montreal, February 7.—(Special to the Canada Lumberman.)—A woodlands section of the Canadian Pulp and Paper Association was definitely formed at a meeting held at the Windsor Hotel, Montreal, on February 7. Mr. Elwood Wilson, who presided, stated that it had been felt for some time that the men engaged in woods operations should get together. The idea was to meet about twice a year to discuss methods, costs, and other subjects of common interest—in brief, to co-operate. There was no competition in any sense of the word in woods operations, and there was every reason why they should get together.

Mr. F. A. Sabbaton, of the Laurentide Company, Ltd., Grand'Mere, P.Q., referred to the great changes in the equipment of pulp mills in the last fourteen years, resulting in the installation of new machinery. He also dwelt upon the steps taken by the Laurentide Company in providing good conditions for the men, and asked whether any of the methods he referred to were applicable to the cutting of logs, the floating of them to the mills, etc. He wondered if as much trained thought, as much technical skill, as much judicious expenditure of capital had been brought to bear on this difficult problem of logging operation and management as had been pumped into the equally difficult problem of the proper running of the mills. Mr. Sabbaton said that he did not see that the two problems differed materially in their basic principles—the proper studying out and trial of mechanical equipment and the careful training of special labor. The men who cut the logs and drove them were not in any way a different class of human beings from the ones who ground the pulp and manufactured the paper, and if good housing and food conditions were in one case conducive to increased efficiency it should also increase the efficiency in the other case. Accounts showed that the cost of making and driving logs for the Laurentide Company exceeded the expenditure in the mills by about 25 per cent. "If, therefore," concluded Mr. Sabbaton, "we are justified, as we feel that we have proven we are, in building up a large organization and employing the highest trained technical skill for the efficient operation of our mills, how can we justify ourselves in not expending a similar amount of energy and careful thought on the question of getting out our timber? These are times when many radical ideas are being brought forward; when business and commercial methods that we thought were impracticable are being forced upon us, whether we like them or not. The labor market is becoming more and more difficult to handle, and the necessary remuneration is still rising. The question of providing proper food for the men in the woods has become not only a problem from the commercial and financial point of view, but must be also viewed from the practical standpoint—these men should be fed, at least in part, on a quality of food demanded by our men in the trenches. Is it not, therefore, necessary for us to put away any preconceived idea as to how certain kinds of work should be accomplished and, at least, try out that which will at first appear to us to be rather radical and drastic methods?"

Mr. R. P. Kernan, of the Donnacona Paper Company and the Baie St. Paul Lumber Company, remarked that the great difficulty in logging was to get men to stay year after year. They apparently had no interest in lumbering operations, and departed time after time. The old lumbermen seemed to have no desire to put much money into good camps. His idea was that one way to hold men was to give them good food and build comfortable dining rooms, and he had found by experience that this had worked out fairly well. The labor situation was getting very serious, and he was of the opinion that one way to overcome this matter was to substitute machinery for labor—tractors for hauling provisions and logs.

Mr. J. Dalton, Three Rivers, pointed out that while in the mill the men were bound to keep pace with the machinery, there was no such obligation on the part of the men in the camp. In the woods there was no means of putting a driving force into the men and to get the best results out of them, for the reason that if they were not satisfied they simply travelled on. Moreover, the camps were moved from year to year. He stated that some years ago his company tried to improve the feeding conditions, and substituted beef for pork, but the men absolutely refused to touch it, and a large quantity was wasted.

Mr. J. Macoun, of Ottawa, suggested that the machinery used in the west of Canada might be adapted for use in the East.

Mr. F. C. Gaylord, forester of the Webb Estate, Adirondacks, gave his experience of feeding the lumberjacks in that district. He stated that, with good living conditions, although the men might leave them for short periods during the season, they came back year after year. Thus he was able to get out a normal quantity of pulpwood, while others had not been so fortunate. With regard to machinery this was merely a question of local conditions. Machinery used in the West was not adapted for the East, the conditions being altogether

different. He had found the utmost difficulty in getting the lumberjack to adapt himself to new conditions. He did not want to do anything in a different way from what he had been accustomed to and was adverse to new methods.

Mr. E. N. McLaren, of Laurentide, Ltd., spoke of the use of gasoline tractors by his company, stating that they had been only a qualified success.

Great Advances in Wood Operations

Senator Edwards remarked that Mr. Sabbaton, from his point, was perfectly right in the view he had taken, but he (the Senator) desired to point out the difference between applying improvements to the mill and to the woods. In the mill there was machinery; in the woods there was no machinery to get the utmost out of the men, because in the latter you had to take into account the human element. Great advances had been made in wood operations, and still greater ones would be made, and the co-operation of practical lumbermen in exchanging ideas would be a factor in this connection. The question of locality was paramount in considering the application of machinery, and, in his opinion, the application of British Columbia logging methods to the East was absolutely out of the question. Lumbering in the Southern States was a simple proposition, and in this relation the speaker recounted his experience when visiting Louisiana, contrasting the methods there with those in the Ottawa Valley and in Quebec. In the Ottawa Valley it took two and a half to three years to make a single turnover of the lumber. He believed in the application of machinery wherever it could be done, but he did not think that the machinery employed in the South and in British Columbia could be used in the East. These might be certain localities where it could be applied, but, generally speaking, it was out of the question. Lumber was not being made as cheaply as in the old days, for the new equipment had enhanced the cost. Referring to the matter of ameliorating the conditions of labor, there was a great deal that could and should be done. The Senator remarked upon the great variety of foods to be found in the lumber camps. There was, he added, a greater variety than were to be found at the Ritz-Carlton and Windsor Hotels. If you liked the kind of foods provided in the Canadian and United States lumber camps, the men there were the best fed men in the world. On one visit to a camp he found eight kinds of cakes and as many of pies. In his opinion, the feeding system of sixty or forty years ago was a great deal more healthful and better for the men than it was to-day. But the lumber companies had been forced into the present system. One man actually left a shanty because the cheese was not colored. Speaking of machines for cutting trees, the speaker remarked: "Give me two French-Canadian in preference to any machine you can introduce."

The Operation of Gasoline Tractors

Mr. W. G. Power, of the River Ouelle Pulp and Lumber Company, gave some details of the operation of gasoline tractors on the limits of his company. He said that operations were on a stand of timber of from eighteen to twenty million feet. The first consideration in going into the question of log-hauling by tractors was to make a preliminary survey of the road—the road was a most important factor. After the road was built, the next thing was the upkeep. It was also important to get the road into shape in the fall of the year; get sufficient ice on it, and keep it in good condition. Ordinary sleighs were used. As to the cost of handling, this was increased in proportion to the decrease in the size of the logs. Some firms handled the logs full length; his company were handling nearly all 16 feet. As far as possible, they tried to eliminate the number of roads, and to yard all the logs on one main road. The object was to have the machines working every minute. A round trip with a load took about two and a half hours. Some thirty or forty sleighs were utilized, to keep the loading ahead. The grade did not exceed 1½ per cent., and it was just as impossible to haul up-grade with a tractor as it was with horses. Four sleighs were handled per trip on an average. It was absolutely necessary to have two locomotives, so that if anything went wrong with one the entire operations were not held up.

Mr. Sabbaton enquired what was the cost as compared with horses.

Mr. Power replied that horses were not able to do the work. The cost of \$418 per mile for cutting the road included the construction of ten bridges. He was satisfied that gasoline tractors would give good results if handled properly, but were not satisfactory if handled in a half-hearted way, as was the case in some instances. If one was not prepared to do the thing right, better leave it alone.

Organization and Election of Officers

The meeting then proceeded with the business of organization, and elected the following officers: President, Mr. G. W. Power; vice-president, Mr. Angus McLean, Bathurst Lumber Company, N.B.; directors: Messrs. Thomas Mack, Brown Corporation, La Tuque, Que.; M. C. Small, Laurentide, Ltd.; Ellwood Wilson, Laurentide, Ltd.; J. Black, J. R. Booth, Ottawa, and F. M. Anderson, Shives, Ltd., Campbellton, N.B.

8,000,000 Feet of Logs in this Drive

Although a log drive down an Oregon stream lacks the spectacular features associated in the mind of the Easterner with the great log drives of the old Northwest, the kind that you read about, it produces the same results in furnishing the cheapest means of transporting logs from woods to mill that has ever been devised.

A recent drive in Mill Creek, a tributary of the Yamhill River, proved the best that the Sheridan Lumber Company ever pulled off, and furnished the mill pond with 8,000,000 feet of logs from the several rollways, where fine quality fir logs had been banked in four lots of 2,000,000 feet each, along the intervening eight miles of creek from the mill to the splash dam. Mill Creek has a narrow channel about ten feet wide below the dam, but the bed of the stream is up to fifty feet wide; outside the main channel the bed runs in benches in the spots selected for the rollways, by Manager Karl Fischer, where he had banked the logs, practically in the channel, when the stream ran bank full, as it did, as soon as he opened the floodgates of the dam and the great wash carried everything before it, even to cleaning up the leftover logs along the stream from past drives that had not passed out as well as this. Manager Fischer stated that it would not cost him \$50 to roll into the stream the few logs that did not float in on this drive, and, in fact, he would probably leave such logs as shear sticks to prevent logs from banking at same places in the next drive, which will be staged for a few weeks later, when both another lot of logs will be banked and another flood is impounded above the dam. Not a peavy or red shirted river driver was involved in this driving job. There were no jams to break up. Affairs just proceeded in regular

form, according to program, and the mill has a stock of logs in the boom to last many a day, with more to follow, at a cost for transporting eight miles that is negligible and did not necessitate taking cars out of service for this log haulage that are needed to haul the finished product from the mill, and, too, delivery was made over night, which is certainly going some.—West Coast Lumberman.

Wood Alcohol an Important Product in War

An announcement came from Washington recently that the country's supply of wood alcohol has been taken over by the National Government. The importance of this announcement to the lumber industry will promptly be recognized, and it will undoubtedly be a very material stimulus to the wood chemical industry—a very practical form of conservation of mill and forest waste, although in this connection applying chiefly to hardwoods.

Wood alcohol is a product having a number of important industrial uses, but its greatest importance at the present time rest upon its use in the manufacture of explosives.

It will, of course, be possible very largely to increase the manufacture of wood alcohol in this country if labor and plant equipment are obtainable, and if the established price for it is sufficiently attractive to compete with demands for human effort in other industrial lines.—American Lumberman.

Review of Current Trade Conditions

Ontario

There has been very little change in the transportation situation since February 1. All of the railroads are having trouble operating their trains, and schedules have been badly interfered with. Wholesalers report that the amount of business offering is good and that purchasers appear willing to pay the increased prices asked without demur, but the difficulties of making and securing shipments make the business unsatisfactory for all concerned. Embargoes have been placed by the C. P. R. and the T. & N. O. on everything south of Sudbury and North Bay, and the G. T. R. will not accept cars from either of these roads west of these points.

The market has increased in firmness in the Ottawa district as compared with the last two weeks in January, and there is a general belief that prices will go higher. There has been a slight improvement noticeable in the car situation, but unfavorable weather conditions resulting in a tie-up of traffic offset the advantage of the increased number of cars.

The demand for lumber for building purposes is dead at the present time, and stocks of dry lumber are very scarce. There has been another increase in the number of embargoes to United States points. The order of the fuel controller for three "heatless days" caused plants throughout Ontario generally to suspend operations. The firms that utilize waste for fuel, as well as those using electricity, were, of course, able to operate.

There is a prospect of further shell box orders being let by the Imperial Munitions Board about March 1. This business constitutes a fairly steady demand for lumber, although the trade in some instances is unsatisfactory owing to the low prices received for the boxes.

There is a steady demand in Ontario for British Columbia stocks and Coast mills with representatives in the East report that their firms are doing a steady volume of trade. The shortage of cars and difficulties of transportation have affected this business the same as that from other points, but last month there was an apparent rush to place orders before the expected increase in freight rates on February 1. Now that this increase has been postponed there has been a slight falling off in orders.

Eastern Canada

About the most important feature in connection with the Eastern Canadian trade is the reported decision from Ottawa to the effect that no more wooden vessels are to be constructed in Eastern Canada owing to the excessive cost of construction. Wholesalers who have worked up a good trade in shipbuilding material will be hard hit if this is an authentic decision by the Imperial Munitions Board.

As regards market conditions generally there is very little to report. The car shortage is having a strong influence on the situation. Embargoes and various other restrictions hamper trade with the United States. There is said to be a good demand from the States, but the difficulties of getting lumber across the border are almost insuperable. Prices on all items remain firm and the opinion is prevalent that before long they will advance.

Bad weather, lack of building and transportation difficulties have exercised a very quieting effect on the Boston market. Quotations on spruce frames are made with \$40 as a base. A large demand has sprung up in New England for spruce stock for aeroplanes, and the price being paid for this material is said to be around \$100 at the mill. The price of random is going up slightly with some dealers. The hemlock market is marked by very high prices, and a good demand is being experienced. The lath and shingle markets are quiet.

Great Britain

While the prospects for trade for 1918 in Great Britain are poor, the business of the moment is considerably better than was thought possible, even a couple of months ago. In reviewing the situation, an English exchange says: "Trade with Canada and the United States will be out of the question, as there will be no tonnage available for the transportation of wood over the Atlantic; the Russian trade, if there is any, will probably be monopolized by the Government; and the Baltic business appears likely to be more than ever under the control of the Germans. There remains, therefore, only the business which can be concluded from the West Coast of Scandinavia in neutral steamers. Thus, for private firms, prospects are very limited, and the position is rendered still more unsatisfactory by the doubt whether even this limited business will not be interfered with by the Government buyer. This official competition is what the trade must fight

against, and if a large number of firms are not to be ruined the trade must be successful."

The interest which was recently excited by the advance in the rate of exchange between Great Britain and Scandinavia has disappeared for the moment. The Scandinavian exchanges at present are comparatively stable. Importers believe that as long as the exchange remains at its present rate and freights do not rise further, it will be possible to purchase timber and make a profit on the transaction. They state that while this profit cannot be large, 10 per cent. at most, it will be sufficient to make the trade worth going after.

There are no features of interest in connection with the Liverpool market. Small stocks of timber continue to find their way to this port, but the quantity is not sufficient to make any change in values. The home-grown timber market is said to be strong, with a good demand for all kinds of oak, ash, elm, etc. The same difficulty is apparent, however, in Great Britain as elsewhere; labor and transportation troubles make the handling of timber decidedly difficult.

In the Manchester district the trade has settled down after the holidays, and while the prospects are none too rosy, yet importers are hopeful that better times are in store. The spruce market is practically bare and the outlook for obtaining shipments uncertain. Only shipments required for urgent Government orders are allowed freight room at present.

United States

Cold weather and severe snow storms still have a detrimental effect upon operations, and the volume of business has been considerably restricted. Now that the "heatless Mondays" are a thing of the past, trade will likely become brisker and production increased. The car shortage is still acute. The demand for Douglas fir for shipbuilding and airplane work is increasing and production is being speeded up. The government is making large calls for the wood and so much of every log sawn goes into special orders, that not a great deal is left to be worked up into yard stock.

Prices on cypress are firm and well maintained and, while the volume of domestic orders is not heavy, the mills are worrying chiefly about getting transportation to fill government business which they have on hand, in some cases the orders being many months old.

The mills in the east are turning their attention particularly to spruce. Owing to the trouble of getting southern pine and other woods in the south, by reason of embargoes and freight tie-up generally, spruce is being substituted for a number of other woods. Manufacturers are not having any difficulty in getting rid of their cuts in spruce.

The stock of white pine in the north is less than usual at this season and the cut of 1918 will be smaller than last year. Prices remain unchanged and bad weather has recently interfered with the demand for yard stock. The requisitions for hardwoods keep up well and, while added interest is revealed by domestic consumers, the greater portion of the buying is associated with government orders. Along the Ohio River much damage has been done by the ice gorges, but this means that logs will soon be coming down in plentiful quantities.

Prices on hemlock show no change and trade has been rather quiet during the past two weeks, with the exception of in the East, where there was considerable business done. Many housing projects are being planned which will, if carried out, result in an increased call for hemlock.

In southern pine, production increases slowly, and has not been keeping up with the volume of orders that are being placed. The most important factor is that the Federal Trade Commission recently authorized an advance of \$1.09 per thousand feet. It is contended that the increased cost of production justified the jump. Trouble in getting cars to fill government requirements is still felt. In North Carolina, pine production is away down and in January was the lightest for some years. The government lately authorized an increase of one dollar per thousand. In regard to Western pine the mills in California have all the business they can attend to. Several large plants that usually closed down at this particular season, are running. The car situation has improved somewhat but is not yet as good as desired. A group of twenty-six Inland Empire mills received orders for 14,825,000 feet for one week, shipped 17,825,655 feet, and produced 12,343,613 feet. Production was slightly more than 50 per cent. of normal and represents a good increase over that of the preceding week. This same group of mills have orders on hand for 4,010 cars, estimated to call for over 100,000,000 feet.

Market Correspondence

**SPECIAL REPORTS
ON CONDITIONS AT
HOME AND ABROAD**

Ottawa Trade is Becoming More Active

Ottawa, February 8th (Special to the Canada Lumberman):—The Ottawa lumber market during the opening period of February became stronger and increased in firmness as compared with the last two weeks of January. The belief that prices will go higher is indicated by some recent transactions at Montreal for the sale of one and a half million feet which brought record prices.

The transportation problem proved the great handicap for export business. The car situation showed improvement over January, but the highly unfavorable weather conditions offset the usefulness of the increased number of cars available, and greatly hampered the delivery of shipments. The local demand was quiet. No improvement was shown in grades suitable for building purposes. The market for sash and door stock remained inactive. Dry stocks continued to decrease, but a serious scarcity has not yet become apparent. Inquiries and orders remained about normal as compared with the last two weeks of January.

Another increase in the number of embargoes at United States destinations, was instanced by the trade. One lumberman reported that he had been advised many embargoes had been applied recently to points west of New York. Another trade rumor was that the Detroit and Niagara frontiers had recently been closed to shipments of lumber.

The demand for lumber for export continued good. A large quantity of stock already sold awaited shipment.

The order of the Fuel Controller installing Canada's first "heatless days," caused John R. Booth and E. B. Eddy to suspend operations. W. C. Edwards, McAuliffe-Davis, Estate of James Davidson, George M. Mason, and Oliver and Son operated, as their fuel was produced by mill operation or electricity was employed. By running some of these plants supplied many loads of wood fuel to alleviate the acute fuel situation.

It was reported by the trade that new contracts for shell boxes may be let by the Imperial Munitions Board about March 1st. The woods labor situation generally remained unchanged.

John R. Booth has suffered heavily from the car shortage in two ways. One that export orders of lumber do not move rapidly, and the other that no cars were available to bring pulpwood from the Parry Sound, Madawaska and Gatineau Valley districts to the mill. Mr. C. Jackson Booth denied the press despatch of February 5th, that the Booth plant would have to shut down in a "few days" on account of pulpwood not being available. In explaining the situation Mr. Booth said that the car shortage was materially hindering operations and cars to bring pulpwood to the mill were practically unobtainable. The supply of pulpwood on hand, he added, was sufficient to ensure the operation of the paper mill for two or three weeks. About twenty carloads of pulpwood per day are consumed. In the event of the wood shortage becoming more acute a number of the machines would be shut down in preference to closing the mill entirely. Mr. Booth estimated about 100 tons of coal was saved by the "heatless days." The saving of the E. B. Eddy Company amounted to about two hundred tons. The woods labor situation with John R. Booth continued unsatisfactory.

Estate of James Davidson report that their woods operations are proceeding favorably. Hauling was commenced the first part of the month. Steady progress is being made on the big shell box order that the plant is working on.

Conditions with the Hawkesbury Lumber Company showed no change since the last report.

The Rideau Lumber Company reported very little shipping being done during the first part of February owing to the scarcity of cars and the adverse weather conditions. Inquiries and orders were said to be as numerous as during the closing period of January.

Gilmour and Company say there had been an improvement in the car situation. This company completed some large sales recently at the high prices. They declare that all indications point toward higher prices and a continued firm market. Export sales were reported as continuing satisfactory.

The McAuliffe-Davis Lumber Company report the retail trade slow, and difficulty in making shipments to the United States. The local outlook for retail business is none too bright, owing to the curtailment of building operations.

Oliver and Sons say that there is a slackening of operations. Their plant is completing a large shell box contract. There is a fair demand for furniture.

Montreal Markets—Car Shortage Still Acute

Montreal, February 9.—(Special to the Canadian Lumberman.)—Little or no variation is to be reported in market conditions. The car position is having a strong influence on business, both local and with the United States. The former is almost dead, as will be gathered from the building permits for last month. The total for that period was \$116,100, of which \$70,020 were for alterations; the comparison is with a total of \$249,895 in the corresponding month last year.

The car shortage, embargoes, and restrictions combine to hamper trade with the United States. The demand is there, but it is almost impossible to get lumber across the border.

Prices are as firm as ever, and there is a consensus of opinion that we shall see no set-back in this respect. Prospects are that they will still further advance.

It is reported from Ottawa that no further orders for wooden vessels will be placed in the East by the Imperial Munitions Board. The ground for this decision is stated to be excessive cost of building as compared with steel vessels. This will be a severe jolt to many wholesalers in Montreal, who have developed quite a nice business in British Columbia lumber for wooden vessels.

The demand for general British Columbia stocks have lately picked up a bit. Hardwoods are a very slow market.

The sulphite market remains much about the same. The mills are handicapped by the shortage of cars and also the coal situation. Mr. Carl Riordon states that imports from Europe to the United States have now practically ceased, but this has had no effect upon prices there. With increased cost of raw materials ruling, prices should be maintained. Large stocks are on hand, but the great bulk of these have been sold. It is probable that Great Britain will be a much larger buyer, and, with anything like fair railway and fuel conditions, the outlook for the present year is satisfactory. Stocks of mechanical pulp have decreased, and at the end of the year were about half of those of a year ago.

Forest Engineers Hold Successful Convention

The second annual convention of the Quebec Association of Forest Engineers was held at Laval University, Quebec, recently. This association, which was originally formed by graduates of the School of Forestry, Quebec, now represents all the professional and scientific interests in the solution of forest problems. The recent gathering was attended by all the active, and many associate members. The various sessions were profitable and instructive and the papers read were able and thoughtful, while lively discussions added to the success and inspiration of the convention. The officers elected for the coming year were:—

President—H. Roy, B.A., F.E., Forest Service.

Vice-presidents—O. Lussier, B.A., F.E., Amos.

Secretary—G. Maheux, B.A., F.E., Forest School.

Treasurer—H. Lavoie, F.E., Quebec.

Corresponding Secretary—G. Tessier, F.E., La Tuque.

Among the speakers and the subjects which they contributed were:—President's address, H. Roy, Chief of Soil Section, Forest Service, Quebec; "Origin of the Forest Private Property," Prof. J. Bouffard, K.C., Forest School; "The Seigneurs Joly de Lotbiniere's Forest Domain," L. Garneau, Forest Service; "Forest Echoes," Dr. J. C. Chapais, associate member, St. Denis-en-bas; "Forest Protection Against Fire," B. Guerin, Supt. S. W. F. P. A., Quebec; "Tree Planting Along Our National Highways," E. Gravel, Forest Service; "Insects Injurious to Ornamental Trees," Prof. G. Maheux, Forest School; "Facts About the Association and Its Members," Prof. G. C. Piche, Forest School; "Which Kinds of Trees to Choose for Ornamental Plantations," O. Bedard, Forest Service.

The convention was closed by a dinner tendered by the Association, during which a symposium was given on the subject or "Forest Engineers Employed by Lumber Companies, Their Work, Relations and Opportunities." Many members spoke on this subject, among them, G. Boisvert, Forester for the St. Lawrence Pulp Co., Chandler; J. R. Gareau, Forester for the J. B. Snowball Co., Chatham, N.B., and J. J. Guay, Forestry Department, Spanish River Pulp and Paper Co., Sault Ste. Marie. The report of the meeting will be published in the near future and will be distributed on request to the secretary of the association. The next convention will take place in July, at Berthierville, Que.

Service and Co-operation Keynote in the West

Western Lumbermen Listen to Stirring Addresses and Practical Suggestions—Proposed Freight Rate Increase Strongly Opposed

W. A. McIlrath, Radville, Sask.,
The Newly Elected President

Animated with the ideals imparted by the various speakers and inspired by the enthusiasm which characterized the proceedings, nearly 300 delegates attended the 27th annual convention of the Western Retail Lumbermen's Association. The sessions were held at the Royal Alexandra Hotel, Winnipeg, and the gathering was representative of every community from that city to the coast. Owing to the absence of the president, J. F. Carpenter, Yorkton, Sask., Wm. Thorne, of Winnipeg, vice-president of the association, presided. The delegates were heartily welcomed to the Prairie Capital by Sir J. A. M. Aikins, Lieutenant-Governor of Manitoba. In the course of his address vice-president Thorne referred to the history of the association, and touched upon a number of important matters.

"We should at this convention take active steps to bring up the discussion of mail order competition. This old hobby of telling your customer that he should or must deal with you because you are a heavy taxpayer, supporter of schools, builder of good roads, etc., is no good any more. It served its purpose once. We, as retailers, must make our SERVICE get us the business. We must study the best means of dealing with this competition. We must learn the art of salesmanship; we must advertise, and advertise rightly. Too much advertising is done in the country newspapers that is absolutely useless. Why? Because the advertisements are too seldom changed; because they don't say or mean anything. You have to put some pep into your advertising to get results. We must establish a community service. We must educate, through this service, our members to be the leading men in their community, because it is a well-known fact that mail order houses do not operate as keenly in districts where the merchants are a bunch of good, bright, aggressive business men, working together. Manitoba is the meat of the mail order houses, on account of the numerous sidings and small places without a lumber yard. I believe the association ought to engage an expert community service and advertising man.

I believe it is my duty to refer to the sign of the times. The past two years have been fairly prosperous for the lumbermen, but the past three months' collection records have shown the necessity for careful thought with regard to the further extension of credits. To cover this point I will read what one of the high officials in one of the leading banks of Canada recently said: "Farmers are receiving exceedingly high prices for everything they produce, and should be in a position to pay their accounts. It is very much in the interest of the community at large that advantage be taken of the present situation to collect outstanding accounts, especially those who have in the past been inclined to be slow. Farmers have heretofore been, as you know, considered dilatory in their payments, even when in a position to pay, but if their accounts are allowed to run until conditions change, on account of unsatisfactory crops, lower prices, or for any other reason, merchants will have to face hard times, with large accounts outstanding, having lost the opportunity of putting their business upon a safe and sound footing during the period of agricultural and business prosperity."

The report of the secretary, N. G. Neill, showed that there has been an increase of 45 yards during the year 1917 enrolled in the association. He said that district meetings of much interest had been held during 1917 at Brandon, Yorkton, Regina, Prince Albert and Calgary, and a trip was made to the coast, where a conference had been held with the coast manufacturers in the matter of grading rules, inspection, shingles, code of ethics, minimum cars, and terms.

Mr. Neill in the course of his report, reviewed many other matters of importance, and said that the lack of adequate grading rules is causing a great deal of inconvenience among the retailers, and the training course, which the Retailers' Association had introduced, is, at

the present time, held up owing to the lack of these grading rules, as they would not like to have the course go to press without the coast grading rules being embodied. The present terms of 2 per cent. 15 days, the retailers submitted, are not in accordance with present practices and do not conform to conditions. They would appreciate very much the terms being enlarged.

New Freight Rates are Opposed

A resolution was adopted dealing with the matter of freight rates and opposing the 15 per cent. increase. The resolution was as follows:

The Western Retail Lumbermen's Association desire to join with the other interests which are opposing the order of the Board of Railway Commissioners, providing for an increase of 15 per cent. on all freight rates, and respectfully submit:

(a) In view of the ample evidence submitted in this matter, especially at Winnipeg, proving conclusively that the road which would gain most from this proposed increase was in such a financial position that, notwithstanding the increase in cost of operating, it did not require this increased revenue, so that the increase being only required by the C. N. R. and G. T. P., which are now practically owned by the Government of Canada, we would respectfully submit that, if, as Mr. Hanna frankly admits in his evidence, incorporated in the judgment of this matter, this increase is for the purpose of meeting financial difficulties and increased cost of commodities, then the Government of Canada should deal with the matter entirely aside from the increased rates, and the order should be rescinded for the following reasons:

(a) The increase is supposed to be a war measure and was made on that basis.

(b) This being so, it should have been, we submit, enforced at once, if an all, whereas eight of the best earning months were allowed to elapse.

(c) It is not expressed to be a war measure, and inoperative at the termination of the war, as many other acts and orders, made to meet the extraordinary conditions prevailing, are made.

You will readily appreciate the difficulty in obtaining a reduction unless some such provision is made which is best evidenced by the long expensive and bitter fight which was experienced by the Western Provinces some years ago in the Western freight rates case.

The judgment purports to put the increase in effect at once. This is manifestly unfair as no time is allowed for material to be moved which had been purchased, in many cases, under a contract based on the old rate. This circumstance is particularly applicable in the lumber trade, where purchases are often made from six months to a year before delivery.

(d) The judgment admits that the increase is not sufficient for the purposes for which it is intended, and the amount appears to have been arbitrarily fixed without any definite evidence to support that amount, rather than a lesser or greater amount, and we respectfully submit that if the day of reckoning has now come for the past extravagance, it should be met in some other way than in an increase of rates, which will necessarily throw into the hands of a company that does not need it, a large proportion of the money to be raised by such increase, whereas, by the adoption of some other method, the whole of such money might be obtained by the Dominion Government, thereby making it a truly war measure.

The increase is not uniform in that where Canadian lines are competing with American lines, no increase was ordered.

(e) That the order is beyond the powers of the Board, in that it purports to interfere with provincial rights, acquired by the provinces under agreement with the railways, and no opportunity was afforded the provinces of being heard on the application therefor.

(f) That the order should have been merely a recommendation to the Governor-General in Council, whereas it is, in fact, an order absolutely bringing into effect such rate increase. This would, if given effect, deprive many of those interested of the right of being heard, and of raising a number of points which it does not appear to have been in the power of the Board to consider, such as the question of raising the requisite funds in other manners than that proposed.

(g) It is respectfully submitted that the true basis of fixing rates is on the minimum cost of operating, and not the maximum. That being so, and the evidence of the C. P. R. showing that their lines are operating at a profit, there is then no foundation for the order, on the basis that the increase is required to meet increased cost of operation. And if certain portions of the other two lines are not paying, that such loss should be met in some other way, either by their entire elimination, or by the elimination of one of the two, where they parallel each other. And it is respectfully submitted that this order has not been made on that basis.

(h) This increase coming into force,

N. G. Neill,
Re-elected Secretary-Treasurer

as it does now, at a time when the value is about to be placed on the stock of the Canadian Northern Railway, may be the means and may be made use of by the owners of that stock, as a ground for inflating the value of such stock beyond its true value if such increase is, as is to be inferred from the judgment of the Board of Railway Commissioners, one more in the nature of a tax for the benefit of the government or a war-time measure, than as a benefit to the individual company.

As an alternative, we would respectfully submit a great portion of the lines of the two railways, owned or controlled by the government, which either parallel each other, or are running through country not requiring railway facilities at the present time, could be taken up, then, by greatly reducing the cost of operating and maintenance of equipment, and the material derived therefrom could be used in the repair and maintenance of the remaining line.

Or, as a further alternative, we would respectfully suggest, if an increase must be made in the rates as a war measure, that it be made by a special tax of whatever amount may be thought fair to be added to each freight bill, based on a percentage of the bill, and collected by the company at the time of the collection of the bill, and by the company paid over to the government, to be used for such purposes as the government may deem proper. Such tax to be one for the duration of the war, and imposed as a war measure, similar to the stamp fees on cheques, tax on passenger railway tickets, and telegrams.

We would respectfully draw your attention to two facts:

(a) The Canadian Pacific Railway were not represented at the hearing of this matter at Winnipeg, and took no part in it, showing that they were not pressing the matter, and no application on the part of the company is referred to in the judgment.

(b) A great number of interests, particularly in Western Canada, are opposed to the increase, while a number have, on the other hand, acquiesced in it, particularly the Canadian Manufacturers' Association, which latter appears to have based its position on the fact that the increase was for the purpose of enabling the railways to continue to render efficient transportation, whereas, such was not the basis of the application, as shown by the evidence of Mr. Hanna, given in support of the application of the Canadian Northern Railway, and referred to in the judgment.

Other resolutions passed dealt with coal, transportation, the unifying of legislation in Canada, the supplying of adequate and sufficient labor for the construction of farm buildings and a resolution of a patriotic character as follows:—We again take the opportunity at our 27th annual meeting of placing ourselves on record as willing and anxious to do everything within our power to assist in prosecuting the war for the freedom and democracy of the world to a successful termination.

Another resolution was:—Recognizing the fact that cedar shingles, when properly manufactured, constitute a splendid and lasting roofing material; that the preserving of the shingle supply industry depends on the supply of properly manufactured and not over-dried shingles; and, moreover, realizing the fact that, should cedar shingles be poorly manufactured and over-dried, and in that condition sold by the retail lumbermen, a reaction against use of shingles will be encouraged, and detrimentally affect retail lumbermen handling and selling such manufacture; we do, therefore, place ourselves on record as opposed to any cedar shingle being shipped to Western Canada unless they have been properly inspected, and are of first-class manufacture, according to the shingle regulation, and that they weigh not less than 150 pounds per thousand upon delivery; and, in view of the detrimental effect that the sale of poorly manufactured and over-dried shingles will have on our further trade, we do most earnestly recommend to all retail dealers that they specify on their order that all 6/2 shingles shall weigh not less than 150 pounds; and copy of this resolution be forwarded to the Shingle Agency of British Columbia, Vancouver, and the West Coast Lumbermen's Association, Seattle, and placed prominently before all lumber dealers in Western Canada; and we do hereby agree to abide by the interest of the resolution until such time as it shall be properly rescinded at an annual or special meeting of the association.

Retail Dealer Should Give Service

In the afternoon session of the first day an excellent address was given by W. A. McIlrath, Radville, Sask., on "Selling Houses and Barns in the Place of Lumber." "The retail trade is knocking at our doors," said Mr. McIlrath. "The retail lumber trade is not asking that we carry bigger stocks. Our customers are more than ready to co-operate and adjust their needs to the staple lines. They are not asking for bigger plants, with steam-heated offices and carpeted floors. They are not asking that we give our yard manager an assistant that he may be loaded up and on his way quicker, but he is persistently knocking at our doors and asking for a SERVICE that we are not giving him, that is, the SERVICE of putting yourself in the customer's place and seeing things as he sees them and entering into the life as he sees it. We owe it to our customers to see that our offices are not dingy, dusty places. Did any of you dealers ever go to one of your yards and find the manager running an advertisement in the paper, "We are headquarters for lumber, lath, shingles, brick, etc.," and then go into his office and find it either decorated like a high school girl's bedroom or bedecked with ancient calendars? I have found our own yards in just this condition, and every one of you have just such offices. Yet we talk of being headquarters and of giving SERVICE when everything about the place would show that not a single thought had been given as to how you could be of any benefit or show a single kindness even to the best of your customers."

W. B. Clarkson, who is the chairman of the Committee on Ventilation of Farm Buildings of the American Society of Agricultural Engineers, and is a representative of the King Ventilating Company, gave an interesting address on the subject of "Ventilation."

At the evening session W. P. Dutton, of Winnipeg, favored with an address and reported on the business conditions in Manitoba, and J. G. Haney, superintendent of the Extension Department of the International Harvester Company, gave a rousing talk on "How to Increase Your Business." The address was illustrated by over 2,000 feet of moving picture film. Mr. Haney said there was never a more favorable outlook for the farmer than at the present time and that the farmers of the northwest would buy in proportion to their needs and ability. Lumber was the great means of showing farm prosperity. There is room on most farms for improvement in farm buildings, especially as to arrangement and proper ventilation.

In this climate, buildings should be built according to the latest information regarding sanitation and ventilation. In many farm barns, and houses too, little or no attention has been given these things. If they are built well enough to be warm, they are unhealthful because of no ventilation.

A Survey of the Future

At the second day's session F. E. Sine, of the Atlas Lumber Company, Calgary, spoke ably on "Preparing for the Future from the Experience of the Past." We know that any work along the lines of pictorial advertising that we may want done can be sent to the association office, with our ideas as to what we want done, and they will do the rest. With the experience we have had I am confident that the new advertising department will be a success if its services are used liberally by the members. I am not disposed to try to give any opinion of how to prepare for the future as to general business, for, as I stated before, the experience the world has gone through during the past three years has knocked all ideas on this subject into a cocked hat. There is one thing, however, I do believe every business man should do—that is, to put his business into as liquid a condition as possible—in other words, liquidate his indebtedness as rapidly as possible, but not so rapid as to cause him to become panicky. A dollar to-day will only buy fifty cents' worth of merchandise, based upon pre-war standards, but that same fifty-cent dollar will buy one hundred cents of indebtedness. None of us has had past experience that will indicate to us what conditions after the war will be. We cannot predict what business conditions will be like if the war continues for the next two years, but I think we should all agree to so conduct our business as to put it in the best possible condition to give the greatest service to our country when it is called for.

W. E. Moore, of the Lumber Manufacturers' Yards, Regina, Sask., talked along the same lines. We cannot, he said, look forward to another homestead period, as that is gone in this country never to return, and we certainly do not wish another war to make our collections possible. The credit managers of practically all the retail lumber interests will meet to devise ways and means to standardize future credits. Let us all get behind them and make their efforts effective for the future handling of our credits. I could write volumes, and so could all of you, on actual experiences in handling credits in this and other countries. The government needs every ounce of energy we have in us, so do not let us waste an ounce of it on the collection of bad and doubtful accounts on future sales. Let us be patriotic, and show our customers how necessary it is for them and all of us to be economical and saving, and keep out of debt. Our government will need every dollar's worth of credit we can supply them, so do not let us waste our money or our energy, but preserve both for the benefit of our government. Let us get the spirit of co-operation into this convention and when we return to our places of business we can enthruse every employee so that they will exert every ounce of energy they have to make the business they represent, in the town where located, a necessity. Let us show the customers that our agent and the business they represent are needed in that community. Let us make more than machines out of our agents; let us help make them a salesman, an adviser, a good citizen, a necessity, and a part of the community in which they live.

"How to Increase the Demand for Red Cedar Shingles," was the subject contributed by J. S. Williams, secretary of the West Coast Lumbermen's Association, Seattle, Wash. The wooden shingle has another enemy—nails—the common garden variety of ordinary wire nails. Wire nails, I honestly believe, have been more largely responsible for giving wood shingles a black eye than any other thing. If I were a retail dealer I would make it so almighty hard for a customer of mine to get wire shingle nails that he would never be tempted by their low price. And galvanized wire nails are but little better. Four years—five years—possibly six years—and a sufficient number of the nails have rusted out to cause leaks in the roof, and the farmer or home-owner gives wood shingles the devil, when he should have given you the devil for selling him wire nails. Use zinc-coated nails, pure iron nails, or copper nails, but never wire nails. What does \$2

The Arctic Eiderdown Sleeping Robe

"Living the out door life in comfort."

GUARANTEES PERFECT SATISFACTION—ALWAYS.

Of the thousands of these robes sold we have never had one returned, nor in any way condemned.

The Arctic Eiderdown Robe is absolutely wind and moisture proof. Frost cannot penetrate it. It is positively sanitary—the more sun and air it is given the more resilient and thicker it will become.

Hunters, Motorists, Woodsmen and Lumbermen should never be without one. It can be slept on, in or under.

Its weight is almost nil, while its advantages are many.

Smart-Woods LIMITED

Ottawa - Montreal - Toronto - Winnipeg

ANNOUNCEMENT!

The St. Catharines Plant and business of The Jenckes Machine Co., Limited, have been acquired by Engineering & Machine Works of Canada, Limited, newly formed for the purpose.

No change is contemplated in the management, staff or shop organization and the same careful attention will be paid to all enquiries and orders.

The Head Office will be at St. Catharines and Sales Offices will be maintained at 710 C.P.R. Building, Toronto, with Mr. C. G. Horton in charge, and at 344 St. James Street, Montreal, with Mr. G. L. Burritt in charge.

Engineering & Machine Works of Canada Limited

General Office and Works

ST. CATHARINES, ONT.

or \$3 amount to in the difference of cost of nails if by spending this amount you can prolong the life of a roof for twenty or twenty-five years? If I could get you retailers to take home just this one idea with you of refusing to sell wire shingle nails, I would feel that I had had a mighty successful trip to your convention.

Now, I don't know how much of a hold the patent roofing people are getting in your territory, but it's a safe bet that if they are not already busy they soon will be, making a mighty keen bid for business. And, when they do, they usually get a part of what they go after. Now, how do you receive the propositions of the patent roofing manufacturers? On the basis of progressive advertising and up-to-date merchandizing methods it certainly would be to your advantage to push patent roofing products. But on the basis of satisfaction to the customer (if you intend staying in the lumber business) you can't afford to sell patent roofings for other than flat roofs of purely temporary construction. I know that the code of ethics of your association would not be other than telling the truth about your products, and the truth is all in favor of Western red cedar shingles.

Officers for Coming Year

The election of officers for the coming year resulted as follows:— President, W. McIlrath, of Radville, Sask.; vice-president, Chas. J. Lee, Winnipeg; secretary-treasurer, N. G. Neill, Winnipeg. The new directors are:—

Alberta—H. Skova, High River; F. E. Sine, Calgary; H. B. Armitage, Canora. Saskatchewan—F. W. Ritter, Prince Albert; A. W. Jones, Moose Jaw; H. E. Meilicke, Saskatoon. Manitoba—Messrs. Stewart, Frost, and Theo. Sparks.

A discussion then took place as to where the next annual meeting should be held. The Calgary men strongly recommended that it be held there, and a communication was read from the Board of Trade of that city inviting the association to hold its next annual meeting there, but no action was taken. The matter was left over for a committee to report upon.

Mr. A. L. Struthers again delivered an address on "Business Psychology," after which the delegates adjourned to the convention hall to hear one of the best addresses given in Western Canada in a long time. It was delivered by Senator Frank A. Chase, who is vice-president of the National Builders' Bureau, Minneapolis, Minn. This bureau is designed to sell service, ideas, and merchandise to the retail dealers in building material. Mr. Chase is a member of the Washington State Legislature and a student of business economics.

Our relation to the nation in times of peace is a matter the importance of which is not generally appreciated as it should be, nor, in fact, to the extent it will be when the war is over; but right now the question for each of us is: "In what way can I best serve the nation?" Under the circumstances, performance of duty and the acceptance of responsibilities is considered a privilege, and it is in that sense our privilege as business men to develop true efficiency, aid in the maximum production of all essentials, and likewise to insure their conservation. More production, less waste; more efficiency, less lost motion; acceptance of modern methods and business aids, rejection of antiquated hindrances.

What is your evident duty in the matter, not only as a business man, but also as a citizen?

"You must help them by foreseeing their needs and preparing to do whatever may be required in each case to enable them to build. Many mechanics in city and town are lacking adequate employment. List and make use of those in your locality who will build these farm buildings; arrange on a proper basis to deliver material wherever and whenever needed; get acquainted with your farmer neighbors; anticipate their needs, plan their buildings, help them build. Will you do it? Bear in mind in considering the business situation: Your customers, especially in farming communities, are prepared to pay prices for lumber and service that will add to your profit and enable you to more liberally support the financial program of the government; but unless you render the added service that is now required the use of building material will be restricted, your profits reduced, and enormous loss to the nation will result from the lack of proper housing for stock, crops, and farm machinery.

Let me call your attention to some of the after-war problems, such as: The reabsorption of our tremendous fighting forces into our civic life and providing for them the opportunity they deserve, and are justified in demanding, to appropriately re-establish themselves; the labor question; the suppression of syndicalism and every other form of class autocracy, not less fraught with danger possibly to the future of the world than is the terrible war from which we are now suffering untold agony.

The financial and commercial rehabilitation of the world; the removal of emergency regulations so willingly accepted under present conditions, but which are unthinkable under a democratic government in times of peace.

These problems, already mentioned, are, I trust, of such importance

as to readily convince any lumberman, any citizen, that his relation to the nation will continue an important subject for a long time to come, and, indeed, it should never be ignored.

How are these and other imminent and serious problems to be met? I know of but one adequate answer, and that is by every member of an intelligent God-fearing citizenship taking an active, intelligent interest in public affairs, and considering it no less his duty to serve the nation in any needful capacity in times of peace than to enroll under its banner in times of armed conflict.

The Retail Lumbermen's Purchasing Agency held its annual meeting during the afternoon. Alfred B. Estlin was elected president, A. K. Agnew, manager, and F. H. Lemar, secretary.

The Western Retail Lumbermen's Fire Insurance Company held its 12th annual meeting during the third day's session of the convention.

The president, Mr. J. B. Sinclair, of the Beaver Lumber Company, Ltd., Winnipeg, stated that he thought it was unnecessary for him to make any address. The secretary then presented the annual statement. He pointed out the fact that the company had written over \$300,000 of new business, part of which is accounted for by the advance in price of lumber, but mostly from new business. He also drew the attention of the members to the fact that, although the amount of interest earned during the year was less than last year, yet it has more than paid the running expenses of the company.

A general discussion then took place on the advisability of raising the amount that the company should carry on each point, and the feasibility of putting in a flat rate. The consensus of opinion with respect to raising the amount of the policies was that the \$7,000 limit was plenty, and, rather than raise it, the reducing of the limit should be thoroughly gone into. Regarding the adopting of a flat rate, it did not seem to be at all feasible to the members present.

The Western Retail Lumbermen's Association heard a report and recommendations, prepared by Messrs. C. J. Lee, J. A. Wilson, W. P. Dutton, and D. B. Jones, on standardized terms of sales.

One of the most animated discussions of the convention centered around this problem of standardized credits. Such a policy has engaged the attention of the association almost from its inception, and the many difficulties have often caused earnest thought on the part of the most alert members. The following was submitted:

October 15th, 1918.

To Our Customers:

TERMS ON LUMBER AND BUILDING MATERIAL

On and after November 1st, and until April 1st, 1919, lumber and building material will only be sold for CASH, or on 30-day terms.

For Cash on Delivery a 5 per cent. discount will be allowed. It is decided economy for you to pay the cash, but it must be paid at the time of taking delivery to get the discount.

The crop is now harvested, and money available; so that these terms will undoubtedly meet your needs.

Lumber Company

Suggestion of Memo. for Customers.

February 1st, 1918.

To Our Customers:

TERMS ON LUMBER AND BUILDING MATERIAL

To encourage payment of CASH ON DELIVERY, a discount of 5 per cent. off all lumber and building material is being given. This applies only when paid at the time the material is taken out.

It is good economy for you to take advantage of this discount; it is also good economy for us, as CASH ON DELIVERY saves us book-keeping, collecting expense, interest charges, and some bad debts.

As for buying material on CREDIT, while war-time conditions exist all accounts contracted must be settled in cash, within 90 days. If (for any unavoidable reason) this cannot be done, a note will be required, bearing interest at 10 per cent., payable October 1st, and full settlement made out of the current year's crop.

Under present conditions, we ask our customers to carefully note these terms.

Lumber Company.

MEMORANDUM FOR DEALERS OF SUGGESTED "STANDARDIZED TERMS OF SALE"

1. That the term CASH shall mean cash on delivery.
 2. That the term CREDIT shall mean not longer than 90 days.
 3. That no CREDIT shall mature later than 1st of November.
 4. That a cash "clean-up" shall be made within the year; otherwise no further credit given.
 5. That business in November, December, January, February, and March shall be on a CASH, or within 30 days basis.
 6. That interest at 10 per cent. per annum shall commence after 90 days, and a note should be taken at that time.
 7. That for CASH ON DELIVERY a 5 per cent. discount shall be allowed off all material on bills up to \$300.
- That for CASH ON DELIVERY an extra 5 per cent. shall be allowed on bills over \$300.

J. A. Wilson read the memorandum, and, after the copies had been distributed among the members the chairman urged the various delegates to discuss the ideas thus advanced in every detail. He emphasized the importance of the subject, but warned the dealers present that any objection entertained should be stated with definite

EDGINGS

Ontario

Manley Chew, of Midland, is spending several weeks in the Southern States.

Sir Henry and Lady Egan, of Ottawa, left recently to spend a few months in California.

The C. B. Williams Company, Ltd., 11 St. Albans Street, Toronto, recently suffered a loss by fire to their planing mill, which is estimated at \$2,000.

The Board of Control, Ottawa, has contracted for 10,000 cords of wood for the civic fuel yard. The price will be \$5.75 per cord, f.o.b. Cascades Siding, Quebec, and the contract has been awarded to J. M. McAllister.

George Rivers, Strathroy, Ont., will rebuild his basket and berry box factory, which was recently destroyed by fire. Mr. Rivers will do all the work by day labor and will proceed as soon as possible.

The Nyando Pulp and Paper Corporation (of the State of Delaware, U.S. A.) has been incorporated to do business in Ontario, with head office at Fort William, Ont., and capital stock of \$1,000,000. They will manufacture pulp and paper, etc.

Concerning the report pertaining to the supply of ash trees for the British Government and the possibility of this material being used by the Imperial Munitions Board, the shipbuilding department of the board at Ottawa state that, at the present time, they are not in the market for this commodity. Should they be so in the near future they will get in touch with the proper authorities regarding the purchase of these trees.

A provincial charter has been granted to the McMaster Lumber Company, with headquarters in Kemptville, Ont., and capital stock of \$45,000. The incorporators are Robert D. McMaster, James McMaster, Morley F. Earle, and William C. Millar, all of Kemptville, and James Shaw, of Mountain, Ont. The company is empowered to manufacture and deal in rough lumber, timber, and logs of every kind and to take over the business of the McMaster Lumber Company.

Tenders were recently called by the city of Ottawa for a supply of several thousand cords of hardwood to lay in as an emergency fuel supply. The bids ranged from \$9.50 a cord up, undelivered. Among the tenders received was that of the Papineauville Lumber Company, two to three thousand cords of maple, oak, beech, birch, ash, and elm mixed, at \$10 a cord, delivered at Pointe au Chene by October 1, 1918.

Eastern Canada

The Pine Lake Lumber Company, Montreal, P.Q., has dissolved.

Mr. Arthur Campbell and Mr. William Rutherford have been re-elected members of the Council of the Montreal Board of Trade.

At the annual meeting of Smart-Woods, Ltd., held in Montreal, the name of the company was changed to Jute, Cotton, and Wool, Ltd.

The sawmill belonging to H. Favreau, 12 Erie Street, St. Pierre, P.Q., was recently completely destroyed by fire. The loss to the building is estimated at \$1,500.

Supplementary letters patent have been issued granting permission to the Port aux Quilles Lumber Company, Ltd., to increase their capital stock from \$100,000 to \$200,000.

A federal charter has been granted to the McNeil Lumber Company, with a capital stock of \$40,000 and head office in Quebec. The company is empowered to purchase, sell, and lease timber lands and to buy, sell, and trade in lumber, bark, wood, pulpwood, etc.

An extra provincial license has been granted the St. Maurice Lumber Company to do business in Ontario. The company, which has a charter under the Province of Quebec, has the power to deal in all kinds of pulp, paper, and lumber, and to purchase, deal, and operate timber licenses of any kind. The St. Maurice Lumber Company is authorized to expend a sum not exceeding \$60,000 in operations in Ontario. William Adams, of Cochrane, Ont., has been appointed their attorney for the province.

Earnings of Wayagamack Pulp and Paper Company, Ltd., Three Rivers, Que., for the year ended November 30, 1917, show a slight falling off as compared with 1916, the total before depreciation and interest being \$966,349, as against \$979,362 the previous year. In 1916, however, the company deducted \$90,000 from surplus for the business profits tax, while the tax for 1917 was apparently provided for before showing earnings. With allowance for the unknown tax factor in 1917, it may be presumed that if a more accurate basis of comparison were possible, the 1917 profits were actually slightly in excess of those for 1918.

Western Canada

The Seaside Lumber Company, Ltd., has been incorporated, with head office at Vancouver, B.C., and capital stock of \$12,000, to carry on business as timber merchants, loggers, and lumbermen; also to manufacture lumber from

every suitable material and by every possible process, and to deal in lumber, timber, sash, doors, shingles, etc.

The Citizens' Lumber Company, Lethbridge, Alta., has sold its yards at Pakowki, Alta., and Kincorth, Sask.

By the skidding of an automobile on a bridge over the Latta Ravine, at Edmonton, Alta., Howard Ritchie, son of J. W. Ritchie, of the Ritchie Lumber Company, Edmonton, was instantly killed.

Charles Wilker, of Rosthern, Sask., has removed to Langham, Sask., where he is laying out lumber yards and offices for the West Lumber and Supply Company, of Prince Albert, who have decided to locate in Langham.

The Quatsino Timber Company, Ltd., has been incorporated, with head office at Vancouver B.C., and capital stock of \$10,000, to carry on business as manufacturers of and dealers in sawlogs, timber, lumber, and wood of all kinds.

The H. M. K. Timber Company, Ltd., has been incorporated, with capital stock of \$10,000 and head office at Vancouver, B.C., to take over the interest of Fergus R. MacDonald and Noel Humphreys in a contract for ribbed spruce.

The sawmill belonging to the St. Elmo Lumber Company near Hope, B.C., on the Canadian Northern Railway, has been taken over by Emil Hallam and associates, and will be operated under the name of the Mountain Lumber Company.

R. S. Kellogg, secretary-manager of the National Lumber Manufacturers' Association, Chicago, for the past three years, has resigned in order to accept an invitation from the manufacturers of newsprint to become secretary of the Newsprint Service Bureau, New York City.

The Victoria Shipbuilding Company, Ltd., Victoria, B.C. (Point Ellice), are contemplating erecting an addition to their shipyards. The company has been awarded a contract to build twenty 3,500-ton ships for the Imperial Government, which makes it necessary to enlarge the plant.

Plans are in progress for the construction of a shipbuilding yard at Vancouver, B.C. (Hitchilano Reserve), by the British-American Shipbuilding and Engineering Company, Ltd., Hitsilano Reserve, Vancouver. The president of the company is J. A. Sears. The company has been awarded a contract for twenty 3,500-ton ships and must build shipyards. The site has been secured.

The Bainbridge Lumber Company, Ltd., has been incorporated, with head office at Victoria, B.C., and capital stock of \$500,000, to purchase, acquire, and take over the land and timber holdings and options upon land and timber in the Alberni District, B.C., of Clarence Hoard; also to carry on business as sawmill owners, loggers, lumbermen, and timber merchants and as manufacturers of and dealers in lumber, timber, lath, shingles, sash, and doors.

E. A. Engler, head of the Engler Lumber Company, of Baudette, Minn., recently stated that they had made arrangements with the Backus Company whereby the timber of the Engler Company, as well as that of the Backus people, would be cut at the mills at Spooner. Both firms have plenty of timber to last for years. The cost of cutting will be figured out and each of the concerns will bear its proportion. The mill will be run to its fullest capacity, and will employ at least 600 men during the coming summer. M. L. Elesmore, who has been superintendent of the International Lumber Company's sawmills, will be superintendent of the new union mill. It is likely that the site of the former plant at Baudette will be utilized before long for a box factory to take care of the by-products of the combined mill at Spooner.

A second paper-making unit is now being installed in the plant of Pacific Mills, Ltd., at Ocean Falls, on Couzen's Inlet, B.C. When this is in operation the capacity of the plant will be over 230 tons of newsprint and kraft paper daily. A modern sawmill of mammoth dimensions breaks down the pulp logs from the digestors after all the clear lumber has been taken off. At the present time considerable spruce aeroplane stock is produced, and plans are being perfected which will result in the output being very greatly increased. The starting of the second and larger unit means that the log output must be trebled at least, and, with the coming of spring, woods operations will be systematized and conducted on a very large scale. Orders for the necessary equipment—all of the most modern kind—were placed several months ago, and some of it has already been delivered. The company owns very extensive pulp limits, and will operate a standard-gauge railway and four or five powerful tugs.

A very busy outlook is reported for British Columbia pulp mills, according to R. O. Sweezy, of Montreal, who is inspecting engineer for the Royal Securities Corporation, and has been on a visit to the coast. He reports that the company is cutting from twelve to fifteen thousand feet of spruce every day. Only about 10 per cent. of the spruce log is suitable for aeroplane purposes, but there is no waste so far as the remainder is concerned, as it is used in the manufacture of pulp. The price for spruce for aeronautical purposes is around \$125 per thousand feet. The Whalen Company, Ltd., who operate plants at Swanson Bay, Quatsino, and Mill Creek, will, in the near future, have an average daily output of 200 tons of pulp. At Swanson Bay production is now 35 tons, which will be increased to 50, and at Mill Creek, within two months, over 100 tons will be turned out. At Quatsino the plant will soon be in full blast. The company intend building one of the largest tug boats on the coast, as well as a fleet of scows, in order to handle their business with greater despatch.

Service and Co-Operation Keynote in the West

(Continued from page 94)

detail, since the success of the plan depended wholly upon the united acceptance of the members. Without general co-operation no unity of action could be secured, President McIlrath explained. In fact, it was conceded that the practical methods adopted by the chairman in handling the discussion and his cautious rulings materially contributed to the successful headway made.

After some additional general discussion, President McIlrath asked if the delegates cared to have a vote put as to adopting the suggestions contained in the memorandum. There was no expression in that direction and no vote was put, the chairman suggesting that the members take the data home with them and think it over until the next convention.

At the close of the discussion W. P. Dutton then offered the following resolution, embodying some of the ideas indirectly brought out in the meeting of the credit men. It was adopted as the rule of the association, which was considered a step in the direction of united action in dealing with accounts by association members:

1. That a property statement, signed by the lumber agent or by the customer for every account opened; and that a committee, in conjunction with the secretary, shall draft a property statement form for the use of all dealers members of this association.
2. That further credit shall not be extended to customers who have failed to fully pay up the previous year's debts.
3. That we recognize the value of Dunn's weekly reports, and it is recommended that the secretary ascertain from the Dunn's mercantile agency on what basis they would furnish weekly reports for the use of all members of this association.

Expeditious Unloading of Cars

A resolution was passed dealing with the necessity of having every freight car loaded to capacity and also dealing with demurrage rules.

Among the visitors at the closing luncheon were: Horace Chevrier, Dominion president of the Retail Merchants' Association of Canada, Winnipeg; Thos. Witten, of Trenton, Mo.; J. H. Curle, secretary of the Manitoba Branch of the Retail Merchants' Association, and C. F. Rannard, honorary president of the Manitoba Branch of the Retail Manufacturers' Association. Mr. Witten gave a splendid address on "Developing the Community," and emphasized that every individual should render some service to the community apart from that which is intended to benefit him individually, and no person has a right to enjoy community benefits without rendering community service. In the afternoon the delegates were delighted with a visit from the coast manufacturers, mountain manufacturers and northern manufacturers.

The association invited its visitors to join with the dealers in a social evening in the ballroom of the Royal Alexandra Hotel. This was enjoyed by all, a splendid musical program having been arranged. A collection of \$200 was made from the delegates in aid of returned soldiers. "God Save the King" concluded the evening's entertainment.

What Does Uncle Sam Produce?

A census of the lumber production of the United States during 1917 will be made by the Forest Service in co-operation with the National Lumber Manufacturers' Association, as in past years. Questionnaires have already been mailed to the 30,000 sawmills throughout the country asking that the amount of each kind of lumber cut be reported promptly. It is pointed out by officials of the Forest Service that the lumber census is of particular importance at this time, because of the large quantities of special material needed for the conduct of the war. Several of the government departments, they say, depend upon the Forest Service for data and technical advice on subjects connected with lumber. Because of unsettled conditions in the lumber trade in 1917, it has been somewhat difficult to judge the current production. Heavy calls for lumber made by the Government have been partially offset by transportation difficulties and scarcity of labor. Officials say that it will require a careful census to determine whether the output was more or less than preceding years.

Companies Unite Under New Name

The Columbus Chain Company, with factories at Columbus, Ohio, and Lebanon, Pennsylvania, and the McKinnon Chain Company, with factories at Buffalo, New York and St. Catharines, Ont., have been united under the name of the Columbus McKinnon Chain Company. The new company have formed a Canadian organization, known as McKinnon Columbus Chain Limited, with general offices at St. Catharines, Ont. Besides offering the trade a full line of Electric Welded Chain, it is the intention, in the near future, to manufacture Fire Welded Chains at St. Catharines, under the supervision of experienced men from the Columbus plant.

Huntington, W. Va., Feb. 11, '16.
The Graton & Knight Mfg. Co.,
Philadelphia, Pa.:

Gentlemen: You will undoubtedly be interested to learn of the service we have derived from the 24-in. 3-ply Heart Belt we installed Jan. 7, 1913. This belt drives our entire factory, it has not been taken up since it was placed in operation, and is still giving perfect satisfaction.

Since installing this 24-in. Heart Belt we have found it to our advantage to standardize on your Heart Belting throughout our plant. This will indicate more forcibly than words the satisfactory service we have derived from the use of your belting.

Yours very truly,
NICHOLSON-KENDLE
FURNITURE COMPANY.
CWK/EC C. W. Kendle.

"There's no use arguin' agin' a success."—Josh Billings.

This bit of homely philosophy explains why the Nicholson-Kendle Furniture Company and others standardize on Heart Belting.

In all industries wherever STRICTLY FIRST QUALITY HEAVY belting is required, Heart Brand is the selection, because it is made from the choicest oak tanned leather, tanned in our own tannery, slowly, uniformly, and expressly for belting purposes—because it is made carefully, intelligently and honestly—because it is graded to a certain specified standard of quality—because it is "a success."

Have You Tried SPIRO Couplings?

Many large manufacturers have used "Spiro" couplings for years and have found them what we say they are—

Couplings that have a gripping force that's 50 per cent. greater than any other compression coupling, that will never slip even when subject to the most unusual strains, that have no keys to work loose or make quick removal difficult, that grip the entire length and circumference of the sleeve, that provide safety for your workmen at all times and prevent any danger of shutdowns.

Let us send our catalog on Power transmitting machinery for you to select some hangers and try them.

Every Working Minute Recorded

International
Time
Recorders

“Lost—An Hour”

Fancy any business man placing the above notice in a daily newspaper—seems absurd, doesn't it? A big reward wouldn't help any because time lost is gone for keeps.

Now, if your employees lose time the loss is yours, and you, as a business man to whom time means money, must bear the burden.

The International Time Recorder is an up-to-date piece of mechanism which records every working minute that you pay for. It is indispensable to the perfect adjustment of the pay roll. It is the business of our Time Recorders to stop the pay roll leaks in your business. In hundreds and hundreds of cases this has been accomplished through their use.

We make every kind of time recording device right here in Canada. We save you duty and forwarding expense. Write us this very day for information and prices.

Original "Dunbar" Machines

We are the original and the only makers of "Dunbar" Shingle Machines, Lath Machines, Clapboard Machines, Steam and Gasoline Logging Engines. Each is the best for its particular work. Are you using the best?

Lath Machine

From our many years of experience we evolved this "Dunbar" Original Lath Machine. Every improvement that could be suggested, every time-tested idea for the betterment of product and for greater speed, has been incorporated in this machine. We believe it has no equal, and there are a great number of mill men throughout Canada who share this belief with us. Carefully constructed of high grade materials and designed to work steadily under the hardest conditions.

Steam and Gasoline Logging Engines

Conditions in Canada necessitate an engine that will stand any amount of strain and hard work in the lumber industry. With this idea in mind we have brought out the "Dunbar" engines perhaps a little stronger than is really needed. They do their work easily and willingly, and stand a great amount of hard usage. Built entirely in Canada for the Canadian lumber trade.

Clapboard Machine

You will need no excuse for the quality of your product if you use the original "Dunbar" Clapboard Machine. Expert in every detail. This machine will give you the very best service under most trying conditions. It will turn out work without delays. It will need practically no repairs and will increase your output. We cannot recommend it too highly because it is giving this very service to lumbermen in all parts of this country.

Send for catalogues of any or all of these machines.

*The Babbitt Metal that's at the Front in Efficiency
and Economy*

HARRIS HEAVY PRESSURE

Being heavy Munition Makers, we appreciate information as to where the best Tools, Steel, Belting, Lathes, Furnaces, etc., can be obtained, the object being to get the best results in our work and we are pleased when manufacturers put us right. For the same reason we respectfully bring before you, Harris Heavy Pressure Babbitt Metal, knowing it to be the best that money or brains can make for all-round Machinery or Shafting Bearings. We emphasize this as we know you appreciate the word of a reliable firm. Years of service to the public of Canada prompts us to give the results of our knowledge of this Metal's qualities; it being both durable and moderate in price.

We Manufacture All Grades of Babbitt Metals.

ASTONISHING REVELATIONS!

THE Honorary Advisory Council of Scientific and Industrial Research appointed by the Dominion Government to ascertain what steps can be taken to prevent the existing waste, and to promote the conservation of natural resources, has brought to light some startling facts during its sitting in British Columbia. The enquiry dealt especially with lumber production and by-products. The president of a big lumber company said that "in handling trees for ordinary timber purposes, fully half the bulk was left behind, and 20 per cent. was lost by sawing boards alone." There is no reason why this "waste" should not be fully utilized and turned into a money-making account.

UTILIZATION OF WASTE WOOD

We have a wide experience in the design and construction of complete plants for the economical using of waste woods.

NATIONAL ^{Railway Motor} CARS

For Passenger Service

We recommend this car highly for lumber companies operating a short line railway, as it is an ideal car for light passenger service, or tractor for hauling supplies, moving crews, etc. Frame is of 3 x 1½ x ½ channel steel; axles 1½ inches with Hyatt roller bearings; 20 inch pressed steel wheels of extra strength. Four cylinder, four cycle, water cooled, 10-12 h. p. engine, equipped with Atwater-Kent ignition system, float feed carburetor with throttle and spark control, and kerosene attachment. We also equip the car with friction drive as it gives a variation of speed and power. Reverses by shifting friction wheel over center on the disc, and runs in either direction equally as well. Seats are nicely upholstered, with lazy backs; folding top with jiffy side and end curtains. The car is a complete job that will cut operating expenses in quarter.

"ASBESTOL"

Gloves and Mittens

Whenever you find the need for strong, serviceable work gloves and mittens you find "ASBESTOL" on the job.

In lumber camps everywhere they are extremely popular because of the splendid service they render the wearer.

"ASBESTOL" GLOVES and MITTENS protect the hands as they must be protected. The rough work of the lumber jack holds no perils for the hands that are clad in "ASBESTOL".

"ASBESTOL" will resist snow and water, heat or steam. They are always soft and pliable and comfortable at all times.

Wearing "ASBESTOL" Gloves and Mittens means absolute protection for the hands. It is insurance that every worker in the lumber camp needs.

Ask for "ASBESTOL" at your favorite store.

EISENDRATH GLOVE COMPANY

2001 Elston Ave., CHICAGO

LOGGING

LOCOMOTIVES

Locomotives on trunk line railroads have the advantage of the best facilities for inspection and repairs.

Logging locomotives face different conditions. They must work day after day in the hardest service, and often in localities where repairs cannot be made without great inconvenience. That is why we build our logging locomotives from interchangeable stock parts. With this

system every part must fit every other locomotive of the same size and design, and long delays waiting for duplicate parts are avoided. Interchangeable parts kept on hand at our Works for prompt shipment

MONTREAL LOCOMOTIVE WORKS, LIMITED,

DOMINION EXPRESS BUILDING, MONTREAL, CANADA.

Portable Saw Mill

The No. 5 Portable Saw Mill shown above is adapted to the use of individual or company wanting to work up a small pocket of timber or for use in an out-of-the-way location. It is compact and sturdy and will do splendid work under unfavorable conditions. There are scores of similar outfits in the country today giving satisfaction and making money.

We can ship AT ONCE

one outfit with Right hand Saw Frame and Carriage—set of track timbers same as illustrated above (opposite hand), also the following items:

No. 1 Log Jack with foot wheel and idlers

No. 7 Log Jack with foot wheel and idlers

10 inch by 36 ft. Steam Feed

10 inch by 42 ft. Steam Feed—Either feed can be furnished with vertical or horizontal valves. Double acting set works in No. 1, 2 and 3 sizes

We have one second hand plain slide valve engine, right hand, side crank, 9 x 13, suitable for a small saw mill plant.

Write at once for information regarding the above equipment or any other you may need

New
Model

BANDMILL

Built in 8, 9 and 10 ft. sizes, there's a Bandmill for every kind of work. The spring-cushioned, all knife-edged tension device is the most sensitive in use. Upper and lower guides swing about the exact centre of the saw blade.

The Upper Guide is raised and lowered by steam, an easy, accurate and swift adjustment, unequalled by any other. Wheel raising device and tilting device are roller-bearing. Operating mechanism is entirely enclosed in columns. Sawdust and slivers cannot reach it.

Massive design of the bed and columns precludes vibration during cutting. This mill is absolutely steady doing the heaviest work.

Every part of the mill is designed to make mill-wrighting easy. Adjustments and inspections can be made without difficulty.

Waterous Bandmills are designed and built in a plant that has specialized in the manufacture of Canadian Sawmill Machinery for more than 50 years.

Waterous

BRANTFORD, ONTARIO, CANADA

"FROST KING" METAL

Our thirty-five years experience in metal mixing enables us to place on the market a babbitt that we believe to be absolutely perfect. For high speed machinery and engine work it is without an equal. It is specially designed for saw-mills, planing mills, threshing engines, traction engines, pumps, rolling mills, pulp machinery, and all classes of stationary engines. It is a high grade metal made of the very best selected stock, and carefully compounded.

If your dealer does not stock FROST KING send us a money order for your requirements. Price 30c per lb., Fort William and East; West of Fort William 35c per lb., delivered nearest railway station; packed in 30 lb. and 60 lb. boxes.

For extra duty, such as over-hanging saws, our TROJAN BABBITT will stand where all other metals will fail. Price, Fort William and East, 65c per lb.; West of Fort William, 70c, delivered to your nearest railway station; packed in 30 lb. and 60 lb. boxes.

\$5,000,000.00
worth of mixed metal
sold annually.

Dear Sirs,—

We are pleased to be able to report to you that your No. 2 Automatic Steam Towing Machine, which has 1200 ft. of 1-inch dia. Steel Hawser, which you installed on our tug D.S. Pratt, is giving us first-class satisfaction. We have been using this machine two years and there is no doubt but that it is far ahead of the old manilla rope, both in cost and trouble of handling. We take pleasure in recommending same.

Yours truly,

Full of Good Points

In fact as well as in name.

The shape of the teeth of the "Famous Five" files was determined after many experiments.

Different shapes and depths are made, according to the work for which the file is intended.

Consequently you can get a "Famous Five" file that will cut fastest, and leave the best surface on any kind of material.

And a "Famous Five" file will stay hard and sharp for the longest possible time.

Their cutting qualities have been standardized. You can rely upon them.

Specify them when ordering.

They are:

What's INSPECTION to You?

*If by
Specifying*

RITE-GRADE *Inspected* RED CEDAR SHINGLES

you can make certain that the shingles for which you pay your good money are just what the rules say—up-to-grade, neatly packed, properly dried, it means much to you.

It is mighty easy to write on your order "Rite-Grade Inspected" and the trouble you may save by so doing a thousand times repays your care in making such a specification.

"Rite-Grade" means "Up-to-Grade," no matter whether the grade be Perfects, Clears, Extra Star A Stars, or Eureka's.

Ask us for a list of mills to guide you in making your shingle purchases.

Shingle Branch—

West Coast Lumbermen's Association
Henry Bldg. SEATTLE, WASH.

Ring Oiling
Device

Bond Hangers Are the Best

Anyone that has used them will tell you that. They cut the danger of hot bearings to a minimum because they are equipped with an up-to-date and efficient ring oiling device that keeps the bearings constantly oiled, without wasting oil. The reservoir once filled requires no attention for at least six months. Any misalignment in the shaft line is easily corrected by the universal adjustment.

Our catalog on Power Appliances is full of pointers. Send for it today.

What Efficiency Are You Obtaining from Your Boilers?

THE COPPUS TURBO BLOWER

Compact, simple and of high capacity, when installed under the grates of Dutch Ovens, will double the efficiency of any boiler where refuse is burned, even where the moisture content runs as high as 50%.

On receipt of plan of boiler-house and particulars of boiler sizes, steam pressure desired, present grate area and nature of fire used, we will be glad to submit a proposition.

What is the Temperature of your Boiler Feed Water?

The Reliable

REILLY MULTICOIL FEED WATER HEATER

is the Most Compact and Efficient Feed Water Heater
on the market.

Easily accessible, non-scaling, readily repaired in case of need, it has a reputation acquired by fifty years' faithful service both at sea and on land.

*Bulletins sent on request and prices
on receipt of details of requirements.*

"HAMILTON" DRAG-SAWS

For cutting up that hardwood bush install one of our heavy, well-built Drag-Saws

These machines will do the work required without trouble or expense. The frames are of heavy timber fastened together with long bolts. The shear, pitman and standard are of the very best hardwood, and the saw is fastened to the shear by one key—making a very simple, quick and strong device.

We make these machines in two sizes, as follows:

Class "A," as shown in cut, is driven with direct belt and tightener, tight and loose pulley may be used; carries a single 6 ft. by 12 in. saw, No. 8 ga.; shipping weight 1700 lbs.

Class "B" is driven with direct belt with spur friction on crankshaft. Carries a single 6 ft. x 12 in. saw, No. 8 ga., shipping weight 2200 lbs.

A 10 H.P. engine will easily drive either machine.

We are prepared to give prompt delivery on these machines and will be pleased to quote prices and delivery on request.

**Begin now to get ready for next winter's need for
hardwood throughout the country**

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, \$2.00 per year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

No. 5

The Need of Greater Efficiency in Woods Operations

Eliminate waste and conserve energy and resources are the slogans raised on every hand, and more particularly since the war began. Specialization and efficiency, which words once fell upon the ear with little passing interest, now arrest attention and secure an immediate hearing. One of the great contributing causes is the shortage of manpower, not to speak of the necessity of reducing overhead costs, increasing output, and economizing in both time and energy. The uplift is higher and broader than on a mere dollars and cents basis. Methods that were once eschewed as visionary and impracticable are now being welcomed and given a place in the scheme of things industrial. This is witnessed on all sides in such movements as the workmen's compensation acts, safety associations, co-operative movements, and multiplying organizations. At a recent meeting of the Woodlands Section of a sister organization a thoughtful paper was presented on the advisability, wisdom, and possibility of training and equipping outside help as thoroughly and efficiently as has been brought about in connection with the management and control of inside forces. The raw material end is quite as vital and important as the productive end, where bureaus of research and laboratories, with splendid equipment, are at work seeking to improve, strengthen, instruct, increase, and conserve. Economic conditions to-day render it necessary to turn out a product at the lowest possible cost, but with no deterioration in quality or minimizing of quantity.

At the recent Pacific Logging Congress it was suggested that extension courses in steam, electricity, and gasoline practice should be inaugurated through the medium of travelling instructors. Why, it has been pertinently asked, should not the lumber industry co-operate in this direction? In woods operation and management there have long been practices too costly and waste abnormal. This feature was strongly emphasized at the recent gathering of the Canadian Lumbermen's Association by Mr. George H. Holt, of Chicago, in his stirring paper on "Feeding the Lumberjack," which was published in

the last issue of the "Canada Lumberman." It opened up many avenues of thought along the line of uniform action and concerted achievement in the great win-the-war propaganda which is now claiming so large a share of the attention of the industrial and commercial world. The crude, the antiquated, and the reckless must be eliminated. This is not a mere platitude; its imperativeness is self-evident, not only on the ground of the survival of the fittest and in holding our own in the Dominion in the present strenuous struggle, but with the supreme object of concentration along greater production and using all the ideas of efficiency in manufacture that we can command. The spirit of "let well enough alone," or of following "the lines of least resistance," is passing. The lumber industry, like all others, is, at this juncture, face to face with new problems, and one of the most outstanding is increasing the efficiency in both the mills and the camps.

The lumberman needs trained men to-day more than ever. In every convention this is the keynote, and in logging operations, so long characterized by stereotyped, overlapping methods, this is particularly true. Hand labor and mere brute force are giving way to high-grade, time and labor-saving equipment. Gasoline and electricity are among the new means of service, and installations involving the employment of these modern agencies should be in the hands of competent men. Technical education has of late gained a remarkable impetus, and schools are being established in even small centres for the ordinary labor around the mills. The employees have been ready, even eager, to take advantage of the new facilities placed at their disposal, and this is abundantly emphasized in the pulp, paper, and other lines. At Thorold, Ont., Grand'Mere, Que., Espanola, Ont., and similar industrial towns where the production of paper is the chief industry, the technical classes are largely attended and enthusiastically supported by the donations of the manufacturers themselves and by the industry and diligence of the employees in this forward and aggressive movement. The same auspicious state of affairs will, in all likelihood, prevail in connection with the lumber industry as soon as the door of opportunity is opened. Speaking of the trend of the times, one authority who has given the matter ample consideration declares it is almost criminal to place costly skidders, locomotives, and donkey-engines in the hands of men who have but little technical training and then expect commensurate results.

The minds of men are being led by technical education to a more adequate appreciation of their positions and their worth as producing factors. Hard, cold facts are driving home the conviction that labor waste must be obviated, while efficiency and economy of endeavor must be developed to the highest point. The most costly adjunct in any large undertaking to-day is not the constantly mounting expense of doing business or increased manufacturing outlay so much as it is the inefficient man. It is not only his indirect loss, but what he might accomplish through skilled methods and well-directed efforts.

Has not the time arrived in Canada for the proper, thorough training of loggers? A start in this direction has already been made across the border, where on the Pacific Coast stationary engineers are having placed at their command courses in steam, electricity, and hydraulics. They are making fine progress, and idle hours are being converted into useful and helpful moments. Could not the same effort be put forth in connection with woods operation in Canada, and would not the operators afford encouragement to the proposition?

Converting Visions Into Practical Problems

The man of vision is the man of the hour. Without imagination, or its more or less logical accompaniment, the gift of prophecy, little would be recorded to mark the progress of the world. The most attractive and spectacular branch of military service today is the flying corps. In it there is nothing of the dull, drab or dreary. What other departments may lack in interest, daring and initiative, these are liberally supplied in the aviation arena, toward which recruits are pressing en masse. With the majority of young men offering themselves for overseas duty there has been an almost monotonous insistence for identification with the aerial army, and it has been declared that

aviation will be the great determining factor in the final winning of the combat.

And now the aerial corps looms large in an industrial sense. At the recent meeting of the various forest protective associations in Montreal, the value of such a service as applied to the prevention of forest fires and the patrol of timber limits was seriously discussed. This is another evidence of the march of progress and practical ideals which are being reached in mechanical equipment and the effective safeguarding of the wooded wealth of the Dominion. The proposition to employ airplanes equipped with gas bombs for the smothering of forest fires, and the institution of wireless stations over a wide range of territory would a few years ago have been received with every mark of incredulence and even derision. This is the period when radical reforms in every arena of activity are taking place and every available force harnessed for uses never dreamed of a decade ago. Even those agencies which, heretofore, have ministered only to the comfort and pleasure of man are being employed aggressively for the conservation of energy and the increase of efficiency. It is only a step from the sublime to the ridiculous, and the transition from the visionary to the feasible is a short route and quickly covered when inventive genius works unceasingly in the interest of commercial and industrial expansion.

The proposition for wireless stations as applied to the protection of the timber assets of Canada has progressed beyond the stage of mere theory and speculation. A committee has been appointed by the members of the St. Maurice Forest Protective Association, the oldest organization of its kind in Canada—and, by the way, that is only five years—to secure data in regard to the practical use of airplanes and the cost of machines for patrol work. When it is considered that not so long ago there were no trained foresters in Canada and that, within the last decade such auxiliaries as lookout towers, telephone lines, motor speeders and other regulations of a preventive character have come to the front, it is not surprising if before another decade passes, timber limits in Canada's nine provinces will be equipped with wireless stations and patrolled by foresters' aerial brigades. Sane, practical advice has already been handed out along this line. An authority from Boston states that even now observation stations should be equipped with radio apparatus, each tower being manned by three or four men, one of whom would be responsible for looking out for fires. Aid could then be summoned from other stations and the wireless used in connection with airplanes. Not only is the suggestion for wireless stations and airplane supervision eminently practical in the minds of those who have given advanced thought to forest protection, but the cost is not insurmountable. It is recommended that half kilowatt sets be installed in each station and these used for commercial purposes as well as fire protection. The cost of each set with observation tower and generating unit is estimated at \$3,000, and the upkeep would not be more than \$3 a month. Wireless telegraphy is easily learned, and the use of this modern means of communication has accomplished marvels on both land and sea, so far as the saving of life and property is concerned. Who knows but that within a comparatively short period its adaptation may be general to all the timber limits of Canada. It is an adjunct to the protection service, along with aerial patrol, that may come more speedily, be maintained more economically and with more beneficial results than we, at present, can conceive.

National Obligation of the Lumberman in the Present Crisis

Readiness for any emergency that may arise and preparation for future from the experiences of the past contribute materially to the solution of many difficulties either in corporate or national affairs. Success in any undertaking lies in knowing and doing the proper thing at the proper time. Most individuals can think of and do the right thing when it is too late, while mortals are in the main endowed with an abundance of hindsight and a modicum of foresight. It is the possession of the latter quality which tallies effectively in any industrial or world-wide struggle. The proper time to consider conditions that may or will arise after the war is long before the combat ends, and not

just as it is about to terminate. New conditions will develop which will cause the readjustment of economic and productive problems as well as manufacturing and marketing affairs and to study carefully the best course to pursue is of primal importance.

With practical and far-sighted wisdom, the Canadian Lumbermen's Association, at their recent convention in Montreal, which was representative of the trade from one end of the Dominion to the other, decided to establish a War Service Board. This influential body will act in conjunction with the government in proffering helpful and timely assistance and dealing with all matters of moment in a co-operative spirit. Members of the lumber industry are desirous of placing their service and products at the disposition of the nation in as large a measure and in as useful channels as possible. There are many weighty subjects to be considered, such as the export of timber to Great Britain, ocean tonnage, carriage rates, transportation, the manipulation of man power and supplying war needs of a pressing character. Co-operation with the Federal and Imperial authorities in solving both present and after-the-war perplexities is broader and more significant than might be supposed. Since the outbreak of hostilities the value of the forests of Canada has been presented to us in a new and enlarged light. One phase that should not be lost sight of is that without the effective operations of the Canadian Forestry Corps in Great Britain and Europe in which many of the bravest and brainiest sons of the industry are engaged, numerous advances, that have taken place in the enemy's territory, would not have been held. Lumbermen recognize the necessity of a sane, practical administration of Canada's greatest resource. The closer and more intimate the union established between the federal powers and the Lumbermen's Association, by means of the newly created War Service Board, the more efficient will be the work and the more satisfactory the outcome, in the chief business in hand today, which consists in trouncing the Hun and seeing that an honorable and lasting peace is concluded.

The formation of a Joint International Committee was another distinct step, and one in the right direction. It evidences preparation and readiness to meet any condition or difficulty that may develop, and has for its object the conservation of effort, national resources, unity of interest and economic control; matters to which the deepest thought and most scientific study have been given during the past few months. Two of the great questions of the hour are those of production and distribution. The greater the facilities afforded the wider will be the benefits derived. In a tolerant, co-operative spirit and a sincere desire to do everything in their power at the present time to strengthen national essentials and eliminate non-essentials, there is little doubt but that the Joint International Committee can work whole heartedly and unitedly in the promotion of many worthy aims. By an interchange of thought and opinion the members can clear away many obstacles that might otherwise obscure issues or deter progress and formulate a basis of understanding that will promote the greatest good and highest welfare.

Sound, practical patriotism will be kept to the forefront by every member doing all in his power to assist in prosecuting the present conflict to a successful termination for the freedom and democracy of the world. Then will come true the words expressed in an eloquent peroration by Hon. Frank A. Case, of Minneapolis, who, in referring to the relation of the lumberman to the nation, at the recent gathering of the western retail trade, declared:

"How are these and other imminent and serious problems to be met? I know of but one adequate answer, and that is by every member of an intelligent God-fearing citizenship taking an active, intelligent interest in public affairs, and considering it no less his duty to serve the nation in any needful capacity in times of peace than to enroll under its banner in times of armed conflict. If you have a proper realization of your duty you have likewise the intelligence, the strength and the ability to meet the issues. An immense domain within your borders is inviting development, and out of this war will come a nation whose God is the Lord and not Mammon; whose every citizen will recognize as his own his brother's need, and who, appropriating from the false philosophy of German kultur its essential elements of intellect and will, shall add the leaven of feeling, of soul, of spirit, producing a reconstructed world philosophy whose adoption and application will ensure the dawn of a new and better day."

The Hydroplane in Forest Protection

After Careful Consideration of All Phases of Difficulties Its Use is Endorsed by Leading Authorities—Another Utility of the Aerial Age

By C. H. Gibbons

Will the hydroplane in days of peace to come prove the greatest of all factors in conserving Canada's timber asset, as it admittedly will in revolutionizing fast postal and light package forwarding services, in photo-topographical surveying, and in facilitating exploration of the remaining wilderness areas of Mother Earth?

Will it and its brothers, the aeroplanes, with tremendous increases of engine power, become agencies of future passenger transport, competing with the slower moving steamships and express trains and racing the telegraphed message?

The twentieth century admittedly is to be the aerial era. The use and adaptation of airplanes to the common businesses of life are in their infancy. And when peace shall have come with victory this much is reasonably certain—that the war will have so far advanced the science of aerial navigation that its hazard average will be at least no higher than that involved in automobile travel.

As to the part the hydroplane is destined to play in the work of forest protection, senior officers of the Royal Flying Corps now stationed at Leaside Camp, and particularly those who have seen much cloudland service in France, answer emphatically "yes." They do so after careful investigation of all phases of difficulties naturally to be apprehended, and therefore provided against.

What One Aviator May Do

"One competent aviator with a modern twin-engined hydroplane will in future years replace a hundred forest rangers or fire wardens," declares one experienced pilot, a Flight-Lieutenant with two years' Western Front experience, now acting in an instructional capacity at the big camp just outside Toronto. He has been specially investigating the adaptability of the airplane to the necessities of forest protection, with a view to making forestry his business after war's fever has passed.

"The first essential in the successful use of any modern air craft," this birdman continued, "is, of course, the starting or landing course. One cannot look for aviation fields among the tall timbers. So the hydroplane seems to be just the right idea for such work. Almost all the extensive stands of commercial timber are associated with more or less extensive water areas, on the shores of which the observers' base camps could be established. In Ontario's forest areas there are innumerable small lakes ideally adaptable. It is much the same in Quebec. Out in British Columbia, I am told, the coastal timber tracts either extend along and back from deep bays or fiords, or, if inland, are found to contain large or small lakes, as like to those of Ontario as might be expected in view of the dissimilarities in the physical characteristics of the two provinces.

"Visibility is much strengthened from above, aside from the observer's vantage point. A puff of smoke anywhere within a ground radius of three or four miles is plainly discernible at an elevation of 4,000 or 5,000 feet. And one aerial fire ranger would have no difficulty whatever in patrolling daily—or twice a day for that matter—a district of 120 miles square, which means an area of 14,400 square miles, or 9,216,000 acres.

"How many ground watchers on the look-out would it take to cover that one-airman territory? How many men would the use of hydroplane observers release for other employment in the reconstruction period, with its pressing demands for enhanced production? How much in dollars and cents would be saved the country in the forest protection service bill alone, to say nothing of timber saved? There's something for provincial treasurer and finance ministers to figure out. The operation cost of the hydroplane watchman's work would be comparatively nominal, being limited to the wages of the pilot and possibly one man, their living costs and the upkeep and operation charges for gasoline, oil, etc.

Taking the Supplies in Pontoons

"But how would you get gasoline supplies in to a hydroplane watchman's base camp out in the wilderness? Simplest thing in the world—take it in with the plane itself. What's wrong with using the pontoons for carriers of fuel and other stores?

"Immediate location of a forest fire is the first essential of a successful protective service. If caught at its origination the forest fire does not get a chance to spread and do damage. It is when the fire gets a start before its discovery that the timber is eaten up in thousands and dollar mouthfuls. To locate every fire at its inception, as is possible and only possible by the use of 'planes, is to reduce the timber fire-loss to the final minimum.

"The Royal Flying Corps and the Royal Naval Air Service pilots will be available for this new field of conservation activity in any number after the war is over. And they will have been ideally trained to the work, with a sixth sense for locating any little puff or breath of ground smoke. They will have been trained, too, in accurate mapping and in wireless and signal communication. When the air-ranger spots a fire he does not have to waste valuable hours in getting to a district station or even to a field telephone. He wirelessly his warning on the instant. Half the time is saved right there. It may be possible that there are settlers in the immediate locality of the discovered fire who can without special difficulty extinguish it before it gets a start or before the district wardens could get to the scene of danger. The airman can hover over the discovered fire and show a red Verrey's Light or he can circle low and drop a message to the settler if need be.

The Forest Ranger of the Future

"Judged from every viewpoint—practicality, convenience, assured results, economy, forest saving—it strikes me forcibly that the hydroplane flying man must be the forest ranger of the future. Governments, if wise, will lose no time in enlisting his services."

"The proposition looks sound and with much to commend it to me," said Chief Forester Zavitz of Ontario. "In this province now we have divided our forest areas into 34 districts, fairly well covered by trails, and have adopted the watch-towers and field telephone system, which gives fairly good results. Of course, the aerial observation plan would call for less operation machinery, cut down the manpower requirement in keeping watch for fires, and ensure quicker reports. Wisconsin was making some interesting experiments in the adaptation of 'planes to forest guardianship when the war came along and the greater necessity absorbed the lesser. To prove of full service in the forest protection scheme it seems to me, however, that the airplane must be developed to the point where it can be depended upon to carry men and fire-fighting paraphernalia to the scene of trouble.

"Mr. Campbell, the Canadian Chief Forester, says that 400,000,000 acres is a conservative estimate of the commercial standing timber asset of Canada. Here in Ontario we have approximately, very approximately necessarily, 100,000,000 acres, in red and white pine, jackpine useful for tie-timber, pulping spruce, etc. We have, as I have said, 34 forestry districts, one of them containing roughly a couple of million acres. At a maximum our protective force is about one thousand men. Last season we had 1,110 fires in total, of which 56 per cent. were confined to areas of five acres and under. Fifteen million feet is our estimate of the timber loss."

First Standard Type Vessel Launched

The wooden steamer War Nootka, one of 46 similar standard type vessels contracted for in Canada by the Imperial Munitions Board, has been launched by the Western Canada Shipyards, False Creek, Vancouver. The design is from the shipbuilding department of the Munitions Board offices at Ottawa, and it is attracting the attention of shipping men, as it is believed that this type of vessel will mean much to the shipbuilding industry of British Columbia after the war. Vancouver shipping men have declared that there will be a big market for many years for wooden vessels of the type now being constructed by the coast shipyards. British Columbia is in an excellent position for their production, as Douglas fir is the wood specified and the timber for which this province is noted. The dimensions of the vessels are as follows: Length between perpendiculars, 250 feet; length over all, 259 feet; breadth, extreme, 43½ feet; breadth, moulded, 42½ feet; depth, moulded, 25 feet; depth, over keel, 27 feet; draft for displacement, 22 feet; draft over keel, 21 feet; deadweight on 20 ft. maximum, to Lloyd's summer freeboard, approximately 2,500 tons; deadweight on 20 ft. draft, approximately 2,800 tons.

Only the completed hulls are furnished by the contractors, all other iron work and fittings being supplied by the Munitions Board.

About 200 board feet of wood is used in the actual construction of the average airplane. To obtain this material it is ordinarily necessary to work over about 1,500 feet of select lumber, which often represents all that can be used for airplanes of 15,000 board feet of standing timber.

Cottage System with Steam Heating Plant

Superintendent of Reading Camp Association Thinks Days of the Bunk House are Numbered—Objectionable from Many Standpoints—Can Housing Problem be Much Improved?

Toronto, Ont., Feb. 19th, 1918

Editor, Canada Lumberman:

I was much interested to read in the "Canada Lumberman" of January 15th an article by J. W. Gleason, on "Logging Conditions in Need of Reform." It speaks well for lumbermen that, from among their own ranks, one is pleading the cause of the lumberjack.

I have for a long time been in camps of all kinds; lumbering, mining, fishing and railway construction, and the lumbermen and other operators on the frontier have always used me "white." In view of this favorable relationship may I be permitted to add a word? I am convinced that the unrest in camps is not due to lack of uniformity in wages, as Mr. Gleason suggests. Is it not possible that the housing problem is the sorer point?

The bunk house, I contend, is a curse to the employer, to the employees and the public generally. Many boys with comparatively clean minds and from good homes are asked to bunk with filthy-minded men. This sets up in civilization an eating cancer and is, moreover, a bad investment for the employer.

What do you think of the following proposition? Is it not feasible to put up a series of cottages in a quadrangle, heated with steam from a central plant? This would furnish not only heat, but also hot and cold water, in which case shower baths and dry houses could be arranged with very little expense. The same plant would furnish power for laundry, washing and ironing, and also a bread-mixer for baking, saw for cutting wood, and a dynamo to supply light to the camp.

I am convinced that our Canadian camps can be built and heated more economically from a central plant than by the manner now employed, even in the case of temporary camps of one year's duration. Most lumber camps that accommodate one hundred men, need approximately twelve stoves. The time spent in providing wood for these and attending to them is very expensive and very unsatisfactory.

Not a few employers deserve credit for the manner in which they provide food for their camps. Why not go to as much pains and proportionate expense in providing suitable housing? Like Mr. Gleason, many other employers are also honestly anxious to solve the problem of unrest among their employees.

Is not this unrest due mainly to the lack of suitable accommodation at camp? If the employers were to spend the amount on housing of their men that they now spend on employment agencies and on railway fare for men, many of whom jump camp as soon as they see conditions. There would be more contentment among the men. Railway fare would then not have to be advanced.

During the past month I consulted a foreman whom I have known for years. He states that he could heat and light his camp as economically from a central plant as he is doing at present by means of stoves and coal oil lamps. The company for which he works has three camps of one hundred men each. \$12,000 has already this season been spent on railway fares.

So far as I can learn, this is no exception, and from long acquaintance I am convinced that the employer is public-spirited and most kindly disposed toward his men.

It is a source of regret that the difficulty in getting men compels employers to apply to employment bureaus. The lumberjack loses his individuality the moment that he accepts work from an employment agent, as these agents often misrepresent facts. The lumberjack is told that the camp is near the railway, that he does not need warm clothing, or he can buy what he requires at camp. Apprehensive that he may run away, his suitcase is taken when he leaves the train and held until the team is ready to go to camp, and consequently, if he has any warm clothing he has not time to put it on.

After all the lumberjack is human. He is a man in the making. Why not then treat him as a man, and house him as a man should be housed, and give him room to grow? In general, the principle of sleeping in the same room with another is bad. No commercial traveller, indeed, no lumberman, no contractor, or other self-respecting Canadian citizen, is willing to be tossed willy-nilly into a bed with a stranger, even if the bed is of down, and the stranger clean. It is clear that the employer is ready to do his part toward the uplift of the employee. To decide on the right course to be taken is not so easy. But courage is in the air these days, and no doubt some courageous employer will shortly step out and wage war on the bunkhouse, and other evils of the lumberjack's life.

Can you not picture a camp, where each single man has a small room to himself, and where he can take a shower bath after work?

By reason of single iron beds being used there is no longer any vermin to worry the man. He gets into his clean clothes after work, hangs up his wet clothes in the dryhouse, and goes out to enjoy that "first-class meal," for which the camp is noted. He eats heavily for, as Sandy says: "Ye ken, he's nae dining at his ain expense." After supper, he goes into the reading room and has some music on the gramophone. At seven o'clock the foreigners and other students assemble for night school, and the government teacher instructs them until eight-thirty. Then all the "bunch" sing songs, and the teacher reels off some views of "home" for these lonely men. One by one they drop away from the circle, and go to their beds, happy and contented.

Each married man has his own little apartment. There the wife and children help him to live the normal life. The evening hours pass all too quickly, for the children listen to the story of the days when Daddy was a young lumberjack—when he had to be away from mother all winter, when he had to sleep in a dirty bunk, and went to bed soon after supper because there was no place else to go.

Alfred Fitzpatrick,

Superintendent, the Reading Camp Association

Opinions of the Lumber Trade

The Ideas Are Not Practicable

The "Canada Lumberman" has secured the views of a number of representative firms on the suggestions and radical changes outlined by Mr. Fitzpatrick. On the several points raised, a leading firm in Northern Ontario say that they think it is impracticable to abolish the bunkhouse as at present operated. In regard to installing a series of cottages, heated with steam from a central plant, they believe that the cost of building all these cottages would be prohibitive, except at places where there would be sufficient timber so as to have three or four years' cut from the one camp. They add:

"With respect to discontinuing the practice of securing help through employment bureaus, we think it would be much better for lumbermen to send their own agent to employ what help they require. Employment bureaus are about the worst curse the lumbermen have to contend with. We think the employment agents are the cause of men jumping from one camp to another as much as they do. They induce men to jump in many cases, so as to get an additional fee.

"We think the system of paying the railway fares for the men is a bad one, but it is difficult to deal with, as lumbermen whose operations are distant from the points where men are hired have trouble in getting men to go to their camps without paying railway fares, unless they give them an increased rate of pay. Naturally, the men will go to the camp nearest home if they have to pay their own fare.

"We do not think it would be practicable to get married men with their families to move into cottages built in the woods, as in most of the cases the camps are too far distant from railway stations, and the roads into the camps in such bad condition that it would be very difficult to get women and children taken into the camps. We believe that the lumbermen at present are making the camps as comfortable as they can, and carrying out improvements from time to time so as to make conditions for their men as attractive as possible, in the endeavor to keep their employees contented and securing as good a class of labor as possible.

"There are isolated cases where lumbermen have large blocks of thick timber where they can operate from the same set of buildings for several years in succession. In cases of that kind it might, perhaps, pay to carry out Mr. Fitzpatrick's ideas, but we doubt very much if the ordinary lumberjack would appreciate some of the things he proposes."

* * *

Conditions Preclude the Proposition

Gilmour & Hughson, Ltd., of Hull, Que., state that "Mr. Fitzpatrick outlines conditions utterly foreign to our firm's experience. We may say that for ourselves his ideas are utterly impossible. If a lumber camp is close to a railroad, with several years' cut of timber close to the camp, we can conceive that the condition that Mr. Fitzpatrick would like to have brought about is quite possible. In our own case, we operate 75 to 100 miles away from a railroad, and, unhappily, do not have the timber standing so close as Mr. Fitzpatrick's timber would need to be. Our conditions entirely preclude the possibility of

cottages heated with steam, as he proposes. We agree with Mr. Fitzpatrick as to the practice of securing help through employment bureaus. Regarding railroad fares, we have never suffered from jumpers or discontented men in the manner that Mr. Fitzpatrick has experienced, so that we are unable to speak feelingly concerning the men remaining a longer or shorter time in our camps. Our experience for replacing men has never been anything like what he outlines, neither \$12,000 nor even \$1,000."

* * *

Nothing Can Stop the Discontent

The Hope Lumber Company, Thessalon, Ont., declare they do not believe anything could be done to stop the discontent of labor, no matter what was done for the men. The reason of the discontent is that men will lay off work and move around as soon as they get a certain amount of money ahead; when this sum is spent they then go to some employment agency to place them in a job, and it does not take long for them to make a stake. Regarding putting up cottages instead of bunkhouses, the company do not believe it would be a good thing, and regard it as impracticable. "The men would not keep these houses clean, and we keep our bunkhouses clean," declare the firm, who add: "We cannot see how we could have steam heat up in the camps. How many houses in cities or towns have steam heat or furnaces in them? Very few; so why try to agitate such things in camps?"

"You could put all the luxuries there are into a camp and your men would not be any more contented. We have very roomy and warm bunkhouses, which are kept scrubbed and clean, and the men also get the best of food and lots of it. It is an easy matter for someone to be in a fine club-room or Y.M.C.A. in the city and say this is the sort of place for the lumber camp. We believe there are some of these kinds of things that are out of the question for the lumbermen to do. We surely have hard enough times as it is without someone trying to start some such a proposition as suggested, and we are of the opinion that all lumbermen feel the same as we do in a matter of this kind."

* * *

Rude Awakening from Pleasant Dream

The Dennis Canadian Company, of Whitney, Ont., say: "We consider the idea of steam-heated cottages for temporary use in lumbering as absolutely out of the question. If you should submit a plan for such a layout to a building contractor and ask for prices on its erection where the material has to be taken in many miles, over almost impossible roads, and where it is frequently difficult to find suitable location for a set of camps, even as now constructed, we are satisfied that the result would be a rude awakening from a pleasant dream."

"Many bunkhouses are undoubtedly far from what they should be, owing chiefly to overcrowding, and we think that the placing of bunks with the end to the wall might well be done away with. Where plenty of room is provided and the camp kept clean, we have never heard a complaint nor poor sleeping quarters assigned as a reason for any man leaving camp. The average commercial traveller would, no doubt, object to bunking in this manner, but he would also object to wearing the 'lumberjack's' clothes or doing the same individual's day's work. A majority of the men who now control the lumber business as employers have graduated up through the lumber camp, and it is safe to say that most of the pleasant recollections they have of the earlier days centre around the bunkhouse."

"Men who go to camp on their own responsibility are without any question more desirable than those who come through the employment agencies, but under present conditions of the labor market the employer who put up a nice camp and then waited for the men to come in might find that he had an ideal outfit but no logs. Neither is it quite fair to assume that all employment agents are unscrupulous and that they impose on the simple-minded, innocent lumberjack, who is usually a fellow quite capable of looking out for himself and never takes anything for granted."

"The chief trouble is that the average woodsman does not intend to make that his life's work, and he owes no loyalty nor allegiance to his employer. No matter how well he is used, he would just a little rather make a change and go somewhere else than to remain long with one employer, and the better he is paid the shorter time he stays in one place. With the exception of the few men (mostly married men) who go to a camp to stay the winter through, the average time-check is smaller when the wages are \$50 per month than when half that amount. There may be a solution to the problem, and, when it is found, the average lumberman will begin to think life again worth living, but the steam-heated cottage is not the answer."

Additional interviews with a number of other companies in various parts of the Dominion will appear in the next edition of the "Canada Lumberman."

Liverpool and Manchester Stocks

The following report upon Liverpool and Manchester stocks for the month ending January 31, 1918, is furnished by H. W. Lighthorne & Co., Liverpool, England:

Canadians Do Expert Work in France

Major J. I. Hartt, M.P.P. for East Simcoe, who has been serving with a Forestry Battalion in France, is home on two months' furlough. Major Hartt, who is a well-known lumberman, has been working in the Gironde district in the south of France, where lumbering operations are being carried on almost exclusively by Canadians, and the expert methods introduced by the Canadians have opened the eyes of the French people. "The timber in the Gironde was planted many years ago, Napoleon having started it in order to check the encroaches of the sand from the sea," said Major Hartt. "The pine there is now generally larger than is being cut in Canada. Most of the wood we are cutting goes into ties for railway construction, but we prepare it for building shelters, for plank roads and general trench purposes." Some idea of the amount of lumber being taken out may be gathered from the statement by Major Hartt that one mill, erected in just eight days, turned out between the middle of September and the middle of January about 5,000,000 feet of material.

Forestry Corps Needs Reinforcing

According to reports from Ottawa on the operations of the Canadian forestry corps in France, companies are still considerably under strength owing to the difficulty in getting reinforcements. Production, however, greatly increased, in spite of the lack of sufficient men. The corps was engaged on the production of sawn lumber to be used in the construction of huts for the British, French, and American armies. The work of producing fuel wood for the men in the forward areas was also undertaken by the forestry corps, and their operations added not a little to the comfort of the troops. The wood is taken to the fighting units by motor lorries.

It has been said that steel and lumber determine the industrial progress or recession of world activities. Granted that this is true, there is much of encouragement and cheer in the stirring address delivered recently in Hamilton before the Ontario Hardware Dealers' Association, when F. H. Whitten, general manager of the Steel Company of Canada, stirred the gathering with the force of his utterances. There was nothing equivocal or apologetic in his remarks. They were pointed and frank in every detail. Mr. Whitten said that the manufacturers had been a tower of strength to the country during the war, and every individual should do his utmost for his country cheerfully, and, by so doing, obviate the necessity of government regulation. It was his deliberate opinion that, after the war, all industries would be stimulated and Canada would enjoy as great a prosperity, if not greater, than any other country in the world.

There are more renters of homes than owners of homes in the United States. The Federal census, taken in 1910, shows that at that time there were 20,255,555 homes in the United States; out of this total, 9,083,711 were owned, and 10,697,895 were rented. This shows that 45.8 per cent. of the homes in the United States are owned, and 54.2 per cent. are rented.

Wholesalers Discuss Live Topics

Will Oppose Action of Railways Who Want to Discontinue Stop-Over Privilege—Insurance on Retail Stocks

At the first regular monthly meeting of the Wholesale Lumber Dealers' Association, which was held at the National Club, Toronto, on Tuesday, February 26, there was a good attendance. The members spent an enjoyable time at luncheon and then proceeded to business. A. E. Clark, chairman, presided, and several matters relating to the constitution were first taken up and progress reported. The chairman stated that the list of standing committees had been drafted and was practically complete. The personnel will shortly be announced. The standing committees number eleven in all.

W. C. Laidlaw gave an informal talk on income and war profits taxes, and made some comparisons of the legislation which had been passed in Canada with that of the United States. The latter had gone further than Canada, and some criticism was offered by the speaker in regard to various phases of the act. An interesting discussion followed on the actual application of the legislation in the Dominion in connection with the lumber industry.

A. E. Eckardt reported that the stop-over privilege had been brought before the Board of Railway Commissioners in Toronto recently. Commissioner Goodeve, after hearing Mr. Eckardt's request for information relating to this matter, had suggested having a conference of the lumbermen with the railways. Since then the railway companies have stated that they contemplate a full revision of the stop-over privilege. The matter will be taken up at a conference, and it was reported that it was also the intention of the railway companies to ask the Board of Commissioners to discontinue the stop-over privilege during the war. Mr. Eckardt brought this to the attention of the lumbermen in order to afford them an opportunity of preparing their views on the subject when the conference takes place, and also before the board when it comes to their notice.

A general discussion took place on the matter of co-operation among wholesalers and what could be accomplished thereby. One matter brought up was the importance of enquiry regarding insurance carried by retailers on lumber stocks which were not paid for. Many are in the habit of neglecting their insurance, and when a fire takes place, the wholesaler suffers the loss. This question was left to the standing committee to take up along with other matters that may develop.

A. C. Manbert gave an interesting talk on the value and usefulness of the association, and praised the good work that had already been done.

Ontario Districts All Organized

Number of Important Amendments Desired to the Mechanics' Lien Act—The Cost of Doing Business Considered

A well-attended meeting was held on February 22, at the Board of Trade rooms, Toronto, when the organization of the Central Ontario District of the Ontario Retail Lumber Dealers' Association was completed. The association is comprised of five districts—Eastern, Western, Northern, Southern, and Central Ontario—all of which have met and elected their officers for the coming year. At the gathering of the Central Ontario District there was a good representation from Toronto and outside points. R. A. Rastall, of the Canada Lumber Company, Weston, was appointed chairman pro tem, while several matters of interest were taken up.

T. E. Rathbone, of George Rathbone, Ltd., Toronto, was elected chairman for the coming year; W. M. Tupling, of J. R. Eaton & Sons, Orillia, vice-chairman; and T. A. Paterson, of Mickle, Dymont & Son, Toronto, honorary secretary.

Allan Watt, of the Watt Milling and Feed Company, Toronto; John S. Bond, of Batts, Ltd., and Chairman T. E. Rathbone were appointed a committee to name a permanent committee for the district. Several subjects were discussed, among them being the cost of doing business and the Ontario Lien Act. The opinion was expressed that a number of important amendments should be made to the act in order to make the owner or proprietor of a house under construction liable for the price of the materials put into it. Under the present act, the owner has to hold back only 20 per cent. of the contract figure in order to protect wage-earners and those who supply materials. He is thus protected against suit, and it is desired that the owner of a building should be made entirely liable for any claims. A discussion also took place on certain clauses of the Workmen's Compensation Act, after which the meeting adjourned.

The organization of the Western District of the Ontario Retail Lumber Dealers' Association was held in Hamilton, at the Royal Connaught Hotel, on February 12. Business followed a luncheon, and there was a good attendance from various parts. A. S. Nicholson, of Burlington, was elected honorary secretary, and considerable preliminary business was attended to.

Import License Not Applicable to Lumber

In connection with the recent proclamation of President Wilson at Washington, that no imports to the value of over \$100 would be received into the United States without an import license, various opinions were expressed with regard to its application to lumber shipments. Many enquiries were received by Secretary Boulton of the Wholesale Lumber Dealers' Association, Toronto, regarding the interpretation of the regulation, and it was thought that the order did not refer to Canadian importations, but to importations from overseas countries, in order to stop the bringing in of certain luxuries. The Secretary of the War Trade Board at Washington was promptly communicated with, and corroborated the advices previously received. The reply was as follows: "For the present no import license is required on the importation of lumber to the United States from Canada." When official confirmation was received, the members of the trade were quickly communicated with and some misleading rumors and much uncertainty regarding the outcome and meaning of the proclamation at Washington set at rest.

Canada Metal Company's Men Convene

More widely attended and representative in character than ever was the sixth annual convention of the Canada Metal Company, Ltd., which was held in Toronto during the week of February 4th. The managers and salesmen of the company from as far as Montreal in the east and Vancouver in the west were present. The proceedings were characterized by thorough, practical addresses on interesting business topics, and visits were paid to various portions of the plant, where timely demonstrations were given in the production of various metals.

The year just closed has been the most successful in the history of the company's operations, and since their new factory was erected on Fraser Avenue, in 1911, it has been found necessary to increase its capacity several times in order to keep pace with the growing demand of the firm's output. The Canada Metal Company have also built factories, and are manufacturing most of their lines in Montreal and Winnipeg. W. G. Harris, Sr., is president of the company, and extended a warm welcome to the large gathering of representatives. He said that the progress made by the firm had been remarkable, and attributed the reason for this splendid development to service and dependability, which formed the foundation of the record and reputation of the organization. He thanked all for their co-operation and interest of the past year, and added that those present would have the opportunity of seeing many lines manufactured, so that they could gain an accurate knowledge of what they were selling and become thoroughly familiar with the conditions under which the various metals were produced.

Mr. W. G. Harris, Jr., vice-president of the company, presided over the various sittings, and referred appreciatively to the splendid showing of 1917. He emphasized the fact that no firm could stand still—it must either go ahead or fall behind—and to expand further, after the best year in their history, would necessitate greater effort and more concentration than ever. He pointed out that, when the war came to an end, every business would receive a jolt during the reorganization period which was bound to follow, and only those firms who took cognizance of after-war conditions and made ample preparation therefore could hope to reap the benefit when normal times arrived. This was why it was necessary to keep the organization of their manufacturing and selling forces up to the highest point of efficiency.

During the progress of the convention luncheon was served each day at the Sunnyside Pavilion, the mornings and afternoons being filled with programs of unusual interest. The salesmen were invited to give addresses, and among those who spoke ably and convincingly were: E. Parkin, on "Humanity and Business"; F. Harris, on "Contracts"; W. G. Garrett, on "What We Are Doing in Winnipeg"; and M. Matthews, on "Sales Assistance from the Office and Others." Among other subjects touched upon were "Co-operation," "Regular Production," "Business Prospects in the Maritime Provinces," etc.

The business nature of the proceedings was varied by an enjoyable smoking concert, held in the large showroom of the head office. Not only were the visiting delegates in attendance, but also the office staff and the foremen of the various departments.

Hearty votes of thanks were accorded Messrs. W. G. Harris, Sr., W. G. Harris, Jr., and H. C. Crow. In responding, Mr. Harris, Sr., suitably acknowledged the many kind references made of the members of the firm, and was much gratified to see the intense interest that had been displayed in all the proceedings. He hoped that each one would go away equipped with a greater knowledge of the goods manufactured by the Canada Metal Company and thoroughly imbued with the spirit that animated the firm. That spirit was to give unsurpassed service and maintain their well-known reputation for dependability.

Another interesting feature of the convention was the gift of

gold watches and chains to Messrs. D. L. Scott and E. Parkin, who had been successful in the Harris Heavy Pressure Competition. The presentations took place at the conclusion of a discussion on "Babbitt Metal," and were made by Fred Harris, manager of the Winnipeg branch.

Practical demonstrations in the production of the company's goods were given, and included an inspection of the lead rolls. After the melting of the lead into slabs and sheets of various thicknesses and widths, a visit was made to the fine rolls, where the process of rolling fine lead was witnessed. An address was given on "How Galena Lead Ore Is Mined, Smelted or, in Some Cases, Treated by

the Electrolytic Process to Give the Pure Lead."

Another session was taken up with "Babbitt Metals," Mr. Harris, Jr., furnishing much valuable information regarding the subject and illustrating the real meaning of specific gravity in these metals. An exhibition of tests and how to pour Babbitt Metals in order to give the best results proved most instructive. Another session was devoted to Ingot Metals, and the prospects for the coming year, as well as the effects of the war upon the metal industry in general were reviewed. The manufacture of solder of various grades also proved a revelation of practical interest to the selling force, who handle everything from bar solder to ribbon solder.

When Are Mills Relieved of Contracts?

The Cases Where There is No Clause Regarding Conditions Being Beyond Control—Best Way Is To Quote on F.O.B. Basis, Shipping Point

In these days of rapid and tremendous changes, it seems the only safe way is to quote on the basis of f.o.b. shipping point, says the executive report, presented recently at the annual meeting of the Canadian Lumbermen's Association. As a large number of our members do considerable business in the United States, it is as well they should know the legal aspects of sale and delivery. We reproduce the following:

A recent edition of the bulletin of the National Wholesale Lumber Dealers' Association contains several legal opinions of timely peculiar interest to the trade.

Question.—We have placed orders with mills on whom we depended for shipment in order to carry out contracts. Some orders were accepted by use and in turn by our mill, without any qualifications as to railroad delays, conditions beyond our control, etc. Subsequently we used a conditional clause on our order blanks, stating that orders were taken subject to railroad delays, embargoes, fire, other conditions beyond our control, etc. In all cases the lumber was sold delivered, and some mills have taken the position that because of embargoes at delivery points and inability to obtain cars they were relieved from carrying out their contracts with, and because of the manner in which this business has been accepted, both by ourselves and our mills, four questions have arisen on which we would like information:

1. Is a mill relieved from carrying out its contract because it is unable to obtain cars or to make delivery on account of embargoes where the contract contains no clause as to conditions being beyond control?

2. Are we as wholesalers relieved from carrying out a contract with a customer where we are unable to get lumber from mills who have refused to ship, as referred to in question 1?

3. Where the conditional clause is used and contracts taken subject to the conditions mentioned, does the fact that cars are hard to get or destinations embargoed relieve the mill?

4. Where the conditional clause is used in our acceptance to a customer, are we as wholesalers relieved from carrying out a contract because of these same conditions?

Answer to question 1.—Any condition making it impossible to perform a contract is not an excuse for failure to perform, and the party is liable in damages unless he has specifically provided against these conditions in the contract. This is best illustrated in the following New York cases:

A company agreed to ship iron for prompt shipment by sailing vessel. After loading the vessel it was subsequently tied up in a frozen river, and did not sail for two months later. The court held that this did not excuse the seller from carrying out his contract, and that the purchaser was not bound to accept the late delivery.

A company agreed to deliver steel caps on the first of April. In March the bill burned down and the caps were not delivered. The court held that this fire did not excuse the seller from delivering the caps, and held him responsible for damages.

A seller was prevented from delivering goods on time because of a freshet which made it impossible to transport the goods by canal, but the court held that this did not excuse him from a performance of the contract and that he was liable for damages.

Where a seller has agreed to deliver goods which he had "secured" from a manufacturer he is bound to deliver at the time fixed or pay damages, and the impossibility of obtaining goods from the manufacturer in time did not excuse the seller from making delivery.

These cases cover contracts where there is no clause as to conditions being beyond control, and the answer to the first question is that the mill is not excused from a performance of contract.

Answer to question 2.—From the preceding reply to question 1 it is seen that a wholesaler is not relieved from his contract by the conditions mentioned.

Must Show Reasonable Diligence

Answer to question 3.—What the court or jury would decide to be causes beyond control or sufficient to excuse a mill from making delivery will depend upon the facts in each case. It will require reasonable proof that the lumber ordered could not be shipped after the mill had shown every reasonable effort to get it out. In considering this question from the standpoint of a manufacturer of lumber it is reasonable to assume, under most conditions, that a court or jury would conclude that a manufacturer is required to ship only lumber which he himself manufactured and is not in the same position as a merchant who buys in the open market. The manufacturer must prove that the conditions were actually beyond his control, and the mere fact that it was difficult to obtain cars, or that the point of destination was frequently embargoed is not, in itself, a condition which would relieve a manufacturer from carrying out his contract. In the opinion of attorneys, difficult as such conditions are, they are not, under the meaning of the law, beyond control, and unless a manufacturer, or any seller of lumber who wishes to take advantage of such conditions, can show other reasons than those stated, it is doubtful whether the courts would grant him relief in cancellation of a contract. He certainly must show that he used reasonable diligence to make delivery, regardless of the embargo or car shortage, and as long as lumber can be obtained from other mills and shipped to the destination named in the order that fact itself would be strong evidence to prove that the conditions were not beyond control.

In one case referred to our legal department, on a contract calling for delivery New York City, the destination was continuously embargoed, and delivery could only be made by obtaining a permit. The correspondence indicated that the shipper had made many and continual efforts to obtain the necessary permit, not only by written requests but also on many occasions sent his representative to make personal application for a permit, and, in addition, solicited the aid of his customer in obtaining the permit. In this case our legal department believes the court will undoubtedly hold that the mill has shown all reasonable diligence, and that, under the conditional clause, is excused from performance.

Answer to question 4.—As stated above, it is reasonable to assume that a court or jury would conclude that under most conditions a manufacturer is required to ship only lumber which he himself manufactured, whereas a wholesaler is in a different position, unless in his contract he has limited himself to deliver from some specifically named mill. Unless he has done this, a wholesaler is expected to buy the lumber anywhere in the open market. While it may be impossible for him to deliver from the mill from which he expected to make the delivery, that would not be an excuse sufficient to relieve him from his contract. Difficult as such conditions are, they may not be beyond the wholesaler's control, and as long as the lumber in question can be obtained, even to the extent of buying it in the local market or at the point of destination, the burden would be upon the wholesaler to carry out the contract.

If sales are made "f.o.b. mill freight allowed to destination," it is the opinion of our attorneys that sellers will avoid many difficulties brought about under conditions above mentioned.

Twenty-eight men, the majority of them alleged I. W. W.'s from the United States, held the foreman of one of the Russell Timber Company's camps and forced him to sign a letter to the head office of the company in Port Arthur stating that the cutting season for pulpwood at that camp was completed. The men were brought to Port Arthur from Duluth and were under contract with the timber company, and were to be refunded their fares when the cutting season was over. The plot was frustrated by the foreman making a trip over the ice under cover of darkness and informing the head office of the affair.

Adopted for Sawing Vertical Grain Stock

Western Man Designs Sawmill Carriage and Method of Sawing Spruce Logs for Airplane Stock—
Explanation of the Method Employed—Proper Selection of the Logs

Sawmill men are producing only about 25 per cent. of vertical grain airplane stock from the logs they are sawing, due to the fact that their equipment is not adapted for sawing vertical grain stock out of No. 1 clear logs, and for the further reason that their object is quantity and not quality, says O. C. Fenlason, of Portland, Ore., in the "Timberman."

I have designed a sawmill carriage and method of sawing the same logs in a way that will produce from one to four times as much vertical grain airplane stock as the sawmill men are now producing.

I have presented this proposition to the United States Signal Corps and have been requested by them to acquire all the information possible on this proposition.

I earnestly request that sawyers in particular study carefully my plan, because sawyers are really the men behind the gun in getting the airplane stock out of the logs. I sincerely hope that all mill men and those interested in the spruce production will examine the plans I submit herewith, and feel free to criticise it and offer suggestions that may be helpful.

The mill I have designed for cutting spruce logs for airplane stock is best described by consulting the drawings herewith. The method of sawing consists of making four or more radial cuts from the periphery of the log toward the heart, thus dividing the log into four or more sections or cants. These cants can be split from the heart or core of the log and then resawed for grain and dimension on a carriage that is properly equipped with independent adjustable head blocks.

Figure 1 illustrates the cross section or end view of an 84-inch log. The radial cuts which extend within 10 inches of the heart are designated by the letter "a." The cants into which the log is divided are marked "b." The line on which the cants are to be split from the heart or core is marked "c." After the first radial cuts are made the cants are divided into two cants by cutting along the line designated "f."

This method of sawing will save all the stock in the log next to

the sap, which is the best stock in the log. A large part of this clear material is being wasted by the method of side sawing now in universal use. A log cut by this method will yield all vertical grain stock of more than 45 degrees, except the heart or core, which can be sawed into box material.

The longitudinal side elevation of the sawmill carriage is shown in Fig. 2.

Description of Carriage

Figure 3 shows the end elevation in section. A 72-inch top saw, with an arbor running in boxes that are adjustable vertically is provided. On the saw arbor are two 12-inch collars fitted with knives to act as a rosser, marked "h" in the illustration.

Two 8-inch I-beams, marked "i," are mounted on a standard sawmill carriage. The carriage is without head blocks or knees, thus permitting the logs to be rolled in on one side of the carriage and out on the other side. Otherwise the carriage is standard, except as to the special mountings hereafter described.

A cast iron head block "j" is mounted permanently and securely on the I-beams on the head end of the carriage, as shown in Fig. 2.

A cast iron movable head block "k" is mounted on the I-beams on the tail end of the carriage and the mounting is such that the head block can move longitudinally on the I-beams, thus compensating for short and long lengths of logs, which makes it possible to chuck a log from 18 to 40 feet long. The movable head block is similar to the head block on a large veneer lathe, such as is used by the Portland Manufacturing Company at St. Johns, Ore., and will swing and chuck a log nine feet in diameter, 40 feet long, or shorter. There is no experiment about chucking logs in the center, as it has been done successfully for 75 years in veneer lathes where the log is subjected to intense torsional strain.

All other details of this mill are clearly marked and described on the drawing.

A 36-inch pulley with a large diameter and long projecting hub is provided. The ends of the hub "y" run in bearings, and the center

LEGEND

Fig. 1—Cross-section or end view of an 84-inch diameter log.

Fig. 2—Longitudinal side elevation of mill carriage.

Fig. 3—End elevation and section of carriage.

a. Longitudinal radial cuts in the periphery of the log to within 10 inches of the heart.

b. The sections or cants into which the log has been divided by the radial cuts "a".

c. The lines on which the cants "b" are split off from the heart or core "d".

d. The heart or core of log after "b" is split off.

e. The line on which a cant shall be cut from "b".

f. The line on which the remaining portion of cants shall be divided into two cants.

g. A 72-inch top saw with an arbor running in boxes that are adjustable vertically.

h. Two 12-inch collars on the saw arbor, fitted with knives to act as a rosser.

i. Two eight-inch I-beams mounted on a standard sawmill carriage.

j. A cast-iron head block mounted permanently and securely on beams of carriage.

k. A cast-iron movable tail block mounted for longitudinal movement to compensate for long or short logs and actuated by the screw end.

l. Six-inch diameter spindles running in bearings and "j" and "k".

m. Eighteen-inch chucks on the ends of "l" for chucking logs.

n. Four-inch diameter screw longitudinal with I-beams.

o. Collars screwed and set on screw "n" to take all end thrust in tension.

p. Bearings in the girders tying I-beams together to receive bearings of the screw "n".

q. Finished fitted ways on which the movable tail block slides.

r. Sixty-inch diameter worm gear keyed to end of spindle "l".

s. A worm in mesh with "r".

t. A crank to turn the worm "s", thus turning the spindle "l" which turns the log "x".

u. Collars screwed onto the spindle "l" to take end thrust when unchucking the log.

v. A 24-inch bronze nut through which the screw passes and actuates the tail block "k".

w. The squared overhanging end of the screw "n".

x. The log which is to be radially cut as it passes under top saw "g".

y. A 36-inch pulley with long projecting hubs running in bearings and the center of hub chambered to fit square and of screw "n" for purpose of revolving "n" to chuck or dog the log "x".

Fig. 2.

of the hub is chambered out square to fit the overhanging end "w" of the screw "n," hence when the carriage is run back to the log deck to load a log "w" will pass through the hub "y" and is then in position to dog or chuck the log by revolving the hub, thus moving the movable head block in the desired direction. The log would be lifted into position by overhead gear the same as is used in lifting logs on the log deck, instead of pulling the log up the log slip into the mill. It will readily be understood that logs hung or chucked on or about the center can be quickly and easily turned and that no damage will be done to the cant, as is often done by standard log turners and hooks.

It is an inexpensive mill to build and should be driven by independent electric motors. The log deck is so arranged that the logs are rolled in on one side of the carriage and off on the opposite side, and the skids that receive the logs when rolled off the carriage should be about eight feet from the ground, thus allowing the log to drop or fall, the shock of which would probably break most of the cants loose from the heart of the log.

If the foregoing premises are correct, I believe that it is the patriotic duty of all the lumbermen to get together and build a quarter sawing mill on the Columbia River, one on Puget Sound, one on Gray's Harbor, one on Willapa Harbor and one on Coos Bay, and select all the fine No. 1 clear logs and send them to their quarter sawing mill and then ship these cants to the resawing mill that the government is building at Vancouver.

Building Recutting Spruce Plant

The government is building at Vancouver, Wash., a recutting plant that will have in it 12 circular rigs and specially designed head blocks and edgers that will cut and rip lumber and cants in a way that will give the desired grain for airplane stock, and it is my opinion that this is the most practical plan yet devised, as in this government plant expert men will train the whole mill crew to look for quality and not quantity, and the average mill cannot do this, even if they had the proper equipment, without greatly reducing the cut of the mill and thus adding enormous expense of sawing, due to the fact that a large crew of men would be standing around waiting to grab a board or cant. Therefore, the government can do this work much cheaper and better. The mill men, therefore, should render the greatest assistance possible to the government by furnishing better cants that will saw out more airplane stock than they are now doing, and as stated above, quarter sawing will accomplish this good result.

I desire to say to the loggers that the proper place to inspect and select the logs is in the woods where you can see the conditions under which the tree grew; see if it is healthy or over-ripe, and see the chips that will indicate the grain. Hence, all good logs should be selected and marked in the woods, and above all, when you fall a fine, large, clear spruce tree it should be bucked up into logs 26 feet long, as this is the length required for wing beams, because if the log is bucked into logs 30 and 32 feet long a large percentage of the fine, clear stock in the log must necessarily go into shorts, and plenty of short lengths can be obtained from the poorer grades of good spruce logs.

Pole Road, the King of Logging Truck Roads

By A. R. Hilliard

The first question the experienced logging truck man or traffic engineer asks is "What kind of roads have you?" And where no good road exists he must see that one is built.

The king of all logging truck roads, barring only the hard surfaced or paved road, is the so-called "pole road."

In its best form this is built of poles, twelve or fourteen inches in diameter, hewn or broad axed or adzed on one side to form a flat surface for the truck wheels. These poles are laid in pairs, two poles on each side of the road, joints broken.

Small pole ties are used, at each end in the center, and the poles spiked down to them. This prevents the big poles working loose at the ends, tipping up under weights or spreading at the center.

Some such roads have been built without the cross ties, but where the road is to be used for a long time the small extra cost of putting in the ties is more than offset by greater permanency of construction.

The fore and aft poles should preferably be sunk into the ground at least half their diameter. This increases the strength and firmness of the road. Unless it is done, i.e., if the poles are laid on top, the ground may wash away in winter and the spring of the poles makes hard pulling and steering and causes pole breakage.

The rear wheels of the truck measure 15 inches across; trailer wheels the same. So two ten-inch poles are wide enough, but for easy driving, safety and strength it is best to use twelve or fourteen-inch. Lay the two poles close together and hew down so there is only a little space between the two flat surfaces of adjacent poles. If the "valley" is too deep, so that the tires slip into it, the wheels will lose traction and the tires wear too rapidly. In such cases fill the "valley" with

dirt and gravel. The main idea is to have the two poles as nearly as possible form a flat surface for the wheels.

Over fills, around bends on the edge of ravines and in places where running off the track will be dangerous it is advisable to put a third pole in on the outside of the other two—this to be used as a guard rail to keep the wheels on the track.

This third pole need not be hewn or surfaced. It should be high enough to prevent the front wheels over running it. It may be spiked to the outside top of the outside track pole, or spiked to the cross ties (in which case a good sized pole must be used to give sufficient height) or posts set into the ground and the guard rail secured to them.

It is hardly necessary to go to this extra expense for guard rails except where it would be dangerous for the truck to leave the timbers, but in such places they are distinctly worth while. Under ordinary conditions any driver can keep his truck on a twenty or twenty-four-inch track without trouble.

This road makes use of practically waste material which is close at hand. The cost of getting out the poles, hewing and laying will not be much greater than buying No. 2 planking, hauling and laying it.

The pole road is tough and strong. It does not splinter, crack, split or break easily. It lasts and requires but little maintenance.

The material and construction of such a road would cost from \$1,500 to \$1,900 a mile, exclusive of grading. Figuring grading at \$2,000 (there is no ballasting) you have a road that will cost \$3,500 to \$3,900 a mile, and worth it.

Several forms of road have been tried in Northwestern truck logging operations. A brief description of each will be sufficient, and inasmuch as the materials are at hand and their cost known, and grading costs vary greatly, no attempt will be made to give estimated costs of construction or maintenance.

Ties (culls) laid crossways make excellent roads. But their tendency to sink into the ground and make the road uneven or bumpy, breakage due to uneven ground and great expense practically eliminates ties as a factor in road building, except for very short stretches.

Plank laid crossways has the same faults as found with ties. And in either case there is a big waste of good material, for we need a track, not a pavement.

Puncheon is not suitable except to fill short places in an otherwise good road. And even then planking laid fore and aft over the puncheon will save the truck from excessive vibration and give better traction.

Slabs and short pieces should not be used even to fill holes. They do not last, and are a source of trouble and expense.

Plank, 4 x 12, laid in pairs, fore and aft, form one highly satisfactory type of road. To get the best results, a trench should be scooped out on each side of the road; three or four inches deep and twenty-five inches wide, and the plank laid in this and dirt or fine gravel thrown on the plank, sufficient to work in and pack or tamp the planks firmly in place.

This prevents the plank working out of place and helps to delay the inevitable breaking of the planks.

Such a road has been constructed on an existing dirt road, for \$1,500 a mile. With 4 x 12 \$22 at the mill this price would be quite a bit higher now.

Will Build Ships on Extensive Scale

Siffroi Robicheau, of Meteghan River, N.S., who a few months ago entered the employ of the R. H. Cowes Construction Company, of Boston and New York, the organization having established a shipyard at Meteghan River, was in Yarmouth, N.S., recently. The Howes Construction Company knew nothing, it is said, of Nova Scotia and its shipbuilding possibilities until last fall, when the vice-president, Mr. George D. Morecroft, came to the province and in a trip along the Bay Shore was not long in grasping the whole situation. The company since then has established itself, and its work of development has been great. A lease for a term of years has been taken of the late James Cosman shipyards, at the mouth of the Meteghan River. Mills, together with pattern shops, equipped with the latest improved shipbuilding machinery, have been erected and are now working.

They recently closed a deal for a tract of 500 acres of very valuable timber land on the Meteghan River. Lumbermen's camps have been erected, and a large gang of men is now engaged on the property, getting out ship framing and timber, some of which is being hauled direct from the stump to the mills, while a greater quantity is taken to the river, to come in the spring. The company intends to enter into shipbuilding on a very extensive scale. They have already laid the keel for one vessel, for which sufficient framing is on the site. They expect as soon as they are thoroughly established at Meteghan River to employ a large amount of labor and to vigorously pursue shipbuilding. As soon as spring breaks and their winter's cut is rafted into the mills, where it can be conveniently handled, they intend to lay three more keels side by side and have the work of construction go along simultaneously.

More Efficiency in Woods Management

Why Not the Same Thought, Technical Skill, and Judicious Capital Expenditure There
As In Actual Operation and Control of the Mill

By F. A. Sabbaton, Grand'Mere, Que.*

I saw a lot of woods managers who had been up against and solved a lot of difficult problems in years past, and had not allowed anyone to bluff them without the bluff being called. In other words, I knew you would all hear the switch click when we left the main and started off on that branch line, and so I decided the best thing to do was to be perfectly frank with you; to tell you that I do not pretend to know anything about your affairs that would be worth the time it would take you to listen to it; but rather to speak with you for a few minutes on a subject about which I should know something, whether I do or not, for I have for several years past been interested in very little else than the subject of business policy, management, and operation of pulp and paper mills.

Perhaps after I have drawn for you a rough sketch of the changes in methods and the results that I have seen brought about during the past twelve or fourteen years in the mills you will have something worth thinking about when you sit down quietly later on and ask yourselves if the policy and methods pursued in the woods operations and the management of the forests has been as far-reaching and as broad in its character as that applied to the mills; and, if not, is it not possible to apply some of these methods to the bettering of conditions in the logging end of the business? It is, of course, possible that my simile may not be a good one, and that simply because certain things have been accomplished by the pursuit of a particular policy in the management of a mill proposition equally good results would not be obtained by working out the same policies in logging operations, but, for my part, I am going to take the attitude of the man from Missouri, who said, "I won't believe it until you show me." So I am not going to butt in to your business and tell you how it ought to be run, but rather leave this to you gentlemen to work out, for I know you are much more competent to get after the details than I could ever hope to be.

The Evolution of Allied Industry

But now let us look over what the mills have done, and then you think it over for yourselves. As I am intimately acquainted with the conditions and policies of but one paper and pulp mill—the Laurentide Company—I must draw my facts from that source alone; but I think I may safely say that almost every other paper mill in Canada would give you a practically parallel line of information if you could induce them to do so.

Fourteen years ago the production of newsprint paper was, let it be admitted, accomplished in a rather crude fashion, and by means of what is generally known as the "rule of thumb." The machinery in the mills was, perhaps, in some cases as good as could be obtained at that date for the particular work for which it was designed, but too often the first cost of the machine was given primary consideration rather than its efficiency, or what it would cost to produce the product from it. Since that date the best engineering talent and trained technical and mechanical skill have been concentrated on the design and improvement of these machines, with the result that now nearly every machine in all the departments of that mill of fourteen years ago is in the scrap heap, and in their places stand new machines having greater output capacity per day, capable of being run at a much lower cost for repairs and, best of all, turning out a product vastly superior in quality. I can give you numerous instances to illustrate this point: In the ground-wood mill, magazine grinders, direct connected to electric motors of 2,000 h.p. capacity, now produce 20 tons or more of the most uniform and excellent quality of ground-wood pulp per day, whereas in the older mill six tons of questionable and variable quality of stock in twenty-four hours was the accepted rule. In the sulphite department the change in the design of the primary apparatus has not been so radical, but the details of the process have been just as carefully studied, and we now have recording instruments to tell us the pressure and temperature being held in the interior of the digesters at every moment of the day. This one improvement has brought about the making of chemical pulp from a matter which was more or less guesswork almost to an exact science. Many other improvements have been made in the auxiliary equipment of this department, such as centrifugal screens, high efficiency pumps, and in a hundred other details. In the paper mill the big machines now produce newsprint paper at a speed of approximately 650 feet per minute, whereas 450 feet used to be considered a good speed, or an increase of over 40 per cent has been brought about in the rate of production; and still, in spite of this increased capacity, the efficiency with which the machines operate to-day is very considerably higher than it was previously, and

the quality of the paper produced is so far superior that it would be difficult to realize on comparing the two sheets that both were intended to represent what was known, in their respective times, as standard newsprint.

Made Practical in Face of Opposition

I don't want you to get away with the idea that these radical changes were in some miraculous way handed out to the paper mills. On the contrary, they were the results of years of hard work, of rank theory tried out and made practicable in the face of opposition that said it couldn't be done; of several big failures, before a little success and a small advance was made. There are, I will admit, some few mills still in the country that have not pursued this policy, and are still operating the old machines, and obtaining the old results, but if you will examine them closely I believe you will find that they are not making adequate returns in the way of profits to those who have invested their money in them. So much for the machines.

Now, let us look for a moment at the human element. When a paper mill was built in Canada fourteen years ago, the available supply of trained labor for the operation of that highly-complicated plant was practically nil. I believe almost the same conditions hold true to-day where the mills are built, as they generally are required to be built, at long distances from large centres of population. Boys and men who, in our particular case, spoke very little or no English, had to be brought in from the farms or from the lumber camps, shown the machinery, and told to operate it. You can imagine without any description from me as to what the conditions were like. Cursing, brute force, and trusting to luck seemed to be the regular method of procedure, and I might add that the proportion of the bad luck to the good luck was about as ten is to one. To be sure, there were a certain number of so-called skilled men who were absolutely required to operate the paper machines and certain other parts of the plant, and these men were generally drawn from the discontents or inefficient of the other plants more favorably situated, and, usually, after remaining for a few months and tiring of the general advantages or disadvantages that our town had to offer, would, so to speak, pass on to the next cage.

Here was a condition much harder to overcome than the question of inefficient machinery. If a machine does not work you can scrap it and go into the market for one that does, but with men it is a case of gradual improvement. They must be educated—there is no other way. Now, it is comparatively easy to educate a man to operate a particular machine to which he is attached, but the process must go deeper than this—he must be educated to realize the importance of keeping the plant clean, of keeping his own health good, and, in short, of being a good citizen in the community in which he lives and works. I will not pretend to you that we have accomplished wonderful results along these lines, but I will say that the manager of our company has seen that these phases of the situation are just as vital as mill efficiency, and are, in fact, a part and parcel of mill efficiency; and we have, at least, made the first steps along the road by building a town with model residences, operating a hotel that is considered to be a credit to the community, providing club houses for the employees, and maintaining a free school that is now doing its little best to educate 130 children. I will further simply mention the skating rink, tennis courts, playgrounds, and golf links as means of healthful exercise and recreation, with cow barns producing 300 quarts of milk per day, and a large farm and truck garden to partially stabilize the food conditions.

What Training and Education Accomplish

As to the results that have been obtained in an endeavor to produce a class of highly specialized labor from the local supply of farm hands I would call your attention to the fact that out of a total of 21 paper machine tenders, who are generally considered to be the highest class of skilled labor attached to a paper mill proposition, 18 are local French-Canadians who have been educated in our own mill. These men, the majority of which, were it not for the training that they have received at the hands of the Laurentide Company, would now be either farm hands or lumbermen, are at this time receiving the modest pay of from \$1,400 to \$1,600 per year each, and I might mention in passing that their regular labor consists of an eight-hour day.

The human problem in mill management is certainly more difficult and more discouraging in its solution than the mechanical, but fortunately it is a live problem, and, like every other living organism, when it is properly nourished, it grows and develops of its own free will; and so I think we can feel perfectly confident that as each new

generation comes along it will be a little more efficient and better in every way than the one that has gone by, provided it is given proper physical, mental, and moral food for its nourishment. I will admit that these ideas are not generally considered to be a part of ordinary mill management, and perhaps some of you may question whether the large expenditures made along these lines by the Laurentide Company have proved to be justifiable. Without wishing to enter into a long discussion on this subject, I think I may with confidence point to the general business standing and financial position of the Laurentide Company, and leave it for you gentlemen to decide whether or not these methods have proved to be good business policy.

Now let us come back to the wood lands. Are any of the methods that I have so briefly outlined applicable to the cutting of logs, the floating of them to the mills, the taking care of the standing timber, and all of the thousand other problems with which you men are concerned? Are the conditions surrounding the work in the woods so absolutely different that the progressive methods that have been proven to be so successful in mills are not applicable there? Frankly, I am so poorly posted on this subject that I am not in a position to judge the question, and so I must leave it for you to answer; but I am wondering if as much trained thought, as much technical skill, as much judicious expenditure of capital has been brought to bear on this difficult problem of logging operation and management as has been pumped into the equally difficult problem of the proper running of the mills. I do not see that the two problems differ materially in their basic principles—the proper studying out and trial of mechanical equipment and the careful training of special labor. The men who cut the logs in the woods and drive them down the rivers are not in any way a different class of human beings from the ones who grind the pulp and manufacture the paper, and if good housing and food conditions is in one case conducive to increased efficiency it should also increase the efficiency in the other case.

Why Not Results in Both Cases?

In order to properly operate a paper mill along the lines we have proven to give the best results a large and complicated organization of specially trained officials, foremen, sub-foremen, clerks, etc., is necessary. Is such an organization generally considered necessary in order to conduct large logging operations? I think not. If such an organization produces results in the one case why not in the other? These are questions that, as I have before said, I am not going to try to solve, or even to argue about, but I am leaving them with you to think over. I will simply say that I consider this question to be one of vital importance to the pulp and paper industry, and probably also in an equal degree to the manufacturer of lumber. I am afraid that we men connected with the pulp and paper industry are much too apt to consider our timber as the raw material from which paper is produced rather than as an item made up almost entirely of labor. We use our very best endeavors by adopting labor-saving machinery, and by the most careful management and oversight to keep the labor costs of our mills at their lowest possible point, whereas when it comes to the question of pulpwood we apparently lose sight, in a large degree, of the labor problem, and consider that our pulp wood has cost us so much per cord, and let the subject drop at that point. To bring this phase of the situation home more clearly to you, and also for my own edification, I have asked the accountants of the Laurentide Company to get out for me a statement showing the total amount of money expended in the labor utilized in the making of our logs and driving them to the mills over a period of one year, and also the total amount of money spent for labor in converting these logs from their original state into finished pulps and papers and loading them on to the cars ready for shipment.

It was certainly a surprise to me, and I think it will be to you also, to find that the total expenditure in the woods exceeded the expenditure in the mills by about 25 per cent. If, therefore, we are justified, as we feel that we have proven we are, in building up a large organization and employing the highest trained technical skill for the efficient operation of our mills, how can we justify ourselves in not expending a similar amount of energy and careful thought on the question of getting out our timber?

These are times when many radical ideas are being brought forward; when business and commercial methods that we thought were impracticable are being forced upon us, whether we like them or not. The labor market is becoming more and more difficult to handle, and the necessary remuneration for this labor is still rising. The question of providing proper food for the men in the woods has become not only a problem from the commercial and financial point of view, but must be also viewed from the patriotic standpoint—these men should be fed, at least in part, on a quality of food not demanded by our men in the trenches.

Is it not, therefore, necessary for us to put away our preconceived ideas as to how certain kinds of work should be accomplished and, at least, try out that which which will at first appear to us to be rather radical and drastic methods?

Spruce Deal Exports Fall Off

Transportation Troubles Are Chief Cause—Log Cut on St.

John River Will Be Less Than Last Year

That the logs cut on the Upper and Lower St. John River will be considerably smaller this year than last is a statement of J. Fraser Gregory, of St. John, N.B., president of the St. John River Log Driving Company. It is estimated that thirty to thirty-five million feet of logs will come through the booms this year. Last year the figure was in the vicinity of thirty-two million feet, although considerably more were cut than were got out. The decrease this year, according to Mr. Gregory, is due to the shortage of labor and the large amount of snow in the woods, which make operations very difficult. The snow will, however, make conditions for spring driving much more favorable. The cut in the whole province in 1918 will probably run about 50 per cent. below normal.

While cargo space this year will probably be very difficult to obtain, it is understood that the government authorities will provide certain accommodation for lumbermen, the same as was done last year.

Some Shipments in Detail

The effect of the war is shown in the greatly decreased trans-Atlantic spruce deal exports for New Brunswick. This particularly applies to the North Shore ports, whose shipments have very largely fallen off. St. John shipments in 1917, compared with the previous year, show a decline of over thirty million feet, due to the difficulties of transportation. One firm has the distinction of shipping more deals than all the other combined. The figures are as follows:

		Sup. feet.
G. McKean & Co.	1917	50,378,603
	1916	39,730,389
W. M. MacKay, Ltd.	1917	26,431,227
	1916	43,206,372
J. E. Moore & Co.	1917	8,813,730
	1916	32,139,709
Other shippers	1917	3,126,016
	1916	17,202,279
Total	1917	88,749,576
Total	1916	132,278,749

Shipments from other ports in the Maritime Provinces were:

Campbellton			
Year.	Number of vessels.	Tons.	Deals, etc. Sup. feet.
1916	59	59,323	69,045,740
1917	6	16,764	15,083,289
Dalhousie			
1916	9	11,676	14,500,000
1917
Bathurst			
1916	28	30,143	36,932,222
1917	1	159	161,813
Chatham			
1916	78	32,082	47,234,540
1917	3	7,577	7,260,095
Newcastle			
1916	97	47,805	54,602,343
1917	2	5,722	4,463,779
Richibucto			
1916	8	1,435	1,732,272
1917
Sackville			
1916
1917
Albert			
1916	2	3,296	4,196,670
1917
Shediac			
1916	1	769	973,000
1917

Recapitulation of Export Data

A recapitulation of these figures shows that the total exports for New Brunswick in 1917, compared with the previous years, were as follows:

	Spruce deals. Sup. feet.
1914	217,906,813
1915	325,890,743
1916	390,328,479
1917	115,718,552

Better Dock Facilities Needed

One Way is to Erect Warehouse in Which Lumber and Other Products Can Be Stored Previous to Shipment

By E. L. Todd, Montreal

When I got my first glimpse of the harbor of Montreal, in 1891, I received a very poor impression of the docks, which were some 16 feet below the level of Commissioners Street. Wood sheds built on piles driven into the ground formed the docks. Merchandise was strewn all over the place, exposed to all kinds of weather, mud, and dust galore. The G.T.R. and C.P.R. were the only two railways with access to the docks, and all merchandise was teamed into sheds. A vessel had to discharge the inward cargo and then to load in the same berth. The conditions were almost indescribable—teamsters knocking over valuable merchandise, others driving over it, lumber piled forty tiers around the shed, any place it could be put. Eight to ten thousand feet was all a car would hold, being about 30,000 pounds capacity cars, whereas now anywhere from eighteen to twenty-four thousand feet is placed in a car of 60,000 pounds and as high as 100,000-pound cars are available.

The condition above referred to has been radically changed. The main wharf has a concrete face, whereas previously it had a wooden face. Piers 1,000 feet long stretch out into the river. Steel double-deck, fireproof dock sheds are placed both on the main or shore wharf and piers permitting of two ocean-going steamers on each side of the piers. Double tracks also run alongside each shed, where the through freight cars are unloaded and inward freight loaded. The harbor commissioners look after all cars brought to the wharves, having their own engines, and place all cars to whatever shed or section they are ordered to by consignees. Lumber has to be carted into the sheds as in days of old, unless it is on a through bill of lading, when the harbor commissioners' engines place it alongside the sheds. When times are normal the sheds even yet are not large enough or give sufficient space to load and unload a cargo, and I suggest that one way to meet the situation is to erect warehouses in which lumber or other products could be stored previous to shipment.

Lumber exporters have always been handicapped when the goods are sent to the wharves. The steamship companies sometimes do not want the traffic, having better freight in view; in the event of heavy shipments of produce, some other freight has to suffer, and generally it is lumber. Much remains to be done in the way of improvements to cheapen the cost of handling lumber. Each year the cost has been rising, partly owing to increased wages and partly owing to lumber exporters not being able to do a full day's work. In the old days we could start on a Saturday, after the steamer had sailed, and continue each day; but now we have generally two good days in a week, as the steamship companies do not care to have cargo in the sheds when passengers are embarking or disembarking. If the steamer has a large cargo, all the room possible to get the cargo out is required. Then often the grain is first landed, after which lumber is required to cover the grain, and we have only about two days to deliver, say, 300 standards of lumber.

Timber Resources of Northern Manitoba

By J. A. Campbell, Commissioner of Northern Manitoba

Many years ago the northern part of Manitoba as far north as what is known as the "Barren Lands," was thickly covered with a forest growth of spruce, tamarac, jack pine and other northern trees. Great areas of this was timber of merchantable size and besides there were immense stretches of valuable pulpwood, but during the last 25 or 50 years millions of dollars worth of this, one of our most valuable natural resources, have been destroyed by fire. In many parts of the burned area a new growth has sprung up which is now well developed and in the course of from 15 to 25 years, if properly protected, will be an exceedingly valuable asset. However, outside of the burned areas there are still great stretches of valuable timber and pulpwood which, taken in conjunction with means of transportation now available, and the existence of water power near them in almost every instance, form an exceedingly valuable resource and one which should be protected, conserved and developed with the greatest care.

Mr. J. B. Tyrrell has made frequent trips into the north country and perhaps to him more than any other man is due our knowledge of this resource, as well as much other information regarding the country. From Mr. Tyrrell's reports it is learned a great deal of timber in the territory in question has been destroyed by fire. On Grass and Minago rivers there is still some forest of excellent white spruce, but on the northern part of Burntwood river this is rather scarce. Black spruce and canoe birch grow on the more level and imperfectly drained areas. The aspen is the commonest deciduous tree, as it grows on the drier uplands everywhere, occasionally forming beautiful forests. "The forests surrounding Reed Lake are mostly of poplar, but there are some good growths of fine large spruce about

25 inches in diameter." On the southwestern shore of Lake Athapuskow, "considerable areas are covered with large white spruce." At Wintering Lake, "the surrounding areas rise gently from the water and are densely wooded with close forests of white spruce, growing on the rich clay soil." An old fur station near Setting Lake was found by Mr. Tyrrell "considerably overgrown with large spruce trees quite indistinguishable from those of the surrounding forest."

In an exploration trip in connection with the Hudson Bay Railway, Mr. J. W. McLaggan covered the territory immediately north of The Pas, and the following information is obtained from his report. The first portion is covered with small mixed timber. North of Cormorant Lake there are at least five million feet of good milling spruce and a very considerable area of the same south of Reed Lake. North of Herb Lake are spruce and poplar fit for railway ties and pulpwood. If fire had been kept out there would have been a big timber area in this district. Reafforestation is now being effected. Between Reed Lake and Elbow Lake he saw about two million feet of good spruce and poplar, averaging 12 to 14 inches in diameter.

In the report of W. Thibideau on an exploratory survey of the ground between Fort Churchill and The Pas in connection with the Hudson Bay route is found the following:

"All the timber, between the head of the Little Churchill river and Churchill is reserved for fuel purposes. The pulpwood belt begins at Split Lake and extends to The Pas, ten miles in width on each side of the way proposed for route of Hudson Bay Railway. On this area, assuming one-sixth to be covered by pulpwood, the balance being river, lakes, ponds, swamps, etc., and assuming 10 cords per acre of an average of 6 inches in diameter, there would be 5,756,600 cords. This is a very low but safe estimate."

In 1910 Mr. J. R. Dickson, Dominion Forestry Branch, made an inspection of timber along the line of the proposed Hudson Bay Railway from The Pas to Split Lake. He covered a distance of some 235 miles along the line of railway. Mr. Dickson deplors the ravages made by fires in the past, but points out that a great deal of new growth will soon be suitable for pulpwood. He intimates that if general drainage conditions could in some way be improved so as partially to replace the black spruce with the white spruce the wealth producing power of the region would be immeasurably greater.

Mr. J. A. J. McKenna concludes each section of his report on the Hudson Bay route with a recapitulation or summary from which is taken the following:

"It would seem that after the Saskatchewan is spanned at The Pas, construction of a line of railway to Churchill would not be unusually difficult or expensive, and from reports it would appear there are in the intervening country stretches of fair timber. The country about the Bay has only been glanced at by explorers. Merchantable timber has been seen and vast stretches of pulpwood."

Pulp Companies Protest at Tax

A deputation representing the pulp and paper companies of British Columbia recently waited upon Premier Brewster and the members of the cabinet and entered a protest against what they claim are the inequalities of the income and business tax. The companies take the ground that the 10 per cent. income tax which they are required to pay does not provide for proper and fair exceptions. They consider one exception, which should be allowed, is that covering interest paid on outside borrowed capital. The Powell River Company, for instance, has approximately three and a half million dollars of outside borrowed capital. Under the present law it has to pay taxes upon the interest paid on this capital. The deputation also pointed out that an exception should be made for depreciation upon plant; also for salaries of the manager and director, as well as on the 4 per cent. war tax paid to the Dominion Government. Under existing conditions the companies have to pay the province a tax on all of these items, as well as upon the residue. The delegation claimed that this type of taxation would keep capital out of the province. The proper principle to adopt, argued the visitors, was that of placing taxation upon profits or net income.

Hardwood and Softwood

A query reached me lately as to the distinction between the terms "hardwood" and "softwood." The only distinction, as far as I have been able to find, is that the term "hardwood" is applied to broad-leaved trees without reference to the hardness or softness of the wood, and softwood to coniferous trees, says a correspondent in the "American Lumberman."

The distinction between hardwoods and softwoods is correctly stated in this letter. In other words, each of these terms, when written as a single word, has a different meaning than that which would be applied to them if written as two words. A hardwood may be either a hard or a soft wood, such as basswood. Most of the so-called softwoods are really soft as compared with the hard deciduous woods, and yet what are known as the hard or yellow pines, and particularly the Cuban pine, are woods of considerable density, strength, and hardness.

Largest Pulpwood Stacker Ever Built

By W. W. Hibbard, Mgr. Eng. Construction, The Jeffrey Mfg. Co.

The accompanying illustration shows clearly the general arrangement of the stacker recently erected for the Lake Superior Pulp & Paper Company at Sault Ste. Marie, Ont., Canada.

This stacker was designed to solve the problem of storing of a certain quantity of 2-foot pulpwood upon an area which was limited and rather irregular in shape. For this reason a pulp stacker made with a rigid boom always extending in one direction could not be used satisfactorily as part of the area could not be served by such a machine.

For this reason a stacker, of the special design illustrated, was designed and built, and is now operating satisfactorily. The wood is received in the cable conveyor, shown to the left, which comes from the slasher building delivering to the wood room. This conveyor has a capacity of practically 100 cords of 2 ft. wood per hour, and is a standard Jeffrey wire rope conveyor operating at a speed of approximately 100 ft. per minute with circular flights spaced 3 ft. centers.

The huge stacker at work at Sault Ste. Marie, Ont.

The trough of the conveyor is made on bents spaced 16 ft. centers and one-half of the trough between the bents is hinged, allowing the trough to drop down, and by the use of these doors the wood is turned from the trough and dropped into the hopper of the stacker by which it is elevated and placed in storage.

The stacker consists of a structural steel frame about 40 feet square running on two standard gauge railroad tracks which are spaced 40 ft. centers. In order to overcome the inequality of loading caused by the peculiar design, the stacker travels upon four trucks, two of which are six-wheeled equalizing trucks, the other two are four-wheeled equalizing trucks, the wheels so spaced as to make an excessive loading either upon the rails or ties of the track. Upon this truck is mounted a stiff-legged derrick with the boom swung back between the stiff legs. The mast of the derrick is open, allowing the boom to extend through it down to the ground, so as to receive the wood from the stacker without the use of an intervening unit. This boom is 4 ft. deep and 6 ft. wide and is braced back to the top of the mast by three sets of double guys, each made up of four 2-inch wire ropes. These guys, of course, are provided with turn buckles, equalizing the strain upon them. The length of the boom from the center of the lower pin to the head shaft of the conveyor is 180 feet, while the boom overall is practically 200 feet long. The distance from the head shaft to the track level upon which the stacker runs is 106 feet, allowing the stacker to pile pulpwood to a height of over 90 feet, with no chance of the wood interfering with the free swinging of the boom.

Upon the boom is a wooden trough in which travels one strand of Jeffrey No. 132 chain fitted with spurs and attachments every 5 feet, as shown on the attached cross section. This chain travels at a speed of 140 feet per minute, and the stacker has a nominal capacity of 40 cords of 2-foot wood per hour, although it has handled as high as 60 cords per hour for a short period. The motion of the boom allows the stacker to cover the 40-foot space over which it runs between the tracks, adding many thousands of cords to the storage capacity of the mill. The special features of this design have given an elastic and economical scheme for the handling of wood and have proven very satisfactory to the Paper Company. This stacker was designed, made and erected by the Jeffrey Manufacturing Co., Columbus, O.,

Inspection of Spruce is Rigid

Compared with the price of \$125 per 1,000 feet for spruce paid on this side of the line the price in the United States is \$105, but in addition to that a bonus of \$30 per 1,000 feet is given for deliveries within a stated period, said Mr. Lester W. David, lumberman, of Seattle, who has returned from a visit to the East.

Unless a ship was being built for the United States Government it was almost impossible to get the lumber that was required. The supply of spruce, or rather the speed with which it could be got out, was nothing like commensurate with the demand, for the government required at least 14,000,000 feet a month, and only about 4,000,000 feet could be delivered. Only the highest grade was accepted for aeroplane making.

To give some idea of the rigidity of the inspection of the timber, Mr. David said the experts went over it with a magnifying glass. If the grain went "off" the least bit the piece was rejected. In the spruce accepted the grain had to run perfectly, and there had to be a certain number of rings to the inch. All four sides had to be perfect. Latterly the lumbermen had been permitted to cut the spruce in lengths of four to eighteen feet, leaving the factories to finish it off as they desired. The most difficult task was to secure the lengths suitable for wing beams.

Washington and Oregon had received all the orders for spruce, as those were the only states in which it grew in sufficient quantities. In one county alone, near the mouth of the Columbia River, there were calculated to be at least 1,300,000,000 feet, but the percentage that could be used for aeroplane purposes ran about the same as it did in British Columbia—around 10 per cent. Of course, none could be taken across the line, in either direction, on account of the embargo.

Co-operation in Forest Protection

Mr. Auguste Tessier, of Rimouski, has a bill before the Quebec Legislature that affects forestry companies. He asks for a new clause in the statutes to the effect that, notwithstanding any provision to the contrary, any company incorporated under the Quebec Companies Act and whose principal object is the protection of the forests in the province, or in certain parts of the province, against fire, may by by-law provide that the Minister of Lands and Forests, or such person as he may from time to time designate, shall be a member ex-officio of its board of directors, and that the other members, or some of the other members, of its board of directors, instead of being elected at the general meeting of the shareholders, may be appointed, one by each other company incorporated under the same act for similar purposes and holding in its own name or in the name of one or more trustees one or more shares therein.

It is not required that such additional directors shall have the ordinary qualifications of directors. The object is to have greater co-operation between the government and the companies and between the companies themselves. A company which controls a forest area can secure the co-operation of a neighboring company by having one of its officials on its board of directors, the interlocking directorates to more effectively devise means to defeat forest fires.

Another Vagary in Lumber Shipments

At a recent sitting of the Board of Railway Commissioners in Toronto, Robert Laidlaw, of the Laidlaw Lumber Company, complained of the reduction on lumber consignment minimum railway tariffs. Rough lumber, he said, was allowed on the rails at minimum rates at 40,000 pounds a car. If this same lumber was planed and later reconsigned the company was charged the same for shipment of this planed lumber, considerably reduced in size and weight, as for the 40,000 pounds of the rough, unfinished product. The railroad counsel contended that their companies were due the extra percentage by reason of the extra care needed in the transshipment of the finished product. The Canadian Manufacturers' Association representatives were advised to take this matter up in conference with the railroads.

Over One Hundred Ships Built

During 1917 there was a remarkable development in shipbuilding at many points in the Dominion, due largely to the orders placed by the Imperial Munitions Board. At the close of the year these orders involved an outlay of \$90,000,000 on over one hundred steel or wooden craft with a total carrying capacity of 350,000 tons. Orders from Norwegian shipping companies have been placed for 22 steel vessels of 3,500 tons dead weight each. In addition to the foregoing, many smaller vessels are being built for private account. In every case, however, shipbuilders are seriously handicapped by the lack of skilled labor and of supplies. The chief difficulty in the construction of wooden vessels in Eastern Canada is to obtain British Columbia fir and Oregon pine, but this will be obviated to a great extent, it is hoped, by securing heavy timbers from the forests tapped by the Transcontinental Railway between Quebec and Moncton.

WANTED & FOR SALE DEPARTMENT

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line (14 agate lines make one inch.) \$2.10 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word, net. Cash must accompany the order. Minimum charge 50 cents.

Advertisements must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

Wanted-Lumber

WANTED TO BUY—Sawdust. Apply Box 697, Canada Lumberman, Toronto. 5-5

WANTED TO BUY—Slabs and Cordwood. Apply Box 696, Canada Lumberman, Toronto. 5-5

WANTED TO BUY—Basswood and Hemlock. Apply Box 698, Canada Lumberman, Toronto. 5-5

WANTED TO BUY—Standing timber with or without land. Apply Box 695, Canada Lumberman, Toronto. 5-5

Wood and Sawdust Wanted

100 cars slabs and sawdust for spot cash soon as loaded. Address Box 676, Canada Lumberman, Toronto. 4-7

White Pine Wanted

Always in the market for good White Pine. Please write us.

The Fisher & Wilson Company, Cleveland, O. 1-t.f.

Basswood Wanted

No. 2 Common and Mill Cull. Winter cut preferred. Apply Firstbrook Brothers, Ltd., Toronto, Ont. 8-t.f.

WANTED—One car of 3 in. No. 1 and Clear Spruce; two cars of 2 in., also some 1 in, 1 1/4 in. Quote lowest price.

EDWARD C. BRADLEY,
Gerke Building,

5-6 Cincinnati, Ohio.

Pine, Etc., Bolts Wanted

Pine, Basswood, Whitewood and Spruce Bolts, eighteen inches long. Quote F. O. B. Bothwell, Ontario.

REID BROS.,

4-6 Bothwell, Ont.

Birch Logs Wanted

Wanted—Prime No. 1 Birch Logs for rotary cutting, 16 in. diameter and up. State price, earliest delivery. Box 675, Canada Lumberman, Toronto. 4-7

LUMBER WANTED—For immediate delivery, several cars Beech, and Maple, 2 and 3 inch plump. For future delivery several cars Rock Elm, cut 2 1/4 and 3 1/4 inch. Spring and summer delivery. Quote prices to

The St. Mary's Wood Specialty Co., Ltd.,
5-6 St. Mary's, Ont.

4-7 North Cobalt, Ont.

For Sale-Machinery

Steel Rails For Sale

A small quantity of 20 lb. light re-laying rails, for sale for immediate delivery. Apply Box 651, Canada Lumberman, Toronto. 5-5

Slab Resaw For Sale

For Sale—Very fine Mereen-Johnson No. 24 Slab Band Resaw. Wheels 50 in. for 8 in. blade. Box 692, Canada Lumberman, Toronto. 5-6

Machinery For Sale

Light Planer, Matcher and Moulder.
Variety Trim Saw.
Power Feed Rip Saw.
36 in. Band Saw.
12 in. Heavy Moulder.
12 in. Jointer.
Three Drum Sander.
Other Woodworking Machinery.

A. J. LINDSAY,

90 Pembroke Street,
2-5 Toronto, Ont.

Planer and Resaw For Sale

One Double Surfacers endless bed planer, 12 x 26, Clark Demill make, as good as new.
One Jackson & Cochrane Band Resaw, 56 in. Box 70, Sarnia, Ont. 5-6

For Sale

Very fine 18 in. and 32 in. x 42 in. Cross Compound "Brown" Engine, approximately 400 h.p., built by Polson Iron Works. Has 44 in. x 16 ft. Belt Pulley. Splendid condition. Immediate delivery. Box 654, Canada Lumberman, Toronto. 24-t.f.

FOR SALE

One Union Iron Works Upright Resaw, 8 ft. wheels, with drive pulleys.

One Improved Mershon & Co. Horizontal Slab Resaw, 5 ft. wheels, for 8 in. saws. Used only three years.

One Tug Smoke Stack. Size 34 in. x 23 ft., 10 gauge iron.

One Three Saw Edger, Waterous make.

One Smoke Stack, 26 in. x 73 ft., with 7 ft. Spark Catcher, 10 gauge iron. From 40 ft. to top 12 gauge iron.

One Timber Surfacers, 30 in. Cylinders, with 14 in. Side Heads.

McGregor & Gourlay Shop No. 8461, Cut No. 202.

One two Spindle Shaper. McKechnie & Bertram make.

Two sets of Prescott Steam Set Works.

The Pigeon River Lumber Company, Limited,
5-8 Port Arthur, Ont.

For Sale

One tandem compound Goldie & McCulloch steam engine, 135 h.p. rating.

One Laurie Engine Co. 13 x 30 Corliss engine.

The above engines are in A1 condition.

We have also a large amount of 4, 6 and 7 in. wrought iron steam and exhaust pipes, complete with valves and fittings. The price F.O.B. cars will be quoted to those interested.

Apply H. M. Miller, Water, Light & Heat Commissioner, St. Marys, Ontario. 3-6

TOWNSHIP OF FOSTER

36 square miles splendid body mixed timber; pine, hemlock, birch, spruce, elm, ash, maple, pulpwood, cedar poles and ties, cordwood. Roads cut, streams improved. One of cheapest operations on North Shore. Supplies landed on limit from Algoma Eastern Railway and C. P. R. within hauling distance. Ideal portable mill operation. Suitable for furniture manufacturers. Cheap railway rate to Little Current for water shipment. No time limit for cutting all classes of timber. Apply, R. B., Box 682, Canada Lumberman, Toronto. 4-8

Wood Needed for Many Purposes

Probably at no time in the history of nations have the forests and their products been of such vital importance to mankind as they are today, says Professor R. C. Bryant, of the Yale School of Forestry.

In the early wars no less than in the present, the forest has played a most important part, for the ancient warriors fashioned their bows and cross guns from the products of the forests, built their battering rams, the predecessors of artillery, from the trees of the forest; and did not the Greeks capture Troy by means of a wooden horse? Not only have the forests been a source of material for warriors' weapons from time immemorial, but also they have played a most striking part in war manoeuvres by providing screens for artillery, troops and supplies.

Reliable estimates of the amount of timber which has gone into the shoring up of trenches and dugouts, into the miles and miles of trench sidewalks and corduroy roads, and into artillery and trench screens are not available, but the quantity, on the hundreds of miles of front, surely totals up to several hundreds of millions of feet. On the statement of a French colonel it is learned that as high as 30,000 trees were used daily by a single French army corps.

Wood products are a very important factor entering into the manufacture of munitions, for without charcoal black powder used in such large quantities in explosives, especially shrapnel, would be denied us. Rosin, a product of our southern yellow pine forests, is used by the thousands of barrels in the manufacturing of shrapnel, serving to hold the bullets in position in the explosive shell head.

Review of Current Trade Conditions

Ontario

Although the weather during the past week moderated to a considerable extent, lumber manufacturers, wholesalers, and retailers report but little improvement in the transportation problem. It is still exceedingly difficult to get cars, and traffic men of the various organizations have to keep on the job night and day to get any degree of satisfaction out of the railways. Some of the embargoes have been removed, and the hope is expressed on all sides that, with the return of several thousand Canadian cars which were over the American border, better facilities will be provided from this out. Wherever members of the trade foregather, the principal topic of conversation is the distribution problem, which has been crippling both production and sales.

Prices on the whole are well maintained, and the outlook for still higher figures is evident. Some of the sharp advances that have been made by the mills on both hard and softwoods have not yet been passed on by the wholesalers to their customers, but the trend is upwards on every hand. One matter that was a disturbing factor for some days was in regard to the blanket order from Washington, that all imports from Canada over \$100 in value would have to be accompanied by an import license, which would have to be attached to the bill of lading. Had this measure taken effect with respect to lumber it would have congested conditions worse than ever at all border points. Latest advices received, however, are to the effect that lumber has been exempted from the import license regulation.

There is a good demand from many American points for pine, spruce, and other woods for war work. Some shell box contracts have also been awarded by the Imperial Munitions Board, and it is expected that others will be handed out in a few days. The principal woods used in shell boxes are birch, maple, soft elm, and brown ash for the ends, and spruce, red and jackpine and white pine for the sides.

With the majority of retailers stocks are low, and buying will not be undertaken in any large quantities for a few weeks yet, until it is seen how building operations loom up. The labor shortage continues acute. Business in the furniture manufacturing line is reported as fair. Sash and door factories are rather quiet. In shipbuilding, aeroplane, and war jobs generally there is a lively requisition for spruce, while Douglas fir is also being used to a considerable extent.

Although it is claimed that contractors are rather chary regarding the erection of new dwellings, contending that, at the present high quotations, they cannot get their money out of the houses in either renting or sale values, nevertheless, with the increase in population in Toronto, for instance, it is recognized that the problem of putting up more residences must be given attention. One firm reports that it has contracts on hand to supply lumber for forty new domiciles, while a large contracting firm is figuring on the erection of over a hundred houses in the east end. If all the projects develop which are being canvassed, there may be a much better building season than at the present moment seems probable. Lath and shingle markets are generally quiet.

Eastern Canada

The car shortage is still an acute problem in connection with transportation matters. Last winter the trade thought that they had reached a climax, but the troubles have been intensified a hundredfold this year by reason of the exceptionally cold weather and the shortage of labor. The latter has been brought about by conscription and heavy drafts made for forestry battalions, munition plants, etc. With the advent of milder weather and the return of numerous freight cars which have been over the line to the roads in Canada, it is anticipated that conditions will slowly improve. There is a very good demand for lumber for United States requirements, and this is the one satisfactory feature of market conditions. Lumber companies have given more attention during the past few weeks to distribution than they have to prices or manufacturing conditions. Stocks have been piling up in the mill yards, and no relief appeared to be in sight. Even when cars were secured, embargoes placed here and there practically put matters at a standstill. The embargoes are now being lifted and prices are being well maintained. There is no disposition to cut the figure on any lines, as when the raw material costs so much the manufacturer is not anxious to turn over his finished product without a profit.

Then, too, there is the uncertainty of securing supplies owing to the decimated cut in the woods during the last season. Business has been rather quiet in all Eastern centres during the past few weeks, and the outlook for building is not bright. With the advent of spring

more is heard in regard to construction work, and, if certain plans materialize, the improvement will be somewhat more pronounced than it has been during the past few months. Tenders have been let for some shell boxes, and this will help matters along in some lines of wood. On the whole, the market is very firm. There is a wide divergence of opinion in regard to stocks. In some points they are reported heavy, owing to the extreme congestion, and at other centres they are light.

United States

A better tone now prevails throughout the industry in most states, owing to the improvement of the weather and alleviation in transportation congestion. Sales have picked up quite a bit, and the outlook is considered good. In hardwoods the government requirements continue to make up the bulk of the business, and in the South production is being steadily increased, while the supply of logs is good, generally speaking. If there are no freshets matters should move along very satisfactorily. A number of small loggers have been operating all winter, and the result of their output is now seen in increasing the total of hardwood production. A number of new mills will also start operation, particularly in the North.

One recent announcement of interest is that the names of all firms having contracts for the government shall be made public, according to an order of Secretary of War Baker. Among the woods sought suitable for manufacturing of airplanes are cherry and birch. In lath and shingles the market seems to be firming up a bit. Just now the supply of cars is considerably better. Logs are scarce and high in price. There is not an abundance of lath at present, due to the shortage in supply, and the market holds up well, with the exception of certain sections in the East.

The most spectacular wood in the market at the present time is spruce, and each week sees greater activity on the Pacific Coast. Every effort is being concentrated to secure the right lengths required for airplane building, and the rest of the business is more of a side line character. A great deal of side lumber is thus produced, and were cars more plentiful the mills would not have any trouble in getting rid of stocks on hand. Prices are firm. Building operations in the way of new residences are not very active as yet, but there is considerable repair work going on, while a number of office structures are projected in the different cities. Prices for spruce hold very firm.

The demand for hemlock is below normal. One thing which tends to keep the hemlock manufacturers in a fairly happy state of mind is that prices on all kinds of competing woods are well maintained, and, as long as this continues, there is little need to fear for the unsold stock. Production in white pine in both the North and West is being speeded up, and more lumber will be cut than in 1917 if present indications are any guide. In the West the winter has been fine for logging, and in the North conditions have been propitious, except for the shortage of labor. Buying for box factories is very busy. While the retail yard men declared that not much business has developed as yet, they have little apprehension, but that that requisitions will come in more numerous as spring approaches, for it is generally conceded that white pine is splendid for exterior finish, and much of the business that yards will do will come from the building of a number of such structures as barns, implement sheds, etc.

Great Britain

In the English market much uncertainty still prevails regarding the prospects for the coming year. In the Liverpool district stocks are light and arrivals small. The volume of business in timber has, therefore, been on a comparatively limited scale. Prices, however, keep firm, and indications point to higher values before long, owing to no definite date for the ending of the war looming up. Many firms are of the opinion that values would be considerably reduced if better shipping facilities were accorded the carrying of timber and arrangements made for freight space on a more substantial basis than at present prevails. There is, however, no immediate outlet for amelioration in existing conditions. So far as business in spruce deals, etc., is concerned, deals on a c.i.f. basis are quite a thing of the past, as there is an absence of private trade even in the smallest quantities, through the only possible medium at present, namely, the liners.

The demand for all kinds of native timber keeps brisk, and trade is gradually extending in every possible direction. One cause for the activity is the growing need of oak for wagon building. Elm, beech, and ash are scarce, and available stocks fall short of the present requirements. One great difficulty is the lack of labor in order to convey the trees to the sawmill.

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

ON CONDITIONS AT
HOME AND ABROAD**

Transportation Problems Halt Trade

Ottawa, February 25 (Special to the "Canada Lumberman") :— The Ottawa lumber market during the first week of the latter part of February passed through one, if not the greatest, periods of trial in its existence. Circumstances and happenings which had never before been encountered by lumbermen faced the trade. A great shortage of cars, coupled with embargoes on American railways, together with the decree of the American Government putting the license system on imports in vogue, all tended seriously to mitigate against former trade conditions and transportation facilities. Unfavorable weather also impeded many shipments.

Not only the Ottawa district, but the whole Ottawa Valley lumbering trade, if not the entire trade in Canada doing business with the United States, was seriously affected by the newly created conditions. Cars lately scarce enough, were at a premium, and when secured were prized by the shippers as the ordinary householder values the last piece of coal in his bin. Even though in rare instances manufacturers did get cars, they had new difficulties getting their shipments across the border.

By the license system order of the United States business was upset, and while there was a strengthening of the market so far as prices went, there was much uncertainty as to what would be the outcome of the newly created conditions.

On February 19th and 20th the "blanket release" order, permitting shipments of lumber at the border to enter the United States prevailed. On February 21st the trade was informed that conditions had been somewhat modified, whereby shipments could proceed to destination, and the consignee then have to secure a license from the United States Government to permit him actually receiving the shipment. At the end of the week it was generally taken by the trade that the "blanket license" system would not likely apply later than February 28th, and was only a temporary measure.

The situation regarding embargoes to various United States destinations which previously prevailed for some time showed little or no improvement. The embargo against Philadelphia, although raised, did little good, as the embargoes on intervening lines of transit thereto were not removed. Thus, while Philadelphia was open as a shipping point, shipments could not be got to it, as one or another of the embargoes was in force on an intermediate railway line. Consequently shipments destined to Philadelphia and thereabouts suffered severely.

Millions of feet of lumber, and thousands of carloads on order, were tied up in the Ottawa Valley on account of the embargoes and the transportation facilities. Reports from trade circles to the "Canada Lumberman" indicated that hundreds of cars were tied up in mill yards and could not be moved.

Orders, inquiries, and prices collectively, for once in a very long time occupied second position in the minds of the lumbering trade. The "floor" was held by transportation, embargoes, and speculation as to what the outcome of the American Import License system would mean to lumbermen.

So far as normal market conditions went, business was reported good, with indications that the volume of trade this spring would considerably surpass that of a year ago and 1916. Cars, embargoes, and licenses were the three uppermost factors.

Prices on the intermediate grades advanced. Stocks did not show much change. Orders and inquiries continued good. The woods labor situation continued to fluctuate.

One of the principal reasons given for the changing circumstances of the woods labor situation was that the log cutters and other woodsmen having received higher wages for their labor this year had a tendency to leave the camps early and spend their earnings. With several companies it is expected that some men will return for the spring drive, but even if they do, their absence during the present critical period considerably affected the log output.

One opinion is that the log output of the Ottawa Valley this year will show a decrease of from forty to fifty per cent. as compared with that of 1917.

The demand for stocks suitable for building purposes remained slow. The sash and door trade displayed little or no activity.

Tenders for shell boxes were issued by the Imperial Munitions Board around February 20th. The trade heard that further tenders for the 6 in. box would be issued by the Board on or about March 1st.

The principal demand since the month began is from the United States. Although some stocks cut for the English market were pur-

chased, there has been no change in regard to the regulations governing shipments of lumber to the Old Country.

R. Cox and Company placed their annual order with John R. Booth for half of his output of deals. The order, it is said, was around a million feet. The price, while not announced, was believed to be correspondingly higher than last year. Cox and Company report the purchase was not particularly for the English market. This company indirectly will be somewhat affected by the embargoes and license system in the United States as last year they exported a considerable quantity of deals to the U. S. A. The European market for deals remains unaltered and that is, no change affecting the British export embargoes.

George M. Mason was awarded a contract for 40,000 4.5 in. shell boxes. The price, it is said, was in the neighborhood of seventy-two cents per box. The contract was the only one secured by an Ottawa plant during the closing period of February.

Gilmour and Company report the market very firm, and that high, if not record prices, are being received for stocks. Congestion on American roads is bothering this firm. Mr. Gilmour predicts that if the present demand stays prices are likely to advance from three to four dollars per thousand feet before midsummer. Orders and inquiries for export are favorable.

W. C. Edwards & Company declare that the car and transportation situation is the worst in its history. Between eleven and twelve hundred cars on order are delayed in shipment. Business is reported as being as good or a little better than last year, notwithstanding the car situation. Good progress is being made with the large shell box order that this company received some time ago.

Due to the extreme car shortage and embargoes trade is reported as quiet with the Hawkesbury Lumber Company. "How can business be good if there are no cars or transportation?" asked Mr. R. L. Blackburn. Inquiries kept up as compared with the first part of the month.

McAuliffe-Davis had thirty cars of lumber tied up in its yard, besides hundreds of other cars which could not be milled. Embargoes were reported to be causing great trouble. Stocks were reported fair and prices good.

Estate of James Davidson hopes to complete its woods operations around March 15th. The order for 128,000 shell boxes which the plant received some time ago, will likely be completed during March. Mill labor was reported good.

J. Oliver and Son state that furniture is in good demand. Labor is at present plentiful. This plant completed a big shell box contract during the latter part of February.

Jackson Booth, sales manager of John R. Booth, asserts there is no improvement in the situation regarding the transfer of pulpwood from the limits to the mill. The car situation, he added, "is the worst I have ever seen." In the opinion of Mr. Booth, lumbermen will have to wait and see how the situation concerning United States shipments works itself out. The woods labor situation shows little or no change.

Shepard and Morse report orders and inquiries as being satisfactory. New business is developing. Mr. P. C. Walker, sales agent, reports the outlook for spring and summer business appears bright if the car situation and the various embargoes can be overcome.

Question of Prices is Uppermost

Montreal, February 25.—(Special to the "Canada Lumberman.")— One of the chief subjects of discussion among lumbermen is that of prices. It is, of course, known that there will be appreciable advances in the prices to be paid for the new cut, but there is considerable diversity of opinion as to the extent of the rise. Some wholesalers state that they found manufacturers disinclined to make quotations; the general disposition apparently is to adopt a "wait and see" policy. There are reports of some contracts having been closed at very high prices, while an exporter states that an advance of ten dollars has been asked for goods for the United Kingdom. The position of that section is very uncertain; it is not known what, if any, tonnage will be available, and the outlook cannot be called cheerful.

Local business is dull, the demand for building purposes being practically nil. Higher lumber prices are not conducive to building, notwithstanding an urgent demand for houses and flats.

There are enquiries for very large quantities of lumber on account of an extensive order for cars for the government.

The report that the Imperial Munitions Board has decided not to let further contracts for wooden vessels is confirmed. While this will have a serious effect on British Columbia business here, it is expected

that orders for private account will be given out. The yards are now fully equipped, and, as there will be a demand for a large number of boats after the war, it is more than probable that private owners will take the occasion of building vessels. Certainly Canadians have never had a more splendid opportunity to become shipowners.

For a time the report that the United States Government had imposed a licensing system on all imports into that country held up trade, but, fortunately, the United States Government rescinded the order, and lumber, in common with other commodities, is being shipped across the border. The car situation, however, is still far from satisfactory.

Rather Quiet in the East

St. John, N.B., February 25 (Special to the "Canada Lumberman")—As far as the lumber business at St. John is concerned it is to-day practically at a standstill. No change in the government policy of cross-water shipments has taken place. Today shipments by transport are down to nothing. Never at any time was it worse than now. Unless a change comes many of the mills will be so piled up that they will be unable to start when navigation brings forward their logs. The only avenue to which they can turn is to the United States, and with the weather conditions of the past two weeks the railroads have been put completely out of commission. Embargoes in the East have been against moving anything except foodstuffs. Today these embargoes have been lifted, and it is hoped that they are off to stay, at least, for a time. As far as prices are concerned it is useless to talk. There are no stocks moving, hence no prices; but one sure thing, the manufacturer is not weakening. He must get his price or go out of business, as his raw material is going up every day. Storm after storm has deepened the snow in the northern woods, until today it is hard work to keep the jobbers and their men in the camps. The cutting has been slowed up, day by day, with added cost to all concerned. There is no end to expense, and who will pay is the question, or where is the manufacturer going to get his profit?

Locally, business is extremely quiet. No house building is going on, and no outside work, as it is impossible to do any on account of the excessive frost and storms. It is certainly to be hoped that the severe weather shall break soon and business take on a new life.

Timber Measured at Quebec

The following statement shows the quantity of timber measured through the office of the Supervisor of Cullers, Quebec, during the year ended 31st December, 1917.

Description of Timber	Pieces	Cu. Ft.
Waney White Pine	1,893	131,720
Square Oak	2,258	124,680
Square Elm	3,264	117,360
Waney Oak	16	320
Waney Birch	772	15,880
Square Hemlock	5	80
Square Spruce	7	120
Waney Walnut	38	560
Square Hickory	1	40
Pitch Pine	2,497	41,230
Fir Timber	2,307	36,490
Total	13,058	468,480

Silver Spruce Export Regulations

Further regulations have been passed at Ottawa dealing with the exportation of silver spruce. It is now provided "that no railway or other transportation company shall accept any shipment of silver spruce unless the bill of lading covering such shipment is accompanied by a certificate from a well recognized lumber inspection bureau or association approved by the Minister of Customs that such shipment contains no silver spruce suitable for use in the manufacture of aeroplanes; provided, that this regulation shall not apply to shipments of silver spruce consigned to the Imperial Munitions Board."

A railway or other transportation company which fails to comply with the regulations is liable to a penalty of \$500.

Grading Rules Adoption Postponed

The secretary of the Canadian Lumbermen's Association, Ottawa, reports with respect to grading rules that the matter was submitted to the Executive Committee recently, and owing to conditions that may change radically within a very short time it was decided that nothing would be done in this connection, at any rate, until the war is over. The matter, therefore, remains in abeyance.

Will Aid New War Trade Board

Canadian Lumbermen Take Important Step and Appoint Joint International Committee—Interests of the Industry

Ottawa, February 25.—(Special to the "Canada Lumberman.")—An important step tending toward aiding the Canadian Government, through the medium of the recently established War Trade Board, and at the same time offering some protective measures to the Canadian lumbering industry, was made at Ottawa last week, when, at an executive meeting of the Canadian Lumbermen's Association, it was proposed that a committee of five Canadian lumbermen be appointed to furnish information to the War Trade Board.

The meeting was held during the latter part of February, and though the outcome of the resolution had not actually materialized up to the time this issue went to press, operations were under way to ensure its establishment.

The object of the resolution, as briefly outlined, is: That the Canadian Lumbermen's Association, through its appointed committee, furnish all possible information to the War Trade Board concerning Canada's lumbering industry and stocks obtainable for war purposes, or such other purposes as the War Trade Board might see fit.

Such a committee should prove an immense benefit to the War Trade Board, and would perhaps work out favorably to the interests of the lumbering industry. In a nutshell, the proposition means that Canadian lumbermen are willing to tell the War Trade Board all that it wants to know about the industry in the shortest possible time.

Presuming that the War Trade Board would proceed along the usual lines of sending out questionnaires, etc., so far as the lumbermen were concerned, requesting general information, the lumbermen were of the opinion that by appointing a representative committee to furnish all the data needed the interests of the board would be best served. The board, instead of waiting, perhaps, several weeks or longer to secure the information it desired, would have it readily and reliably furnished by representative persons intimately connected with the lumbering trade.

The Joint International Committee

The five lumbermen named to constitute the special committee were: Daniel McLachlin, Arnprior; W. G. Power, St. Pacomé, Que.; W. E. Bigwood, Toronto; A. E. Clark, Toronto, and E. R. Bremner, president of the Board of Trade, Ottawa.

Mr. Frank Hawkins, secretary of the Canadian Lumbermen's Association, has requested these gentlemen to act on the committee. There is no salary attached to the positions, and it is realized considerable time and conscientious effort will have to be expended.

Through the co-operation of such a committee with the War Trade Board the lumbering industry would, more or less, be in direct touch with fluctuating conditions which from time to time affect the lumbering trade.

The operations of the War Trade Board will likely in time have a very considerable effect on the lumbering industry of Canada—that is, if the war continues for a much longer period.

Big Timber Tract Bought

Report from Fort William, Ontario, Canada, are to the effect that the Nyando Pulp and Paper Corporation, of Rochester, N.Y., has purchased extensive timber limits in the Mille Lacs region, on the main lines of the Canadian Northern and Canadian Pacific Railways, 72 miles west of Fort William.

At his office in the Kimball Building, the president of the corporation said that the new holdings of the company comprise an area of some 200,000 acres, covered with spruce, pine, tamarac, and cedar, representing 2,350,000 cords of pulp wood, 125,000,000 feet b.m. of white pine, and 2,000,000 railroad ties. He added that there are saw and planing mills on the property.

The new owners say they have under consideration the erection of pulp and paper mills with an annual capacity of 15,000 tons of sulphite and 30,000 tons of newsprint, at Fort William, to be supplied from their new property.

Conscription of Spruce Limits

The British Columbia Provincial Government has passed an order in council taking power to arrange with the Imperial Munitions Board for the immediate logging of aeroplane spruce upon all vacant areas of Crown land and calls upon holders to proceed with the necessary operations forthwith. On failure to comply the right is reserved to the Department to make its own arrangements in co-operation with the Board. This policy is the result of exhaustive inquiries made by the Minister of Lands in conjunction with the western representative of Imperial Munitions Board, and will result in the tapping of valuable resources toward the end of securing approximately thirty million feet per month; about fifteen times greater than the average British Columbia output.

Sixth Annual Convention of the Canada Metal Company, Limited, Toronto

Manufacturers of Babbitt Metals, Lead Pipe, Sheet Lead, etc., from the
ores to the finished product

The Canada Metal Company, Limited, held the sixth Annual Convention of their sales staff at the Head Office in Toronto, commencing the week of February 4th, and when one considers that representatives of the firm from all parts of the Dominion were present, and that trade conditions were discussed on all territories from the Atlantic to the Pacific Coasts, it is no wonder that a most interesting and successful convention was the result. One salesman stated, "I have been selling metals all my life, and the first year we met I thought there was nothing more for me to learn, yet when I hear the views and knowledge of our other salesmen, I decide that as long as I live it will be necessary to come to these conventions with an open mind ready to digest and benefit all that is possible by the knowledge of others. The exchange of ideas and experiences gives a wider viewpoint and educates one for all emergencies."

Mr. W. G. Harris, Sr., President of the Company, gave an address of welcome and expressed his great pleasure in once more meeting the staff. Only once a year, he said, is it possible for us all to meet, and year by year the family grows, and today we have here managers and their salesmen, not only from Head Office, but also from our factories in Hamilton, Montreal, Winnipeg and Vancouver. In 1911, he further added, we moved to our new factory on Fraser Avenue, and to illustrate the growth of our business may

state that not only is our staff increased by more than twenty salesmen, but this factory has been enlarged five times in the period to cope with the great demand for our goods. We have also built factories and are manufacturing most of our lines in Montreal and Winnipeg. Our progress, he continued, has been remarkable and our success has been built on a sure foundation. The motto we stand by is "SERVICE AND DEPENDABILITY." Give excellent service, manufacture and sell goods of dependable quality, and success is bound to follow.

Mr. Harris also gave some good sound advice on square dealing. Know your business, said he, learn all there is to know about metals. Ask questions, teach and be taught, and thus ensure closer co-operation. He told how, during the Convention, they would have the opportunity of seeing many lines manufactured so that they could gain an accurate knowledge of what they were selling, and how and under what conditions various goods

W. G. Harris, Sr., President.

were manufactured, thus enabling salesmen to discuss intelligently any line manufactured by the Canada Metal Company.

Mr. Harris, Jr., Vice-President, presided at the Convention, and opened by going through the Annual Report. He gave some interesting figures. All sales have increased, and 1917 was the best year to date.

He further pointed out that no firm can stand still. It must either go ahead or go behind, and to go ahead after a successful year required greater efforts, more concentrated efforts, and more carefully organized efforts. Particularly is it necessary to take into consideration that some day the war will end, and give business a tremendous jolt during the re-organization which is bound to follow. Only those firms who prepare for after-the-war conditions can hope to reap the benefit when normal times arrive, and this is our reason why the organization must be kept to the highest pitch of efficiency.

Thirty-four items were on the Agenda, and following the review of General Sales was the presentation of the prizes for the various sales competitions. Then came a visit to the Lead Rolls; samples of Galena Lead ore were exhibited, and an address on how the ore was mined, smelted, or in some cases treated by electrolytic process to give the pure Lead. Then, following the melting of the Lead into slabs and sheets, were rolled in various thicknesses from 1/16 in. to 1/4 in., and in widths up to 7 ft. 6 ins. and any lengths. Next, a visit was made to the fine rolls, where the process of rolling fine lead or tin foils was witnessed, thus illustrating the fact that salesmen could see that no matter what the requirement in Sheet Lead it could be supplied on the shortest notice.

Another session was taken up in reviewing the sales of Babbitt Metals for 1917, which far exceeded any previous year. Mr. Harris, Jr., gave a very interesting address on this subject, illustrating the real meaning of specific gravity of Babbitt Metals.

An exhibition of how to pour Babbitt Metals to give best results was made most instructive.

The question was asked by one of the salesmen, "Why do we guarantee our Babbitt Metals to give excellent service?" This opened a subject of dis-

cussion, and should be interesting to all mechanics in lumber mills or wood-working plants where good serviceable babbitt metals are so necessary, and to illustrate and give a practical demonstration of its manufacture, first, a visit was made to the laboratory where tin, antimony, lead, zinc, copper, etc., were tested by the metallurgical chemist. Then the melting pots were visited, where three of the largest were being operated, each of them has a capacity of 35 tons—one of Imperial Genuine Babbitt Metal for large shipbuilders, one of Harris Heavy Pressure, and one of Low Grade for stock. During the melting process more laboratory tests were made to prove the accuracy of the alloy, and later in the day, after the metal was poured, other tests were made on the friction testing machine. Comparisons were made showing how in Imperial Genuine the tenacity of the tin and copper mixture combined with ductility render it best for high speed and special hard service.

At the conclusion of the Babbitt Metal discussion came one of the most interesting events of the Convention, when Mr. Fred Harris, Manager of the Winnipeg Branch, presented a gold watch and chain to Messrs. D. L. Scott and E. Parkin, who had been successful in the Harris Heavy Pressure Competition.

Another session was given over to Ingot Metals, so that salesmen would thoroughly understand what they were selling. Samples of Copper Ore, Zinc Ore, Lead Ore, Phosphor Tin, Antimony, and Phosphor Copper were thoroughly dealt with.

Metal conditions for 1917 were thoroughly reviewed and prospects for 1918 discussed, and the effect the war had upon the metal industry brought out some most interesting details.

Following came the manufacture of Solder of various grades. The salesmen, after going minutely into all the points of Solder, as to the quality, etc., were taken through the factory to see the manufacture of Bar Solder, Slab Solder, Wiping Solder, Wire Solder and Ribbon Solder.

Each day lunch was served at the Sunnyside Pavilion, and with the exception of this break, every day was full of business.

The salesmen were encouraged to give addresses and to illustrate the practical and interesting subjects the following might be noted:

Humanity in Business.....	E. Parkin.
Contracts.....	F. Harris.
What we are doing in Winnipeg.....	W. G. Garrett.
Sales assistance from the Office.....	M. Matthews.
Regular production of Business, Co-operation, Trade and its	
Prospects in Nova Scotia and New Brunswick, etc.	

Then followed a visit to the Lead Pipe Presses and Lead Pipe of all sizes from 1/4 inch to 12 inches in diameter was made.

Another session was taken up giving practical demonstration of making Brass, Bronze and Aluminum Castings in the Foundry.

One evening was given over to a Smoking Concert, held in the large Showroom at the Head Office, and at which, in addition to the salesmen, the whole office staff and the foremen of the various departments were invited. This was certainly a great success and the fun was fast and furious, and when the Convention Song was sung it made the rafters ring and was only second to the hearty way in which the National Anthem brought the Concert to a close.

At the conclusion of the convention votes of thanks were given to Mr. W. G. Harris, Sr., Mr. W. G. Harris, Jr., and Mr. H. C. Crow. Mr. Harris, Sr., in response, stated that even though it meant such a tremendous amount of thought and care to prepare and carry a Convention to such a successful issue, it was labour well worth while

when everyone took such intense interest in it, and he hoped that each one would go away feeling that a greater knowledge of the goods manufactured by the Canada Metal Company, Limited, had been gained, and that they would feel satisfied that the aim to give SERVICE and maintain the reputation for DEPENDABILITY was well backed up by the equipment in each department being the best that money and brains could produce.

Wooden ships are being built for the Imperial Munitions Board at Liverpool, St. John, Isle of Orleans, Cote St. Paul, Quebec, Three Rivers, Toronto, Fort William, Coquitlam, New Westminster, Vancouver, North Vancouver, and Victoria.

W. G. Harris, Jr., Vice-President.

JEFFREY "RELIANCE" MALLEABLE DRAG CHAIN

HAS THESE SPECIAL FEATURES THAT INSURE A MAXIMUM OF SERVICE

Links made of highest grade refined malleable iron—Assembled to correct pitch—Thoroughly tested before shipment.

Jeffrey "Reliance" and other types of Chains are a recognized standard for handling Saw Dust, Refuse, Logs, Lumber and other materials in Saw Mills and Wood-Working Plants.

← Long Bearing Surface of pin inside barrel of link.

← Wide Wearing Shoe—gives greater wearing surface, increasing life of chain.

← External Lug—Increases carrying capacity and protects pin head.

← Double Keyed Pin Head—prevents pin from turning. Pins made of high grade steel. →

Will Cut 75,000,000 Feet of Spruce

Announcement is made in Vancouver to the effect that the British-Canadian Lumber Corporation, whose affairs are now in the hands of a receiver for the bond-holders, has entered into an arrangement with the Masset Timber Company by which the former will log for high-grade spruce on the limits on Masset Inlet, adjacent to the Queen Charlotte group of islands, on the north coast. The spruce so obtained is to be used for aeroplane purposes, over which Major Austin Taylor, director of the aeronautical department of the Imperial Government, is in charge on the coast. It is estimated by those in a position to know that the cut of spruce of the special variety required will amount to about 75,000,000 feet. The contract will only call for the spruce on the Masset Company's tract, which comprises about one-third of the standing timber.

The Queen Charlotte spruce, especially that in the vicinity of Masset Inlet where the company's 280 limits are situated, is said to be the highest grade of aeroplane spruce in the province. Already several concerns are engaged in logging and in erecting mill machinery, but the activities to be carried on by the Masset Company will greatly extend the activity of the inlet, which has a shore line of 100 miles, with spruce within donkey-engine haul of tidewater.

Urges Much Wider Use of Wood

Clyde Leavitt, who is chief forester for the Commission of Conservation in Canada, recently issued a pamphlet entitled "Wood Fuel to Relieve the Coal Shortage in Canada." He points out that the consumption of coal can be considerably reduced throughout the Dominion by the wider use of wood fuel, of which Canada has enormous supplies. Mr. Leavitt further emphasizes the fact that serious doubt exists as to whether the coal situation in Eastern Canada can be improved materially during the continuance of the war, principally because there is such a shortage of labor, so inadequate a transportation system, and such a demand for coal in the United States for war purposes. In view of this he argues that prudence should obtain so that disastrous results will not ensue here from a shortage of the "black diamonds."

Alluding to the vigorous campaign now being waged in the United States for a conservation of coal he feels Canada cannot do less, and he particularly urges that an energetic campaign be carried on to educate the public in the use of wood, coupled with specific and well-organized effort on the part of provincial, city and municipal governments.

News Print Investigation Will Continue

It has been decreed by the sub-committee of the Cabinet at Ottawa, which had under consideration the recommendation of Commissioner R. A. Pringle that newsprint price in Canada should be \$2.85 per hundred from February 1st to May 1st, that the investigation shall proceed further, and an expert shall be called in to assist the Commissioner. The date set for the final completion of the hearing is April 28th, and wider powers will be accorded Mr. Pringle. His authority has been extended to probe, any contract, agreement, arrangement or combination which is designed to have the effect of increasing or fixing the price of newsprint or of restricting competition, or controlling manufacture, sale or supply to the detriment of the consumer. In the meantime, instead of the price of \$2.85 going into force, \$2.50 will be the quotation, which figure has prevailed for many months. This sum must be paid by the publishers to the companies direct, and the remaining 35 cents per hundred pounds (making up the \$2.85), must be paid into the credit of the controller of some chartered bank, which will be named by Commissioner Pringle as representing the government. When Mr. Pringle's final report is approved this money shall be refunded to the publishers or to the manufacturers or part to one and part to the other, as the case may be.

More Direct Routing of All Freight

The recent decision reached by the Canadian Railway War Board to remove the last vestige of the indirect routing of freight where this condition exists is welcome news to the lumber industry, with whom the problem of distribution has been a perplexing one for many months. It is announced that experts are completing the new routings for freight in Western Ontario. A car will then go by the shortest way, irrespective of what line it covers. This will mean the cancellation of certain tariffs and a quicker local service. In many cases connections between the railways will have to be built and this work will, it is reported, be proceeded with as soon as the frost is out of the ground.

The twenty-first annual convention of the National Hardwood Lumber Association will be held in Chicago on Thursday and Friday, June 20 and 21. The convention headquarters will be at the Congress Hotel.

"Living the out door life in comfort."

The Arctic Eiderdown Sleeping Robe

GUARANTEES PERFECT SATISFACTION—ALWAYS.

Of the thousands of these robes sold we have never had one returned, nor in any way condemned.

The Arctic Eiderdown Robe is absolutely wind and moisture proof. Frost cannot penetrate it. It is positively sanitary—the more sun and air it is given the more resilient and thicker it will become.

Hunters, Motorists, Woodsmen and Lumbermen should never be without one. It can be slept on, in or under.

Its weight is almost nil, while its advantages are many.

Send name and address for interesting booklet just issued giving full information.

EDGINGS

Ontario

The charter of the Cutler Bay Lumber Company, Ltd., has been cancelled.

The plant of the Peterboro Planing Mill Company, Peterboro, Ont., was badly damaged by fire recently. The loss is estimated at \$10,000.

As an example of the serious car situation at Ottawa one big lumbering firm exporting to the United States received one car for shipment in a period of two weeks.

Mr. Joseph Pelletier, for many years a resident of Ottawa, who in September last accepted a position with the Devon Pine Lumber Company, recently died suddenly at Chapleau, Ont. He is survived by his widow, two sons overseas, and five daughters.

The Rock Lake Lumber Company, incorporated in 1910 with a capital of \$100,000, was ordered wound up at Osgoode Hall, Toronto, on a petition of Mr. Thomas N. Dunn, a creditor for \$159,000. The court appointed Mr. F. C. Clarkson interim liquidator.

Ottawa lumber dealers and woodworking plants may enter into strong competition to secure whole or partial contracts in connection with the tenders for the big new government building, to be erected at the corner of O'Connor and Queen Streets. The building will be nine storeys high.

An amendment is being made to the Ontario Mining Act at the present session of the provincial legislature making it illegal for those staking out claims to take more than sufficient timber from the property than would be required in working the claim. Hitherto a good many claims have been staked out not for the purpose of mining, but to secure pulp wood, and it is the intention of the amendment to put a stop to this practice.

The Rainy Lake River Boom Corporation, incorporated under the laws of the State of Minnesota, has been authorized to carry on in the Province of Ontario the improvement of the Rainy Lake River from its mouth at the Lake of the Woods to the falls of the said river at the International Falls, and to carry on the businesses of booming, driving, protecting, safekeeping, and delivery of logs, timber, and forest products. The company's capital shall not be larger than \$55,000 to do business in the Province of Ontario.

By an order of the Supreme Court of British Columbia the Arrow Lakes Lumber Company is to be wound up, at the instance of the Lafayette-Lamb Lumber Company, which holds a judgment of \$2,294,000 against the Kootenay Company. The provisional liquidator is Mr. Murray, general manager of the Arrow Lakes Company. The Union Trust Company, of Toronto, which is the trustee for the debenture holders, has a claim for \$200,000, of which half is insecure. Evidence adduced in the court action was to the effect that the Lafayette Company is the holder of the stock of the Arrow Lakes concern.

Eastern Canada

Mr. John O'Brien, for 45 years connected with the Gilmour Company and 13 years employed by the E. B. Eddy Company, died recently at Hull, Que. He was 75 years of age, and is survived by a widow and three daughters.

Atlas Wooden Ware, Ltd., has been incorporated, with head office at Montreal, P.Q., and capital stock of \$50,000, to carry on business as manufacturers of and dealers in timber, wood, metal, etc. Among those interested are P. Saumur, E. Hally, A. R. W. Plimsoll, R. Bodeur, and A. Chouinard, all of Montreal.

Mr. John P. Mosher, buyer in Canada for the L. N. Godfrey Company, of Boston and New York, left on February 21 for Nova Scotia and New Brunswick, where he will be located for the next few weeks in the interests of his Boston connection, calling on the lumber mills, where he has an extensive acquaintance.

The Ticonderoga Pulp and Paper Company, a subsidiary of the Riordon Pulp and Paper Company, had a very prosperous year. The profits in 1916 amounted to \$881,426, and after deducting depreciation, bond interest, etc., \$576,112 is left. A dividend of 20 per cent. has been paid, and a sum of \$478,181 added to the surplus, this now amounting to \$1,480,626.

The Canadian S K F Company, 47 King Street West, Toronto, has established an office in Montreal, under the direction of Mr. Harold Brown, who will take care of the company's business in that territory and give service to users of S K F ball bearings. Mr. Brown was previously manager of J. Stone & Co., in the Transportation Building, Montreal, who handle the Stone Lighting System.

Owing to the increasing demand for building material, especially heavy timber, in West St. John, importation of carload lots of Douglas fir has begun, and already a considerable quantity of this heavy timber has been landed, after a long journey from the Pacific Coast. Shipbuilding and other new work has created a demand which will develop an important business in the handling of this class of wood goods. J. A. Gregory is the pioneer importer in West St. John.

The land damage suit of Spafford and Roy Wade vs. the Nashwaak Pulp

and Paper Company, of St. John, N.B., is one of the most noted that has ever come before the courts in New Brunswick, owing to the many matters involved. The suit was entered by owners of farm land on the Nashwaak River for damage done to their property during the stream-driving operations of the company. When the action is decided it will settle the rights of riparian owners and of lumbering companies, which have been in dispute for some time. Recently counsel for defendant company moved for appeal, and the court granted leave to enter and extended the time until ten days before the April sittings of the Appeal Division of the Supreme Court.

Western Canada

The West Lumber and Supply Company, Ltd., is opening a branch at Langham, Sask.

The Reliance Fuel, Timber, and Lumber Company, Ltd., has been incorporated, with head office at Winnipeg, Man.

The Timberland Lumber Company, Ltd., New Westminster, B.C., have filed plans for mills, wharf and approach, log dump, booming, holding, and sorting grounds, proposed to be built in the Fraser River.

R. P. Butchart, director of wooden shipbuilding for the Imperial Munitions Board in British Columbia, says he has no intimation of the British Government awarding contracts for forty 3,500-ton wooden vessels to be built at Victoria and at Vancouver.

The Queen Charlotte Spruce Company, Ltd., has been incorporated, with head office at Victoria, B.C., and capital stock of \$500,000, to carry on business as timber merchants, sawmill and pulp mill proprietors, and to manufacture and deal in lumber, timber, wood, sawlogs, etc.

The Frontier Lumber Company, Ltd., has been incorporated, with head office at Winnipeg, Man., and capital stock of \$50,000, to carry on a general timber, lumber, milling, fuel, and supply business. Among those interested are E. B. Eadie, R. Siderfin, and M. McNicol, all of the city of Winnipeg.

Overseas Loggers, Ltd., has been incorporated, with head office at Vancouver, B.C., and capital stock of \$100,000, to carry on in any part of the world the business of timber merchants, sawmill proprietors, wood pulp manufacturers, timber growers, to manufacture timber, cordwood, shingles, boxes, crates, etc.

The North Burnaby Lumber Company's new mill at Edmonds, B.C., has been completed and is now in operation. The mill has a daily capacity of some 12,000 feet and employs about 30 hands. The company has several months' work in view, and is starting on half a million dollar contract with the British Columbia Box Factory Company.

Sealed tenders are being received by the Minister of Lands for British Columbia until the 9th day of March, 1918, for the purchase of License X1273, to cut 2,705,000 feet of fir, spruce, balsam, pine, and cedar on an area adjoining S.T.L. 7526P, near Adams Lake, Kamloops District. Two years will be allowed for the removal of the timber.

The Sayward Logging Company, Ltd., has been incorporated, with head office at Vancouver, B.C., and capital stock of \$10,000, to carry on business as timber or lumber merchants, mill proprietors, and timber growers, to import, export, and deal in timber, lumber, and wood of all kinds, and to manufacture and deal in all articles in which timber or wood is used.

The Bendickson Logging Company, Ltd., has been incorporated, with head office at Vancouver, B.C., and capital stock of \$25,000, to acquire and take over as a going concern the business now carried on by Hans Bendickson & Co. The new company will carry on business as loggers, timber and lumber merchants, woodworkers, sawmill and shingle mill proprietors, etc.

Sealed tenders are being received by the Minister of Lands for British Columbia until the 15th day of April, 1918, for the purchase of License X1218, to cut 6,579,000 feet of cedar and fir on an area adjoining L. 2622, near Horse-shoe Lake, New Westminster District. Three years will be allowed for the removal of the timber. Further particulars may be obtained from the Chief Forester, Victoria, B.C.

The Nicola Pine Mills, Ltd., has been incorporated, with head office at Canford Mills, B.C., and capital stock of \$300,000, to purchase, acquire, and take over as a going concern the business now carried on by the Nicola Valley Pine Lumber Company at Canford Mills, and to carry on business as loggers, timber merchants, sawmill proprietors, etc., and to deal in sawlogs, timber, lumber, and wood of all kinds.

The Brooks & Bidlake Cedar Company have purchased all the cedar in the old "J" lease, owned by the Hastings Mill Company at Wolfson's Bay, B.C., for many years. Several large cribs will be built at once and operations started. The Lamb Creek runs into the territory, and will be used to run the bolts to salt water. Mr. George McKay, of Vancouver, has charge of the work. The timber covers a large area, and a camp will soon be located.

Carstens & Tarles, Inc., an extra-provincial company, has been registered under the "Companies Act," with a capital stock of \$300,000, and is authorized to carry on business in the Province of British Columbia. The head office of the company is in the Lowman Building, Seattle, Wash., and the provincial office is in the London Building, 626 Pender Street West, Vancouver, B.C. J. H. Lawson, at the same address, is attorney for the company. The company will manufacture and deal in lumber, logs, timber, shingles, and all other forms and kinds of lumber and timber whatsoever, or the products thereof.

Personal Paragraphs

Hon. George Gordon, of George Gordon & Co., Cache Bay, Ont., recently returned from the South. Mrs. Gordon and family will remain in Florida until the spring.

Mr. F. I. Ritchie has been reappointed manager of the lumber department of the Wayagamack Pulp and Paper Company, Three Rivers, Que., and Mr. H. Helin technical manager.

The many friends of Mr. Robert Smith, of John B. Smith & Sons, Ltd., 53 Strachan Avenue, Toronto, will sympathize with him in the death of his wife, who passed away on February 21.

Captain W. E. Schuster, Belleville, Ont., of the headquarters staff, Canadian Forestry Corps, London, Eng., has returned from overseas. He is the railway traffic officer and a member of the Technical Board of the Canadian Forestry Corps.

Mr. Ross A. Rastall, of R. A. Rastall & Co., 1072 Queen Street East, Toronto, has been appointed manager of the Canada Lumber Company, Weston, Ont., and entered upon his new duties recently. His son Reg. will continue as manager of the retail yards of R. A. Rastall & Co.

Mr. C. W. Wilkinson, of the Union Lumber Company, Toronto, and wife, and Mr. W. Gerard Power and wife, of St. Pacome, P.Q., left recently on an extended trip through the Southern States. Mr. Power was elected president of the Canadian Lumbermen's Association at the annual convention, held last month.

At a meeting of the Construction Association of Quebec, held February 20, Mr. O. Chalifour, president of O. Chalifour & Co., dealers and manufacturers of lumber, Quebec, was presented with a gold medal, awarded to this company for the best exhibit of lumber for construction at the last exposition at Quebec. Mr. Emile Morissette, one of the late presidents of the association, made the presentation.

Local and Transportation Committee Appointed

At a recent meeting of the executive of the Canadian Lumbermen's Association, held in Ottawa, a distinct step was taken in appointing local committees to deal with any home matters which may arise from time to time and to take action thereon and report final decision to the executive. Heretofore, it has been necessary when any local question of greater or less importance cropped up to call a general session of the executive. It has been felt for some time that such affairs could

be adequately looked after by a few representative men in each city, closer supervision exercised, and a lot of detail that has been passed on to the executive eliminated.

The local committees are as follows:

Montreal—A. H. Campbell, George W. Grier, W. T. Mason, and Alex. MacLaurin.

Toronto—W. C. Laidlaw, W. E. Bigwood, Duncan McLaren, A. E. Craig, A. E. Clark, and James G. Cane.

Ottawa—D. McLachlin (Arnprior), R. G. Cameron, Gordon C. Edwards, and W. M. Ross.

Another important matter was the appointment of a transportation committee to supervise all freight and traffic matters. This consists of A. C. Manbert, Toronto; W. T. Mason, Montreal, and D. G. Gilmour, Ottawa.

New Lumber Firm Opens Offices

Greig, Morris & Blair, a new concern in the lumber business, have opened offices at 502 McKinnon Building, Toronto; 512 Dominion Express Building, Montreal, and at Mobile, U.S.A. They are wholesale dealers in spruce, pine, and hardwoods. The partners were all formerly with the Seaman, Kent Company, Ltd. Mr. Greig is the president of the new firm, Mr. Morris, Southern manager, and Mr. Blair, Eastern manager.

Another Contract for Shell Boxes

The Lindsay Factories, Toronto, have been awarded the contract of supplying the Imperial Munitions Board with 60,000 shell boxes. The size is 4.5 inches, and deliveries will be made at the rate of 20,000 boxes a month. The firm have filled several previous orders for munition boxes. Other contracts will, it is understood, be given out in a few days.

Review of Hardwood Export Trade

The instructive article on "Many Restrictions on Hardwood Exports," which appeared on page 78 in the last edition of the "Canada Lumberman," showing how stocks in the United Kingdom were low and that Canada may be asked to help replenish them, was furnished the "Canada Lumberman" by E. M. Nicholson, of Montreal, and was an excellent summary of conditions.

Over a Century's Good Saw Making To Our Credit

R. HOE & CO.

504-530 Grand Street
NEW YORK CITY

Right around the world, wherever you find wood cutting saws in use, there you are almost certain to find the "Hoe" saws working and giving all round satisfaction. "Hoe" saws are famous for durability; they give longer and better service.

The "Hoe" Saw Catalogue is a worth-while booklet, brimful of information on saws, and sent free to you on request.

One of the most difficult and costly operations in sawmaking is the grinding of blades to taper. Disston Cross-cut Saws are ground uniform in thickness along the entire tooth-edge, gradually tapering thinner to the back. This prevents kerf binding. There is no sacrifice of weight, stiffness or elasticity by the Disston Method of Grinding.

This is one of the reasons why Disston Saws run easiest, cut fastest and last longest.

SELF PROPELLING LOG LOADER

This machine will propel itself up or down a special wide gauge track parallel to the main track or siding on which the train of empty cars is placed for loading. It will pick up the logs from the ground or pile, swing the boom and deposit the logs on the car, and thus load every car in the train, moving itself from car to car as the cars are loaded. With this machine it is not necessary to pull the whole train along a little at a time to bring each car in position in front of the Loader. The Loader goes to the car. Thus a machine powerful enough to load the logs is all that is required, instead of buying a machine powerful enough to move the train.

MARSH & HENTHORN, LTD. - Belleville, Ont.

GOODHUE BELTING

FACTORY TO YOUR MILL

TO the saw mill and woodworking industries we offer an unusually good belting value in our "Acme Waterproof." This belting is specially made from the best hides to run in wet places where only the best quality belt can "make good." If you require any belting you should enquire into the merits of "Goodhue Belts," then you will buy a "Goodhue."

According to the conditions under which the belt has to run, we recommend "Extra," "Standard" or "Acme Waterproof"—each brand the best quality, but each made for a different service

We have other "LITTLE DAVID" time-savers for wooden ship builders, such as Drills, Grinders, Saws, Drift Bolt Drivers, etc.

Write for information on Air Compressors, Air Hoists, and the complete equipment necessary to do your work, the "LITTLE DAVID" way.

Let "Little David" Do Your Work

In wooden shipbuilding, speed counts, if it counts anywhere, at the present day. There are many operations in this line of work which can be done to the greatest advantage by compressed air.

The "LITTLE DAVID" Way

of wood boring is a good instance of quick, efficient work by compressed air.

The "LITTLE DAVID" Wood Borer shown in the cut is light, speedy and powerful. This tool is made in three sizes for holes from 1 inch to 4 inches diameter. Low repair cost and economy of air are two of its strong points.

Let us send you Bulletin 8507. It will interest you.

Your Bit

You have probably invested in Victory Bonds, and contributed to the Red Cross. Perhaps you are economizing in many ways also; but there is still another way to help—save power.

Chapman Double Ball Bearings

save 20 per cent of power by eliminating friction. If you are wasting power in transmission you are wasting coal—one of the articles the government requests us to conserve.

It is not necessary to shut down your plant to install Chapman Bearings. They are interchangeable with self oiling bearings of the same shaft size, and power is not the only thing they save.

Let us tell you more about them

Chapman Double Ball Bearing Co., Ltd.

"Has Never Failed"

A Specially-Band Resaw Not a Side Line

Kenova, W. Va.
Oct. 1, 1917

Gentlemen:—

We are very much pleased to report that the Standard Perfected Band Resaw which we bought of you a year ago is giving us perfect satisfaction. *It has never failed* us once, but it is on the job and ready for business all the time,

Standard Perfected Band Resaw

and the more you give it the better it seems to like it.

Respectfully,

Kenova Box Co.

ADJUSTABLE SAFETY CAR-STAKE EQUIPMENT

(SCHMITZ PATENT)

Mr. Logger, Attention!

We have the ONLY device that removes ALL danger and difficulty in moving your logs from camp to mill on cars, trucks or sleighs.

No balks, breakdowns or dislocation of parts—IT WORKS ALWAYS. Though still new, it is thoroughly tried and tested, and gives perfect satisfaction to all who use it. Nothing like it for speeding up production and reducing expenses.

It will save you TEN times its cost in wages, renewal of stakes, avoidance of accidents, and vexatious delays.

If you don't use stakes on your cars, you CAN use them with this equipment; you need it on your cars right now, and you will WANT it as soon as you find out what it will do for you.

Send for illustrated Circular, with testimonials, and let us convince you of the truth of these claims. Address

INTERNATIONAL LOG BUNK & EQUIPMENT CO., 2661 W. 57th Street Seattle, Wash.

The Carriage You Are Looking For

Our No. 1 Size

CARRIAGE.—Has three head blocks, as shown in cut, usually set 9 and 6 feet apart, will be placed any distance apart to suit purchaser. Knees open 38 in. from saw, and is fitted with Knight or Peel dogs, as desired. Taper movement on each knee. 1 15-16 in. steel set bar with steel pinions and coil spring receder, and friction lever brake for stopping knees where required. Timbers are 5 x 6 in., or heavier if desired, well bolted and braced. Diameter of truck wheel, 12 in. Axles 1 3/4 in. diameter, and extend clear across carriage, are furnished with self-oiling bearings. Front block is fitted with timber rule, placed as desired; 54 feet of V and flat track furnished with each carriage.

SET WORKS.—As shown in cut, is made up of ratchet wheel 12 in. diameter, 4 in. face, with set lever carrying 7 steel pawls of varying lengths; also, same number of check pawls set in quadrant. Both sets of pawls are disengaged from either side of carriage when required to recede knees. This is a positive set, without lost motion.

FEED WORKS.—As shown in cut, consists of 16 x 12 in. drum, with spur gear keyed to shaft. Pinion or friction shaft in saw frame engages with this gear. Cable takes two or three turns around drum, and is passed around end sheaves and attached to carriage. We also furnish 26 in. drum with internal gear in place of 16 in. drum when desired.

ONTARIO

Canada's Banner Province

Ontario's timber production last year
valued at \$26,774,937 or 40% of Canada's
total output.

Pine production,	905,442,000 ft. B.M.
Pulpwood,	246,282 cords.
Railway Ties,	5,704,459.

Ontario's woodworking industries, using 34
different kinds of wood, provide a ready
market for the lumberman. Eighty-two per
cent. of lumber used in Ontario's industries
purchased within the Province.

Ontario's vast resources offer unsurpassed opportunities to the lumberman.

For maps and full information regarding Ontario, apply to

HON. G. HOWARD FERGUSON,
Minister of Lands, Forests and Mines.

Wholesale Lumber

We buy extensively to be shipped in car and cargo lots CANADIAN Lumber of all kinds including—

SPRUCE, PINE, HEMLOCK

ALSO HARDWOODS

Douglas Fir and Cedar
—Lumber—

Red and White Cedar Shingles, Laths, Etc.

We handle Canadian and New England SPRUCE in all sizes and grades

We can ship from some of the Largest Mills in America Quantities of

MAPLE, OAK and BIRCH FLOORING

Short and Long Leaf Southern Pine

60 Congress St., BOSTON, MASS.

7 EAST 42nd ST., NEW YORK CITY, N. Y.

The Wear is Always There

Long Wear—that's one of the important features of "ASBESTOL" Gloves and Mittens that has meant so much to workers in lumber camps everywhere.

"ASBESTOL" is the favorite glove of every Lumber Jack who wants perfect hand protection.

Always insist upon having "ASBESTOL." Don't take any other kind because none other will serve you like "ASBESTOL."

"ASBESTOL" Gloves and Mittens resist snow and water. They are warm and comfortable and will not crack or harden.

Dunlop "Gibraltar" RedSpecial" Belting

Abnormal Friction Pull

vs. Elasticity of Friction

BETWEEN every ply of specially-selected, heavy Cotton Duck in Dunlop "Gibraltar RedSpecial" Belting is a layer of pure Rubber which, through a Dunlop calendering process, so permeates the fabric that it binds the several plies into one integral piece.

Some belt manufacturers offer to sell their product on the basis of "Heavy-Poundage in a Friction-Pull" Test. To obtain the latter result it is not necessary to secure such an expensive Rubber Friction as is used in "Gibraltar RedSpecial." This fact alone ought to be a pretty good gauge of the value of the "friction-pull" test.

In buying "Gibraltar RedSpecial" you get the advantage of years of careful laboratory work on our part with this result: The friction is of that "just-right" elastic quality which allows for the give and take necessary in rounding the pulleys; hence the reason "Gibraltar RedSpecial" is known for maximum Power, Speed and Service.

Note the Short Grain Rubber Friction

This Belt Section illustrates a Heavy "Poundage-Pull" Friction. To secure this result the Friction Grain is short and stiff. Elasticity and Flexibility have been sacrificed to secure such a result.

Note the Long Grain Rubber Friction

Dunlop "GIBRALTAR REDSPECIAL" has a Friction of Special Dunlop Rubber that retains its life indefinitely. "Note the long grain Rubber Friction," as illustrated. Elasticity has not been sacrificed for Abnormal Friction Pull.

UNLIMITED capacity for service is an intrinsic quality with Dunlop "Gibraltar RedSpecial" Belting. The success of nearly a quarter of a century in the manufacture of Rubber Products is built into Gibraltar. The original Made-in-Canada Red Rubber, Frictioned Surface Belting, "Gibraltar RedSpecial" has stood the infallible test of time in turning the wheels of industry in a multitude of Canadian plants from the Atlantic to the Pacific.

The Dunlop Unreserved Guarantee

If you have a difficult drive anywhere in your factory drop a line to our Head Office, or to our nearest branch, and we will send a man experienced in belt engineering to consider your requirements. If it is an instance where the "Gibraltar" Belting may be suitably employed we will recommend its use; and we will stand behind our recommendation with the fullest guarantee ever issued by a firm producing rubber products.

LEATHER BELTING

Tanned by us for belting use

GRATON
AND
KNIGHT

Coal---Power---Belts---Production

YOU invest your money in coal to get power — **POWER**—the basis of production. If power leaks out in transmission, it **never becomes production.**

That is why selection of the belting that will transmit the greatest amount of power is a vital matter. It does not receive the careful study which it demands.

First: Use **leather** belting—the material that guarantees least power leakage; that is standard for main drives; that stands the mauling of shifters; that can be easily spliced and repaired; that when partly worn can be cut down for narrower pulleys; that has greatest elasticity and pulley-grip.

Second: Don't select belting on specification. Select it on scientific adaptation to the **work to be done.** Right here is the reason for the superiority of

Graton & Knight Standardized Series Leather Belting.

Twenty mills with practically identical needs often specify twenty varied types of belting. And yet the requirements of power transmission fall into a relatively small number of classifications. For each of those classes there is a Graton & Knight Standardized Belt. Long study and experience fixed that standard, and we keep it there—rigidly.

It will work an economy for you if you will let us specify the grade of belt for each pulley in your plant. Then, when you buy belting, call for "Graton & Knight — Brand or equal." This doesn't commit you to buying our belting. It puts your buying squarely and permanently on the only sound basis—the **work to be done.**

HARRIS HEAVY PRESSURE

THE ARISTOCRAT OF BABBITT METALS

SHIVES LUMBER CO., LTD., Campbellton, N.B.,
Canada

Messrs. The Canada Metal Co., Ltd.,
Toronto.

Dear Sirs:

Replying to your inquiry regarding our experience with Harris Heavy Pressure Metal, would say we have been using this metal for about five years in main bearings and cranks of Wickes' gangs and steam engines, also edgers, etc., in place of more expensive metals that we formerly used for these bearings.

We are pleased to be able to say that the Harris Heavy Pressure has in every case given us good satisfaction, being a nice metal to pour without shrinking or cracking, and wearing well. So long as this metal retains its present standard of excellence we will have no hesitation in using it for the most severe conditions we have for babbitt metal.

Yours
JOHN M. MACLEAN,
Superintendent.

Chemicals

A Profitable Industry For Lumbermen

There is a handsome return on any investment in the chemical industry—particularly in the manufacture of those chemicals which we heretofore imported from Germany.

The industry is particularly attractive to lumbermen as many valuable chemicals are obtainable from wood waste by our complete wood distillation and chemical plant.

Your New Saw Mill

Will give you the best service and the longest service with the least expense for upkeep—If it is a Fisher & Davis Mill.

Catalog of Saw Mills, Edgers, Planers, etc., is yours for the asking. Ask to-day!

FISHER & DAVIS MFG. CO. St. Louis, Mo.

Don't Blame the

FIRE BRICK

if it fails to give satisfaction. More likely than not you have been using the wrong kind for your particular purpose. A firebrick intended for use in a small hand-fired boiler may not give the same result if used under high pressure boiler with mechanical stoker.

So when sending us your enquiries be sure to specify for what purpose these brick are to be used.

You are sure then of a high quality brick, that is absolutely the best for your purpose.

We Manufacture the Following Well Known Brands

"Elkco Special," "Elk Steel,"
"St. Marys," "Keystone" and "Rotex"

Catalogue is yours for the asking.

ATKINS

ALWAYS AHEAD!

The most advanced improvements in Saw manufacture have placed us far ahead in the manufacture of Saws for all uses.

Our Band and Circular Saws are worthy examples. They cut more timber—do it with less power and require less repair to be kept in perfect condition.

Economy in mill operation has proved their value. Put them through competitive tests with other Saws.

The Sterling quality of

Atkins Sterling Steel Saws

will overcome your difficulties.

All above Locomotives in first class operating condition and for immediate shipment.

Write us for fuller specifications and prices. These are the lowest offerings in the market to-day.

BURNS & ROBERTS

Main 1997

301 Bank of Hamilton Bldg., TORONTO

Patented Nov. 29 '92; July 19 '10.

Grooves cut with Huther Bros. Dano Heads.

Fits Any Saw Mandrel

A Huther Bros. Dado Head consists of two outside cutters and enough inside cutters to make the required cut. This Head will cut perfect grooves, with or across grain, any width. It is an easy Head to keep in perfect condition, has a simple quick adjustment, and may be enlarged any time after purchase. Sent on approval and if not satisfactory return at our expense.

Write for New Illustrated Catalog.

1103 University Ave.
ROCHESTER, N. Y.

LOGGING LOCOMOTIVES

Locomotives on trunk line railroads have the advantage of the best facilities for inspection and repairs.

Logging locomotives face different conditions. They must work day after day in the hardest service, and often in localities where repairs cannot be made without great inconvenience. That is why we build our logging locomotives from interchangeable stock parts. With this

system every part must fit every other locomotive of the same size and design, and long delays waiting for duplicate parts are avoided. Interchangeable parts kept on hand at our Works for prompt shipment

MONTREAL LOCOMOTIVE WORKS, LIMITED,

DOMINION EXPRESS BUILDING,

MONTREAL, CANADA.

CLIMAX Improved Geared LOCOMOTIVES FOR WOOD AND IRON RAILS

A 62-ton Climax Locomotive Designed Especially for Heavy Logging Work.

Climax Locomotives are successfully operated on steep grades and sharp curves. Any weight or gauge. Locomotives in stock for immediate shipment. Get Catalog "H."

STEAM FEEDS

Our Direct Acting Feeds are built in any desired size

This mark on your saw-mill machinery is an indication that your lumber manufacturing equipment is the best and most economical money can buy.

The illustration gives a good general idea of our direct acting, or shot gun, steam feed, which we build in the following sizes: 8 in., 10 in., 11 in., 12 in. and 14 in. bore.

The cylinders are made in 6-ft. sections, and are bored to exact diameter. The flanges on cylinders are faced perfectly true, and finished to templets, so that each section is interchangeable. The flanges are also turned on the outside, which is a great convenience for levelling or lining the feed when placing same in mill. For each end of the completed cylinder we furnish short pipes, which are long enough to reach the valves and permit the valve connections and steam feed to nicely clear the floor timbers.

The front cylinder head is our improved pattern.

The piston rod is made from double thickness, seamless steel tubing, of extra large diameter. It is made in two or more sections, according to length of feed.

Our illustrated catalogue contains full details.

A copy will be sent you on request

**We have the following on hand
ready for shipment**

one Portable Saw Mill outfit with Right hand Saw Frame and Carriage—set of track timbers, also the following items:
No. 1 Log Jack with foot wheel and idlers.

No. 7 Log Jack with foot wheel and idlers.

10 inch by 36 ft. Steam Feed.

10 inch by 42 ft. Steam Feed—Either feed can be furnished with vertical or horizontal valves. Double acting set works in No. 1, 2 and 3 sizes.

We have one second hand plain slide valve engine, right hand, side crank, 9 x 13, suitable for a small saw mill plant.

Write at once for information regarding the above
or any other you may need

Catalogue on request.

HEAVY DUTY ENGINES

Engines of the Side Crank style are built by us with single cylinder, with capacities up to 300 H.P., or with twin cylinders up to 700 H.P. These are especially usable where steam economy is not the first consideration, but where a slow steady power is required. In saw mills, pulp mills and similar industrial plants they can be used to good advantage.

We manufacture a complete line of Steam Plant Accessories.

Waterous

BRANTFORD, ONTARIO, CANADA

"FROST KING" METAL

Our thirty-five years experience in metal mixing enables us to place on the market a babbitt that we believe to be absolutely perfect. For high speed machinery and engine work it is without an equal. It is specially designed for saw-mills, planing mills, threshing engines, traction engines, pumps, rolling mills, pulp machinery, and all classes of stationary engines. It is a high grade metal made of the very best selected stock, and carefully compounded.

If your dealer does not stock FROST KING send us a money order for your requirements. Price 30c per lb., Fort William and East; West of Fort William 35c per lb., delivered nearest railway station; packed in 30 lb. and 60 lb. boxes.

For extra duty, such as over-hanging saws, our TROJAN BABBITT will stand where all other metals will fail. Price, Fort William and East, 70c per lb.; West of Fort William, 75c, delivered to your nearest railway station; packed in 30 lb. and 60 lb. boxes.

\$5,000,000.00
worth of mixed metal
sold annually.

HOYT METAL CO., Toronto, Canada

Have factory and office at Eastern Avenue and Lewis Street, Toronto, Canada

Factories also at:—

New York, N. Y.

London, Eng.

St. Louis, Mo.

**Not altogether what we
say but what users say**

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs,
in calm weather, 30,000 in a head wind.

1—Waterous double edger for 20-inch saws, lever shifter.
1—Payette double edger for 18-in. saws, lever shifter.
48—live rolls about 8 ft. long by 10 in. dia.; extra heavy, sprocket drive.
20—High cars with roller tops, 24 in. heavy wheels on 3 in. axles, standard gauge.
1—Merston 4 saw gang resaw, takes squared cants or just one face, ideal machine to cut small logs and centres of large after good has been taken off.
1—Payette picket machine, made specially for shade roller stock, will feed pieces 16 in. long, also sorting table with chain top.
1—Rogers Iron Works circular resaw for making box lumber from slabs; fool-proof machine.
1—Payette edger for box and short stock.
1—Rogers twin circular or tie maker.
1—Payette lath bolter and lath machine.
1—Pair lath trimmers.
1—Picket trimmer (bunch trim).
Conveyor drives and chains.
Pulleys, gears, heavy line shafting and countershafting with bearings.
Send us your requirements.
We have a large stock of double and triple leather belting in widths from 10 in. to 46 in.
1—Doz. concave carborundum wheels, 12 x 3/4 x 3/8, 365K, for band saw grinding.

Power House Equipment

2—Return Tubular Boilers, Polson make, 60 x 16 ft., Dutch oven settings.
1—Return Tubular Boiler, Goldie & McCulloch make; 54 x 16 ft.
Breeching and smoke stack for above boilers, 50 in. dia., newly painted, 600 ft. new 1/2-in. guy and plate for brick pier.
1—Northey boiler feed pump, outside packed, 8 in. x 5 in. x 12 in., for 3 in. suction pipe.
1—Pair Polson "Brown" type engines, coupled on quarters, 22 in. x 50 in., with 16 ft. x 48 in. belt, balance wheel. Excellent engines.
1—Pair American feed water heaters for above engines; 10 in., copper coils.

Filing Equipment

1—Waterous band saw grinder for 6 in. saws.
1—Baldwin retoucher for band saws.
1—Wm. Hamilton band saw shear, 12".
2—Reversible saw levelling blocks.
2—Chilled band saw anvils.
Hanchet band saw swages; Crescent circular saw swages; shapers and dressers.

Yard Equipment

Rails and frogs for yard.
Booms and boom chains, 1/2, 3/4 & 1.
Winches and other mill supplies.
Small shunting locomotive.
Double carts and waggons.
Prompt shipments and bargains for quick sale. Will send all particulars and prices on application.

Original "Dunbar" Machines

We are the original and the only makers of "Dunbar" Shingle Machines, Lath Machines, Clapboard Machines, Steam and Gasoline Logging Engines. Each is the best for its particular work. Are you using the best?

Lath Machine

From our many years of experience we evolved this "Dunbar" Original Lath Machine. Every improvement that could be suggested, every time-tested idea for the betterment of product and for greater speed, has been incorporated in this machine. We believe it has no equal, and there are a great number of mill men throughout Canada who share this belief with us. Carefully constructed of high grade materials and designed to work steadily under the hardest conditions.

Steam and Gasoline Logging Engines

Conditions in Canada necessitate an engine that will stand any amount of strain and hard work in the lumber industry. With this idea in mind we have brought out the "Dunbar" engines perhaps a little stronger than is really needed. They do their work easily and willingly, and stand a great amount of hard usage. Built entirely in Canada for the Canadian lumber trade.

Clapboard Machine

You will need no excuse for the quality of your product if you use the original "Dunbar" Clapboard Machine. Expert in every detail. This machine will give you the very best service under most trying conditions. It will turn out work without delays. It will need practically no repairs and will increase your output. We cannot recommend it too highly because it is giving this very service to lumbermen in all parts of this country.

Send for catalogues of any or all of these machines.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

Vol. 38

Toronto, March 15, 1918

No. 6

The Organization Movement is Bearing Fruit

The organization arrangements which were recently carried out in connection with the retail and wholesale lumber trade in Ontario, have made most satisfactory progress, and the practical benefits already manifested have justified the wisdom of the movement. The membership of both the retail and wholesale bodies is growing rapidly, and those who evidenced a disposition to hang back at first, are now coming into the fold. The retail organization has already completed the formation of five district bodies covering all parts of the province, officers have been elected and matters of vital interest discussed with a view to concerted action.

The interest of each of the groups is mutual and the cumulative effect as represented by the central body is witnessed in the spirit of co-operation manifested on every side. Thus many members share in the work and responsibility and general interest is sustained. The problems peculiar to each section of the province can be weighed and action taken, while to the larger affairs more direct attention can be given. Thus the work will be unceasing and not merely resolve itself, as is the case with too many organizations, in the simple calling of annual conventions, listening to a few set speeches, passing some resolutions and then everything lapse into a quiescent state until the date for the next annual gathering rolls around.

Some of the questions which have already been discussed by the district groups, embrace the cost of doing business, the proper figuring of profits, proposed amendments to the Mechanics' Lien Act of Ontario and the operation of the Workmen's Compensation. There are others to be taken up, such as transportation, cost accounting, advertising, insurance and training course service, all of which will be reached in time.

That the interest of the wholesalers and retailers is mutual and that no spirit of antagonism and distrust prevails, is shown in the fact that recently a conference of the travellers of the wholesale firms was held. They were requested by the various concerns which they re-

present to do all in their power in enlisting the interest and attention of retail lumber merchants in becoming identified with the retail association. All the representatives expressed their willingness to do everything in their calls to further the movement. Travellers are good boosters. They are the harbingers of trade conditions, the human barometers of business life, and when they lend their assistance and support to any movement, it is bound to forge ahead. From the very nature of their calling they are practical organizers and creators of enthusiasm. Forming the link between the wholesale and retail ranks, they recognize that one body cannot exist without the other and the welfare and uplift of both is closely interwoven.

That there is no conflict of interest between the two associations, and that no selfish motives or jealousy intervenes is demonstrated by the fact that the secretarial and other duties are being carried on by the same officers satisfactorily and efficiently. Partial time is being given to each body and the mutual arrangement is expected to go on with most gratifying results. Thus co-operative effort in dealing with trade problems that are too large for individual handling, has justified the existence of the organization movement. Like the current of a strong stream, the associations should gather strength and power as they flow in channels of well directed endeavor. The travellers of the wholesale firms may be expected to do their part and their influence is such as to ensure increasing success and usefulness for the union and strength of the retail ranks.

Publicity Plans for the Retail Lumberman

The late William Ewart Gladstone once said the only institution that could make money without advertising was the mint. Apparently many retail lumbermen do not agree with this observation, for a glance through half a hundred or more daily and weekly papers, reveals the fact that only half a dozen members of the trade carried anything in the shape of printed announcements. Even these advertisements were indifferently displayed and looked as if they had been standing in type for several weeks, unchanged. Such a state of affairs should not prevail, especially at the commencement of the spring building season, when, by a little attention and effort, much might be done in the way of publicity to encourage building, repairs and alterations. The reason that more retail lumber dealers do not carry space in their local papers, is probably because they imagine that they would reap but meagre benefit from the expenditure, owing to the fact that they handle only staple products, and, if people want anything in their particular line, they will come to them in any event.

There are other reasons, no doubt, and among them are, that the dealer does not know how to write a concise, well displayed advertisement, or, at least, has never given the matter much thought. He can settle himself down to the task and local publishers have not cultivated the building field as actively as they should. If any retailer hesitates in undertaking an expenditure for advertising, he can have many of the apparent difficulties brushed aside if he will confer with the newspaper proprietor in his town, who will gladly render him valuable help and advice. If the local publisher is alive and progressive, he will even aid in the preparation of the copy and work along mutual lines.

There is no mystery regarding advertising, and no special ability required to tell in a few, plain words, under an attractive and appropriate heading, with the matter well arranged, about having everything in the yard for the home, from the foundation to the roof, and that you will be pleased to discuss building problems and offer any suggestions, without the least obligation on the part of the prospective customer.

A few suggestions along this line may not be unwelcome. See that your announcement is changed frequently, that whatever space you decide upon to use is not overcrowded, and that only one series of type is employed and a neat border selected. Do not have half a dozen kinds of letters used in the set-up of your advertisement. Take up some special point in each announcement, and emphasize it. One day it may be your splendid and admirably assorted stock of building materials, another day your exceptional service, or your quick delivery, the reasonableness of your prices, the quality of your merchandise,

your experience in building operations, how you can furnish from one board to a car load, and no undertaking is too small to receive prompt and efficient attention.

There is no end of the ways by which the retail lumber dealer can find business through the medium of intelligently directed publicity if he really wants to get it. One authority points out that a leading magazine recently contained a description of a modern dwelling which had been purchased from a leading mail order house. There was a beautifully colored illustration and the statement made that Mr. S— had paid so much for the residence and that he had saved from twenty-five to fifty per cent. asked by all local dealers. The medium had a large number of readers in the town, and yet no local dealer had made any attempt whatever to counteract the implication that his prices were higher than the mail order quotations. It is a well-known fact that all mail order houses scan the local press, and, when they find the merchants in certain lines are not using the columns to any extent to tell the people of that district what they have, what they can do and what they present in the way of selection, variety and service, the mail order concerns immediately get busy with catalogues, booklets and other printed literature and thus conduct a campaign of education that often results in trade flowing in their direction.

There is no valid reason why the retail lumberman should not advertise as freely and as attractively as the grocer, the shoe merchant, the butcher, or the dry goods houses. He can point out that he has the materials and can give the service, that he has been studying building requirements all his life, and can assist the people with facts and figures in specifications, plans and estimates. He can explain to them just what they require and assist them materially in solving their construction or repair problems.

Several Amendments Desired in Lien Act

The operation of the Mechanics' Lien Act of Ontario has for some time been a source of dissatisfaction among builders and supply men. The measure is so full of loopholes and so much on the side of the owner of a house that the possibilities for deception and non-payment of obligations are quite pronounced. The proposal to have this Act amended is now engaging the attention of the district bodies of the Ontario Retail Lumber Dealers' Association, who feel that several new features should be incorporated in this piece of legislation. The men who supply material or labor have not anything like the protection they should enjoy, and it is with the purpose of correcting these and other defects that the present agitation is being carried on. Of course, any such attempt may be opposed by a few architects, shrewd contractors and speculative builders, as from their standpoint the Lien Act is almost ideal in its character and stipulations.

The Ontario Act at present provides that an owner shall pay to the contractor as the building progresses 80 per cent. of the amount certified to by the architect as having been earned, and that he shall retain 20 per cent. of this amount and whatever "extras" there are to satisfy the claims for materials and labor which may remain unpaid. Thus the owner is thoroughly protected if he complies with the requirements of the Act and is practically immune from suit. The chief weaknesses lie in that so many avenues are opened up for doing material men and labor out of their just reward. So long as a wily contractor can get away with 80 per cent. of what is due him he has "cashed in" on his undertaking to a large extent and need have no cause to regret if things turn out rather disastrously for those who have ministered to him in the matter of labor or supplies. In the meantime the speculative or dishonest contractor has got out from under; he may not be worth a cent, and therefore, mechanics or supply men cannot collect their hard earned bills. The owner is the one to whom the dissatisfied persons should look for honoring their claims, but he, too, is exempt except for the small amount of 20 per cent. which, in consideration of, say, few or no bills having been settled by the contractor, is a mere bagatelle. It is desired that the law should be more uniform in practice, simple in operation and clearer on certain points frequently in dispute. At present the measure favors no one except the indifferent or designing contractor. It does not put

the business of building on a sound sure basis, but leaves ample scope for speculation and even fraud, while the material man and the laborer are at the mercy of anyone who is able to secure credit.

The object of the proposed amendment is to make the owner entirely responsible and thus place the responsibility wherever it belongs and safeguard the parties whose interests should be protected. One amendment suggested is that when a payment becomes due to a contractor, the owner shall require an affidavit from the contractor showing all the names of unpaid laborers and the amounts due to them and all the names of material men and the sums owing to them, accompanied by proper certificates. When an owner has received these affidavits he must pay the contractor what is due, making payments to the sub-contractors, material men and laborers direct, and not to the chief contractor. What is left after these claims are satisfied can be handed over to the chief contractor unless notices have been filed with the owner showing that the amounts due do not coincide with those in the affidavit. This is a wise precaution and offers little latitude for duplicity on the part of any persons connected with the carrying out of the erection of a building. Ohio, Wisconsin and other states, have sound progressive legislation for the many important lines of industry and trade and in the amendments which it is sought to have adopted by the Ontario Legislature during the present session, several of these salient features may be embodied.

The Development of the Home Building Idea

During the past few weeks building prospects in Canada have shown some improvement, and it is expected that with the advent of spring more operations will be carried on than appeared on the surface some time ago. The demand for portable houses is increasing all the while and much attention will be directed to this phase of the business. Purely speculative building, the mushroom growth development, has, of course, been eliminated by the high values of labor and materials at the present time, and the fact that few transactions are going on in the buying and selling of houses for mere money-making purposes. All persons buying dwellings at this particular period are doing so in order to have a home, and not a few builders are planning to erect numerous dwellings with the object of disposing of them to as good advantage as possible.

Reports from various parts of the Dominion during the past month show that considerable gains in the number of building permits over the corresponding period of last year have been made. The permits issued in 35 cities reached in January over \$1,500,000. A recent census in the United States shows that 45.8 per cent. of the homes are owned and 54.2 per cent. are rented. Many lumber associations, builders and contractors are conducting aggressive and enterprising campaigns along the line of urging the people to erect their own homes. The arguments put forth are strong and convincing, being to the effect that a citizen who has property in his own name and right is under all circumstances a more aggressive, contented and influential member of the community than one who merely rents a habitation. The back-to-the-land movement where every resident can have his own vine and fig tree has also resulted in a general desire to erect dwellings and give those who engage in gardening, truck farming or other outdoor work, a more substantial stake in the community. The sub-division mania, the suburban property craze has to a large extent collapsed by reason of the war, the tightness of the money market, high taxes and bed rock values. In its trend comes something of a more solid and deep rooted character. The ownership of a home and real estate of greater or less magnitude where the possessor can and does do his bit in the great productive campaign of which so much is heard, affords him a special source of satisfaction in possessing a permanent abode raises his status as a citizen and makes him feel that his concern in the weal and upbuilding of the community is active and vital. The building of homes creates public spirit and with a proper conception of public duty existing in any centre that place becomes not only a very desirable one in which to live and do business, but also from an aesthetic and picturesque standpoint.

Credits—Their Cause, Effect and Cure

Many Concerns Place Too Much Consideration on Quantity Rather Than Quality of Business—
The Necessity of Co-operation and Bringing Delinquents to Time

By H. A. L. Swan, Sec.-Treas. Ottawa Lumbermen's Credit Bureau

H. A. L. Swan, Sec.-Treas. of the Ottawa Lumbermen's Credit Bureau.

In discussing the question of minimizing the loss through bad credits, I do not know of any phrase more appropriate than that "Credit Systems will return you nothing unless you set yourselves up to be their Master." What I mean is, that unless your Credit System is kept well in hand by those who are to make use of it, it will serve you no good.

The real trouble appears to me to be, that too many of our business men mistake "volume of business" for "good business," and there are some men who actually neglect their credits to go after volume. There is no doubt but that we all like to see our business swell, but I do not think that it should be built up without due regard for sound credit judgment.

I often wonder if all of our business men know that there is a

class of people who look upon substantial business concerns as sorts of philanthropists. I have actually had men come into my office in this city, after I have pressed them pretty hard for payment of an old account, and say that such and such a lumberman is wealthy, and does not need the \$25 or \$50 or \$100; simply because it had been allowed to stand on the books longer than it should. And right here let me say that ultimately all commercial mistakes and embarrassments result from people expecting to get goods without paying for them. It is a sad fact that merchants have in the past, and are today, encouraging this system of doing business.

I maintain that the buying public have been badly brought up, when they say "Ideal," with regard to Messrs. So-and-So, because I can pay them when I feel like it." I say that this axiom should be reversed, whereby Mr. Purchaser should state "I deal with Messrs. So-and-So as I get my goods just a little cheaper because I have to pay cash."

Why the Credit System Exists

Let us reason with ourselves why the credit system exists at all. I think you will agree with me that when times are good business men buy heavily. They do this because salaried men and laboring men have money and are purchasing accordingly, and it is a peculiar fact that when money is plentiful credit is most extensive. This is another condition of affairs which should, in my opinion, be reversed.

It has really come to a state of affairs where no business man ever pays cash unless his credit is bad. He buys on time, and this same privilege is again extended by the retail merchant to the consumer, who, when he has a steady position, buys. He buys for cash, and thinking his income secure, he buys more than he has the money to pay for. In other words, he trades on his credit; and mind you, under our present credit system he is encouraged to do this, because, as previously stated, the retailer has in mind that ridiculous idea of "volume."

The more the artisan buys the more he wants, and, unfortunately, the business man is every ready to extend credit. I presume it is because he is more concerned about getting his pay. During good times any good sober industrious man with a position can obtain credit, and it is a proven fact that he usually buys more than he can conveniently handle; and, in consequence, during periods of heavy credits, the merchant has thousands of bills. Needless to say, a very serious loss occurs through selling goods during periods of prosperity whereby there is neglect in collecting accounts closely until the hard times have arrived. These bills must necessarily accumulate from day to day, whereas, with a system of "credit-advice-in-advance-of-sales," this loss would be eliminated. Now let us see if this is not a serious matter.

The merchant finds that, after a certain period of prosperity, the money market imperceptibly tightens, and little by little reports are heard of business suspensions. These failures increase in volume and importance to the extent of the hard times wave. Business men accus-

tomed to discounting their bills, find it difficult to get the money with which to do so. The less substantial firms, formerly in the habit of paying in 30, 60 and 90 days, find themselves unable to meet their payments promptly. The net result in which the retailer finds himself is that he has failed in the one important item in his business career, and which after all, is one of his chief assets, viz.:—the elimination of bad debts, by scrutinizing beforehand, all applications for credit. It seems to me that the retailer, and I presume the wholesaler as well, should be able to do a larger business with a smaller stock investment at this particular time, than he thought practical before the war, having in mind a stricter censure on credit extensions.

Failures Due to Unwise Credits

In a recent report of a credit expert in the United States, he stated that thirty per cent. of the failures in the country could be well assigned to unwise credits, and from my limited experience as a credit man, I am inclined to believe that this figure would also apply to our country.

Now so much for causes of credits. Let us see what we can do for the remedy. First of all we start out with a sincere attempt at co-operation. There are three important factors who ask for credit; first: "The good pay man." Second: "The slow pay man," and third: "The bad pay man," so let us endeavor to set out a rule to handle each one on his merits.

With the first, or "good pay man," it is obvious that all we need to do is to remind him that his account is due—accounts must be kept straight—may have overlooked bill—you need money for special purpose—small accounts must be closed.

With the second, or "slow pay man," he must be considered as either careless or perhaps that payment is not convenient. We must, through co-operation, tighten up on him and make him show his reason for not paying—by offering inducements; by holding up orders; showing mutual gain; show him his loss by his tardiness; thinking of more drastic measures; threatening to put him on cash only basis; following up more closely; and shame him by placing his record through the credit bureau.

The third, or "bad pay man," who, of course, should not be on your books at all, and I might add, will not, if the proper attention is given application for credit. If through friendship or yard errors he does get on our books, we must use tact and patience. We must re-awaken in him new need for goods; arrange satisfactory adjustment of his account; have personal talks with him; extend payments; accept his note; take rate payments; warn him; threaten him; use the Bureau to collect his account; bring him to court and notify the trade; issue special notices to the trade so that he will not under any circumstances be on credit list again.

This can be obtained by co-operation; as only through keeping in close touch with your brother in business can you hope eventually to weed out the "bad pay man." We have done it in our Association to no small degree; we have learned that men neglect at long range. They cheat in the crowds, and it is the stranger who is sent off with scant consideration. Another of the advantages of co-operation is that no applicant for credit should be a stranger; some one of your associates or your central organization can tell you all about him. We believe that most accounts are lost because the debtor felt that he was sheltered by the masses, so that, with the conscientious and sincere interchange of experience, there will be no masses for him to hide behind.

Our Association has been, and is still, growing to be one to be considered among the purchasers. We believe that, through careful administration and tact, we have taught the purchaser of material that outstanding accounts with our members is, after all, a matter between neighbors, and that there is a shrewd yet kindly eye kept on our business. We have endeavored to point out to him precisely and undeniably—why it is an advantage to pay accounts promptly.

In conclusion, I hope that I have pointed out something which may be of service to our members in dealing with the problem of many novel and clever appeals by which sales managers may clear the way between debtor and payment; to put favorable considerations on the side of promptness and crowd every disadvantage into the other side of the scales—to guard against the twists and angles of delayed payments. Allow no excuse, no chance to get out of sight, and no ground for complaint.

The Cottage Plan Too Costly and Radical

Lumber Companies Generally Do Not Think Mr. Fitzpatrick's Proposition Either Feasible or Economical—Woods Operations Shifted Too Frequently—Would New Housing Scheme Lessen Discontent?

One of the latest types of lumberjacks' cottages in Oregon

There appeared in the last issue of the "Canada Lumberman" a letter from Alfred Fitzpatrick, superintendent of the Reading Camp Association, Toronto, suggesting several improvements of the housing problem in lumbermen's camps. He outlined a plan for the erection of a series of cottages in quadrangle, heated by a central steam plant, and advocated the discontinuance of the

practice of lumber companies paying the railway fares of men to camps, and also the abolition of the method of securing help for the woods through employment agencies.

Several interviews with representative firms in different parts of the Dominion appeared with respect to the feasibility and economy of Mr. Fitzpatrick's suggestions.

In this issue the "Canada Lumberman" presents some further views of leading companies on these phases of the problem, which will no doubt be read with much interest.

Chew Brothers, of Midland, Ont., say:

"We do not think it would be either feasible or economical to carry out these suggestions. To abolish the bunkhouse and substitute a series of cottages, to be heated with steam from a central plant, with all the modern conveniences outlined, including accommodation for each married man to live with him his wife and family, looks very nice on paper, but to put the same into practice would involve a vastly greater expenditure than the gentleman who suggests it has any conception of. Further, it would involve the overcoming of difficulties which do not appear on the surface.

"The bunkhouses of to-day are generally built to conform to the sanitary conditions required by Provincial Board of Health regulations. They have to be built sufficiently large to afford a stated cubical feet of air space for each man, to be properly ventilated, etc.

"Years ago, in the absence of camp rules making it compulsory for men to have their underwear, etc., washed regularly, it is true that some, who were indifferent to the necessity for cleanliness, would go into camp at opening of the season and remain till spring, giving but little, if any, attention meantime to washing clothes, socks, etc. The result was that the camp would become infested with vermin, and some men desirous of keeping clean were unable to do so. This is no longer the case; facilities are provided at camps under which men are required to have their washing done regularly.

"Much greater housing accommodation would be required if the wives and children of married men were to be provided for. We fancy few women would care to live in this way, necessitating the taking of many children of school age away from educational facilities, and incidentally increase greatly the cost of transportation in and out for the family, which cost would, of course, be paid by the man employed.

"Furthermore, many operations are so distant from the source of supply that the cost of teaming provisions and all essentials for camps represents a heavy expense. We have knowledge of where this means over \$30 per ton.

"It would, therefore, be unwise to move a family located at the source of supply to camps when cost of freighting is heavy. It would be along the line of sending friends and relatives of combatants overseas, where food is scarce and transportation difficulties constitute a grave problem. Better leave at the point of production all consumers not essential to carrying on the operation.

"Such a scheme would involve an elaborate and expensive system of heating. If this be doubted let a plan of sufficient buildings to accommodate a force of 100 men, together with such women and children as may accompany married men, be submitted to a competent heating contractor, and we think that the price quoted would convince many of the infeasibility of the plans, apart from the suggestion associated with it—that there should be plumbing, etc., to provide shower-baths with hot and cold water and also a dynamo to generate current for lighting the camps, necessitating the installation of electric wiring, etc.

"Another difficulty to be overcome would be an insufficient supply of water. In many cases where camps cannot be located on lakes or streams, water has to be secured from wells or be drawn. Such a

scheme might be worthy of consideration if camps could be located for use for several years, but, as in the majority of cases, camps are only made use of for one or two years, the expense associated with supplying and equipping them as suggested would be so great as to result in a substantial loss for the operator making such an experiment.

"We hold no brief for the promotion of the interests of those engaged in employment bureaus, but our experience has been that we were successful in getting men through this medium that we could not otherwise have secured. They constitute a central agency, which soon becomes known to men seeking employment and to employers seeking labor, so they are in a position to serve the mutual interests of employer and employee.

"Should there be unscrupulous agencies who misrepresent and mislead men respecting conditions under which they may be employed to work, they should be subject to penalties to deter them from such a practice.

"We do not think the establishment of conditions suggested by Mr. Fitzpatrick respecting housing, heating, etc., would result in removal of the practice of paying railway fares by employers. There are so many cases where men are not in possession of the necessary funds to pay their own fares that unless an employer pays or advances the same, a smaller number would be secured for bush operations. If the principle of advancing fares in the latter case is practised, it necessarily soon becomes general. It is a fact that there are few employers conducting a fair-sized operation who do not lose thousands of dollars every season, due to men taking transportation and either not going to work at all or for too short a time to earn the amount of their fares.

"There are very few operators who do not supply excellent board in their camps—in fact, much better than the majority of us get at home—yet this does not seem to constitute a sufficient inducement for men to remain.

"We do not wish to go on record as opposing any reasonable or consistent plan under which a greater measure of comfort and enjoyment may be afforded men who may be employed in lumber camps. We agree with the writer of the article referred to when he says that men are human, and should be treated as men to the fullest consistent extent, but we are convinced of the impracticability of putting in force the reforms he suggests. In fact, they appeal to us as being so extremely radical as to be unworthy of consideration."

Proposition Not Applicable in the East

Clarke Brothers, Ltd., of Bear River, N.S., write:

"We note with interest the plan that Mr. Fitzpatrick suggests. Not being familiar with the larger camps, housing one 100 men or thereabouts, we are not prepared to criticize the plan he outlines; but applying his suggestions to Nova Scotia conditions would be impossible, for the following reasons:

"In the first place, camps in this province range from 25 to 50 men per camp; probably the average number of men found in the camps in Nova Scotia would not range above 30 men per camp. When a larger number than this is employed at one operation they are housed in more than one camp. Our opinion is that 40 men is an outside number that can be housed comfortably in one camp.

"We build our camps out of frame timber and boards. The posts are 10 feet high, with a square pitched roof; size of camp, 20 x 25; the bunks, 6 feet long, being across one end of the camp. This camp is heated by two stoves, and is thoroughly warm and comfortable. Men sleep on straw ticks filled with clean straw. The writer has slept upon these at different times, and found them very comfortable, and was able to enjoy a good night's sleep.

"Camps are ventilated at each end, so that the air is kept wholesome at all times of day and night. The teamsters sleep in an addition built on to one end of the camp, so that the workmen are not disturbed when the teamsters get up in the morning to feed their horses, and we have yet to hear any complaint as to the manner in which our men are housed.

"In regard to agencies, we have never in forty years engaged a man through any employment bureau. Up to the present we have had

A bunkhouse that is too crowded for comfort

difficulty in securing what help we needed, largely from the country surrounding our operations, many of the men being personally known to us, and some having worked steadily for us for twenty years. We never pay railway fares to the men. They report at our office for work and are detailed to the different camps at points where we are operating. We have no difficulty with our men; they come with us in November and remain with us until spring or until the operation of cutting, skidding, and hauling logs to ice is completed. The conditions, therefore, to which Mr. Fitzpatrick refers, do not exist in Nova Scotia, and we would consider his proposition as not being applicable to lumbering operations in this province.

Would Not Alleviate the Unrest

Fraser Companies, Ltd., of Fredericton, N.B., in regard to the several suggestions of Mr. Fitzpatrick declare:

"We do not think that a series of steam-heated cottages would be practical in the case of small operators, who cut a large part of our logs. We seldom secure help through employment bureaus, and we do not think it practical to stop paying railroad fares of the men, as few men would go to the expense of paying their own fares.

"We doubt if carrying out Mr. Fitzpatrick's suggestions would alleviate the unrest and discontent, provided all other operators could afford the accommodations described. We think that there would still be the desire for change and the inducements of still higher wages and better accommodations in other operations, which is the conversation in a lumber camp as in other occupations.

"We await with pleasure the suggestions of other operators along any lines bettering the conditions of woodsmen, not so much from a pecuniary standpoint as from the standpoint of bettering the condition of the men themselves."

Do Not Seem to Appreciate Improvements

The Keewatin Lumber Company, Ltd., of Keewatin, Ont., say:

"We note Mr. Fitzpatrick's suggestions of changes in connection with the housing of men in the lumber camps. We do not think it economical to abolish the bunkhouses, but we do think that these bunkhouses could be greatly improved. With reference to the building of a series of cottages and having them heated with steam from a central plant, we doubt very much if this could be done throughout the greater part of Ontario, as getting in the equipment to the different places would be very expensive, and, in some places, almost impossible. Timber areas throughout the most part of the province are scattered, and it is only in exceptional cases that you are able to use a camp more than two seasons.

"It might be possible to secure help from sources other than the employment agencies, but it would be considerably more trouble for employers, and would probably mean at times that men would not know where to apply for work.

"We have never been in the habit of paying railway fares. Fares in all cases are advanced only when the men stay until spring. This is customary throughout this part of Ontario, and we have no trouble in carrying it out.

"We thought that we were making some improvement in the housing of woodsmen this year in equipping several of our camps with steel beds and mattresses, but the men seem to be coming out of the camps faster than ever, and are becoming more restless and discontented than they have ever been.

"The improvements mentioned by Mr. Fitzpatrick would probably not appeal to the class of labor we are getting at the present time, as any person who has visited the homes of the class of foreigner we are getting will readily admit that, under the worst of bunkhouse conditions, he is in more sanitary and pleasanter surroundings than he would be at home. If the improvements as suggested by Mr. Fitzpatrick would attract a different class of labor, which would remain at work during the greater part of each year, it would probably be money well spent were the lumber companies to do something along these lines; and we think that something will be done just as soon as the men show they appreciate what the different firms are trying to do for them even at the present time."

Would Cost \$30,000 to House 100 Men

A large operator in the northern part of Ontario, in writing regarding Mr. Fitzpatrick's plan, says that he is surprised that the experience of this gentleman in the lumber camps has not given him a better insight into the question upon which he speaks.

"Mr. Fitzpatrick has shown great spirit and tenacity in his efforts to uplift the lumberjack, and deserves much credit," he adds, "but I have concluded that it is somewhat of a hopeless task so far as the woodsman is concerned. We operate numerous camps and employ several hundred men in the woods (when we can get them), and our camps are situated anywhere from 15 to 16 miles from the railroad, averaging about 35 miles. Any man with a practical knowledge of cost and conditions as applied to a woods operation, and not a visionary, would not be long in figuring out the utter impracticability of Mr. Fitzpatrick's plan to house men in a number of small buildings with

a steam heating plant. If I had time to go into the details it would be easy to convince you that, were the lumbermen to attempt any such plan, the most of the operating season would be taken up in building this village, and, in many cases we would have to abandon it after six months' occupation, and in the course of a year or two have to appoint a receiver and wind up.

"Has Mr. Fitzpatrick any idea what a plant of this description would cost? I do not think so. At a rough estimate, about \$25,000 to \$30,000 to house 100 men. In short, it is neither feasible nor economical. I have for several years done my best to try and induce the lumbermen to establish central employment bureaus and also to make the men responsible for their railway fares, but with absolutely no success. This paying of railway fares is an old custom, established many years ago in the Ottawa Valley, before there was a railway beyond Sandpoint or Pembroke, and when woodsmen had to work their passage up the river in the fall. When we Western men had to go to labor centres between Quebec and Ottawa to get woodsmen, we had to do as the Ottawa Valley men were doing, and pay the railway fares. Because the lumberjack never has the price of a railway fare, our practice now is to advance the fare and charge it up to him; but, unfortunately, we are only able to collect about one-third of them, owing to the fact that the men do not stay long enough with us to earn their railway fares. This brings us back to one of Mr. Fitzpatrick's contentions—that if the men were more comfortably housed they would stay longer with us. With this I do not agree.

"After forty years' experience, in which conditions have improved very materially in the way of housing and feeding the men, they are showing more tendency every year to stay a shorter time in camp. This is particularly so of the French-Canadian, and it seems to be solely due to a spirit of unrest and a feeling that they must get out to some of the towns and spend their money. It is a well-known fact that their accommodation when in the towns is no better than they have had in the camps. I have no doubt that some of this unrest has been created by the employment agent, who in many instances would encourage the men to leave the camps in order that he might make another dollar or two out of them by hiring them again, and for this reason I have advocated responsible central employment bureaus.

"I am entirely sure that Mr. Fitzpatrick's plan, even if it could be carried out, which is impossible, would not alleviate the unrest and discontent that appears to be ingrained in about 75 per cent. of the men who go to the woods."

Expense of Construction Too Heavy

The New Ontario Colonization Company, Ltd., of which Mr. W. K. Jackson is president, and whose land office and mills are located at Jacksonboro, Ont., offer the following interesting views:

"There is no question but that the old-time bunkhouses should be abolished. We haven't for several years back used the old-time bunk, but instead have used the double-deck iron bedstead, with mattresses and blankets, and have constructed good, comfortable bunkhouses, mostly from lumber. We found, however, in Northern Ontario that the log camp is preferable, as it is by far the warmest and, with care, can be kept clean.

"As to constructing a series of cottages, heated with steam from a central plant, it would depend largely upon how long a period the camps would remain there. The expense of such construction, including steam plant, would add very materially to the cost. We would suggest that Mr. Fitzpatrick submit his views in the way of a central plant.

"Fortunately, we have not been obliged to rely upon employment bureaus for our men, although we occasionally have asked for their aid, and we must confess that the results were not very satisfactory. We discontinued advancing railroad fares excepting where we knew our man or men. The concern that Mr. Fitzpatrick refers to as having spent \$12,000 during this season on advanced railroad fares is, in our opinion, a mark, and should have a guardian appointed over it. It is, indeed, bad practice, and we do know that at times it is absolutely necessary; but concerns making such advances should follow the matter up, in protection for other concerns as well as themselves. Otherwise a certain class of men will work the deal for all that they are worth. The trouble has been that organizations who are out for men have gone too far in securing them, and apparently haven't taken into consideration the other fellow employing labor or as to what the results will be in his own case, so that the rotten condition has been brought about by the companies employing labor rather than by the men themselves.

"As to whether improvements about the camps result in the men remaining on the job longer, we have satisfied ourselves that good, comfortable camps and good food are appreciated. We consider that it is up to the lumbermen to go as far as they can consistently in having their own camps comfortable and sanitary, good food, and more or less interest shown the men. General conditions throughout the country are more the cause of discontent than immediate surroundings at camps, and concerns to-day who are not giving their men real

consideration are surely in their own light, as a fair percentage of the men are bound to be influenced by their comforts and surroundings."

Would Not Be Paying Proposition

The J. D. Shier Lumber Company, Ltd., of Bracebridge, Ont., observe:

"With reference to Mr. Fitzpatrick's suggestions concerning camp construction, we may say that we do not believe this scheme would work very well in our locality, as the majority of the camps are from 25 to 50-men capacity and last one, and sometimes two, seasons. Under these circumstances, we do not think it would be a paying proposition.

"As for paying men's fares to camp, we think that we would get very few men, especially at the present time, if we did not. Fares are allowed to them after three months' work."

Would Like Estimate from Expert Builder

Another large lumberman, operating in Northwestern Ontario, says:

"I have your letter of recent date asking my opinion on several phases in connection with the proposition of Mr. Fitzpatrick. I do not think it is either feasible or economical to abolish the bunkhouse as at present operated. It might be both feasible and economical to modify the present bunkhouse plan to some degree, but to substitute for it anything that would mean a complete change for work of so temporary a nature as logging camps is not, in my opinion, practical.

"The cost of installing a series of steam-heated cottages sufficient to take care of the number of men employed in a lumber camp is out of the question when you consider that the most that could be expected to occupy these cottages would be for two brief logging seasons of five or six months' duration. To provide cottages with individual bedrooms for a gang of 120 men, properly equip and heat these cottages with steam from a central plant, without considering the question of dry-houses, shower-baths, etc., would involve an expenditure of from \$30,000 to \$40,000, which, to my mind, puts that plan entirely to one side.

"It would, without question, be economical to discontinue employing men through employment bureaus, but under present conditions I do not think it is possible. It would also be economical to stop paying railway fares, but again the same answer applies.

"I am doubtful whether any of the suggestions, if carried out, would have very much effect on the unrest that is manifested among men who are employed in the camps. In support of this, I would say that I believe an investigation will show that the conditions surrounding the men in lumber camps, particularly with regard to the manner of their housing and feeding, has improved 100 per cent. during the past ten years, while with every improvement that has been made along these lines there has been a visible increase in the unrest. If you go outside of lumber camps entirely you will find the same spirit of unrest there in regard to the physical conditions with which the men are surrounded.

"Do not understand from what I have said that I would not delight to see the conditions in lumber camps made as nearly homelike as it is possible to make them, and do not understand that I would undertake to say that the plan outlined by Mr. Fitzpatrick is impossible. Nothing is impossible, but the question is, what is practical? The difficulty that every operator has to contend with is to harmonize the practical with what would be the ideal.

"I would be glad to see some expert builder give an accurate estimate on the cost of erecting, say, ten cottages, each having twelve bedrooms and a reasonable-sized sitting-room for twelve men, the same to be equipped with steam heat appliances. This would bring that phase of the matter down to something like a practical level."

The Muskoka Wood Manufacturing Company, Limited, of Huntsville, Ont., in regard to Mr. Fitzpatrick's suggestions for improvements in lumber camps, say: "We are afraid the timber does not grow thick enough in this country to permit of building a permanent camp, as suggested. The lumber camps have to be moved almost yearly, and the cost of building modern cottages with heating, etc., as outlined, would be altogether out of the question to be absorbed in a year's operations."

Gillies Bros., Limited, of Braeside, Ont., is another concern which does not think it would be feasible under present conditions to operate along the lines suggested by Mr. Fitzpatrick.

Cost is the Great Barrier

The Pembroke Lumber Company, of Pembroke, Ont., state: "We do not think it feasible or economical to abolish the bunk houses as at present operated in lumber camps. It is also impractical on account of the cost to erect cottages, let alone heating them with steam, while it is necessary to move shanties so often as we find it in Ontario.

"Regarding the matter of securing help from employment bureaus:—It must either be done in that way, or else each company would have to have a hiring agent of its own, and as a matter of fact, we have found it necessary to use both systems during the past

year in order to secure enough men. Should we cease to pay railway fares of men to the different camps there would be a great number whom we would never get, as four out of five of them have not five cents in their pockets when they are hired and could not possibly get to the camps unless we paid their fares. On the other hand, if they had sufficient money to pay their fares, it would simply mean that we would have to give them higher wages. It occurs to us that for the class of men that go to the lumber camps, conditions as they exist today in well regulated camps are quite satisfactory to them."

The River Ouelle Pulp and Lumber Company, St. Pacome, Que. write: "As a suggester, Mr. Fitzpatrick is in a class by himself. Theoretically his scheme seems to be all right, but we have grave doubts as to its working out in practice."

Making Use of Well-Equipped Cars

The Victoria Lumber and Manufacturing Company, Chemainus B.C., say: "We believe there is a great deal in Mr. Fitzpatrick's contention. While we have for some time used cars in place of bunk houses, we have recently outlined a policy for the building of new cars which will much improve labor conditions, giving shower-bath, drying-room, electric light, etc.

"We cannot, however, agree with Mr. Fitzpatrick's suggestion of putting in steam heating, as we find it is injurious to the men's health. One man will want the steam on at night and others will not want it. As you are doubtless aware, the average logger goes to bed with most of his clothes on, and the general opinion of the Coast loggers is that it would be detrimental to their health to put in steam heating.

"The great difficulty and unrest, though, is caused by the lumbermen bidding against each other for labor, during the shortage. The United States Government, we understand, are about to set standard wage, which, in our opinion, will better conditions materially, and any work that you can do along this line will be of material benefit."

Effect of War on Lumber Business

Present Conditions Will Be Fully Discussed at Forthcoming Session of the National Association

New York, March 12.—At the twenty-sixth annual meeting of the National Wholesale Lumber Dealers' Association, which will be held at the Waldorf-Astoria Hotel on Wednesday and Thursday, March 27 and 28, it is expected there will be a record attendance.

The main theme for discussion will be war conditions as they affect the wholesale lumber business. It is announced that a complete report will be submitted by the special committee, which has spent so much time in its investigation at Washington and elsewhere for the purpose of formulating some satisfactory method of co-operation with the government in its lumber purchases. This problem will be thoroughly discussed, as many members are very much interested in it.

The special railroad committee which was appointed at the last annual meeting in Pittsburg will submit in detail its report in connection with efforts to obtain relief from congested car and transportation conditions as referred to at that meeting and as have developed during the past year. Waddill Catchings, chairman Committee on Co-operation With the Council of National Defence, will discuss some of the problems confronting the industry, and other speakers will talk on matters of a special interest to the wholesale lumber business. The Federal Reserve Board will be represented in the discussion on trade acceptances, which will be considered in connection with an important discussion on terms of sale.

The association banquet will be held on Thursday evening, March 28, and several prominent speakers, including one from Canada, will deliver addresses. A large number of banquet and hotel reservations have been made, and Secretary Perry is urging members to arrange for their accommodations as early as possible.

The New York Lumber Trade Association has arranged excellent entertainment for Wednesday afternoon and evening, and a complimentary luncheon will be given by that association to the men at the hotel on Wednesday noon and a tea to the ladies at 4.30.

Canadian Lumbermen Lead in Activity

According to Capt. W. E. Schuster, traffic officer of the headquarters staff of the Canadian Forestry Corps, who is now home on furlough after two years' absence overseas, the Canadian lumberjacks in England are working with such rapidity and efficiency that their output far exceeds what they produced in their native forests. Capt. Schuster states that the 224th Battalion was organized on March 1st, 1916, and by May 13th had made its first delivery to the War Office in England. The battalion has now grown to a division, and is under the direction of Brig.-Gen. Alexander McDougal, of Ottawa. Premier Lloyd George has visited one of the lumber camps in Scotland, and their Majesties have taken a personal interest in the work of the men. The Canadian forestry and railroad battalions are doing invaluable work for the men in the field.

Provides Large Shed for Rural Customers

How Brantford Lumber Dealer Furnishes Everything for Buildings, Even to Door Hinges—His Unique Advertising Plans Bring Results—Timely Topics Reviewed by Supply Men

The well kept retail lumber yard of John T. Grantham, Brantford, Ont., who is seen in the picture. The sign high up on the posts is "children not allowed in this yard"

"Grantham will protect your interests if you will buy from us. We sell everything in lumber and building supplies."

This and other attractive signs in large letters decorate the neat fence surrounding the retail lumber yard of John T. Grantham, 23 Walter Street, Brantford, Ont. Mr. Grantham is a live and aggressive factor in the building supply trade, and until a few years ago carried on an extensive contracting business. Then he laid in a small stock of lumber, principally for his own use, and from this broadened out into operating a planing mill. Gradually various lines were added until now he points out with pardonable pride that he can supply everything from the cellar to the roof.

Mr. Grantham enjoys an exceptionally active trade with the farming community and has provided a large shed whereby the farmers when they come in to get supplies can place their horses under cover and feed them. This is a great convenience and one that is much appreciated. As there is no well equipped hardware store in the immediate vicinity, Mr. Grantham gradually stocked paints, varnishes, oils, glass, hinges, door locks and house hardware.

"Yes," he stated, "I can supply everything, and when a farmer drives into my yard he can depart with every article that he requires. I think this has been one of the strongest points in building up my business. I do some advertising of a unique character. Not long ago I had printed on black ash boards, postcard size, an announcement headed 'Eagle Place Lumber Yard. A busy plant in a lean year is a sure sign that we are delivering the goods.' I also make it a feature to point out the advantages of buying from a concern that can supply the customer with everything needed to build. Other considerations which I emphasize are 'quality, service and satisfaction'; 'that we are the kind of a concern that wants the kind of a customer that you are.'"

Another novelty is a piece of fibre board roofing on which appropriate reading matter is printed, and a card advertising the same line of material, bears the international wireless telegraphic code. Naturally the originality of these methods extends the business of John T. Grantham, the builders' supply man.

Mr. Grantham specializes in several lines and last year furnished parts for a number of wooden garages, all of the work being turned out in his shop. One of the latest lines that he has gone into is wire fencing, and for years he has been in a position to supply stone and brick, while cement is always on hand. "I am a firm believer," continued Mr. Grantham, "in having a representative and up-to-date stock. There is nothing like service, and if you send a builder or a farmer away satisfied he is sure to return when requiring something more in your line."

Touching on building operations, Mr. Grantham said that Brantford, like all other urban communities, had naturally received a setback owing to the high cost of material and labor. There was, in his opinion, too much disposition on the part of those who had erected houses to get rid of them at the present time at a small advance on the original cost. This was the wrong basis upon which to proceed, especially as replacement values should be considered. It is on the plane of what it would cost the man today to erect a house that all deals should be negotiated. Mr. Grantham does not think that there will be any decided slump after the war so far as industrial activity is concerned.

Another noticeable feature in connection with the retail lumber and builders' supply business noted by Mr. Grantham and other men in the same line is the better class of houses erected. Hardwoods are in much more general demand and a good turnover has been developed in oak, maple and birch flooring, while for interior trim chestnut and Georgia pine are used in the medium classed houses, and oak in the more costly and expensive dwellings. The tendency seems to be to have the natural finish in woodwork. Mr. Grantham makes

some doors, sash and frames in his own plant, but not to any great extent, for he purchases standard sizes in all these lines which, he says, he can handle more advantageously. "I never," he continued, "make anything that some other fellow can produce cheaper than I can. I realize that firms turning out quantity production on standard goods can give better quality, service and price than one who operates in a limited capacity. I therefore believe in handling all ordinary requirements in sash and doors rather than making them myself. I hope the agitation to have the Mechanics' Lien Act amended will be successful. As at present constituted the measure is very favorable to the crook contractor or the speculative builder who may not be worth a dollar. Twenty per cent. drawback is no protection to the supply men. Make the owner responsible is a move, I contend, in the proper direction."

Desires Standardization of Mouldings

Mickle, Dymont & Son have for eighteen years been one of the busiest manufacturing establishments on the leading thoroughfare of Brantford. They carry an exceptionally large stock of lumber and do all kinds of interior work for stores, factories and residences. Oliver W. Rhynas, who has been with the firm fifteen years, served the first eight years as superintendent of the plant and since then as manager. He has been actively identified with the woodworking industry for 27 years and is a native of Goderich, Ont. Mr. Rhynas spent some time in the west and his insight into the lumber supply line has been broadened by his interest and enthusiasm in his work. An energetic member of the Retail Lumber Dealers' Association, he believes there are many timely matters that the organization can take up. Among them might be the standardization of grading lumber, and also the standardization of mouldings. The firm formerly prepared plans for builders and contractors, but found that after going to a lot of trouble, their ideas were frequently used to their own disadvantage. In other words, jobs would be peddled around and the firm which had gone to all the pains and expense of preparing sketches or plans did not have a look-in on the final result. Mickle, Dymont & Son had a very satisfactory year in 1917 and believe that when everything is taken into consideration, the showing in 1918 will be quite as large.

O. W. Rhynas, Brantford, Ont., who strongly advocates the standardization of mouldings

"Yes, we have had come trouble in getting deliveries on various lines of lumber, and the help problem has also been a serious factor. At times we have not been able to secure enough employees and many that came to work were green and inexperienced and therefore only from 50 to 75 per cent. efficient," declared the manager.

Mr. Rhynas is particularly interested in the standardization of mouldings, and believes that if a universal moulding list was adopted in Ontario it would not result in contractors, supply men and others having six or seven different patterns of one type of, say, 4-inch crown moulding. As a result of having no standardization, contractors and consumers have to pay more for their supplies by reason of the variations in patterns, and owing to factories having to grind new knives in order to make a particular style. If all crown, band, panel and base mouldings, as well as casings having the same detail were standardized, builders and others could order from certain patterns which would be numbered, and much expense in production would be effected, while a better service would be furnished.

"It is just like this," declared Mr. Rhynas, in conclusion, "men's hats and shoes are made today on certain blocks and lasts, many of which have become standard. The result is that we have a much better finished article along these lines of apparel than if we went in and placed an individual order, while the cost has been considerably reduced by standardization. There are many other matters that might also engage the attention of the trade through the medium of the Retail Lumber Dealers' Association. I am thoroughly in sympathy

with any movement to amend the provisions of the Mechanics' Lien Act, which has been anything but protective in character so far as the builders' supply man is concerned."

The First to Introduce B. C. Fir

The Ingleby-Taylor Company, Limited, whose plant is in West Brantford, are progressive dealers in lumber, lath, shingles and builders' supplies. They have in the past erected a number of dwellings in the Telephone City and this season may undertake the construction of more. They find that the building trade has been considerably affected by the war and the high prices for labor and materials. There is need of more residences in Brantford, and all the factories in the various lines of activity are busy. The firm confine their operations in the lumber line strictly to the retail end and enjoyed a good business last year in spite of general quietness in a structural sense. The Ingleby-Taylor Company were the first to introduce B. C. fir for interior trim in houses in Brantford, and have found that excellent satisfaction has resulted from it. They carry out the erection of

The plant of the Ingleby-Taylor Company, Brantford, Ont., who were the first to employ B. C. fir for interior trim in houses in the Telephone City.

all buildings, from the preparation of sketches to estimating and supplies, and sub-let portions of the work. The original firm was Ingleby and Fitness, who conducted a general contracting business for some years. Then Mr. Taylor, who was a builders' agent, was taken into partnership, and a small planing mill acquired on Burford Street. This was operated for a short while, when their present well equipped plant was built. The firm was incorporated in 1912 with Charles E. Ingleby as President, Edwin E. Taylor as Vice-president, and H. A. Jull as secretary. The concern, who handle roofing of various kinds, and do a large general supply business, look forward to a fair season in building operations. They have not experienced much difficulty in obtaining all the labor in the factory that is required, and report, while shipments of lumber have been rather slow, they have no particular complaint to make. The Ingleby-Taylor Company are members of the Ontario Retail Lumber Dealers' Association, and believe that body will prove a useful and beneficial organization to the trade.

Specializing in Portable Houses

The Schultz Brothers Company, Limited, have been going for half a century or more in the Telephone City. Geo. Schultz, the president, founded the industry on its present site, away back in the early sixties. The original plant was smaller than the main office is today, and in order to make things move expeditiously, Mr. Schultz was in the habit of taking jobs for shingling roofs and doing the work by moonlight, after laboring in the factory all day. Schultz Bros. Company have extended their operations in several directions and specialize on a number of lines in which much development work is being done. They go further in the building arena than most supply men, for they carry out everything from the preparation of the plans and sketches to handing the key over to the owner on the completion of the work. Among recent large undertakings successfully executed by this firm were the Sarnia High School, the Trenton High School, the Y. W. C. A. Building, Paris, while at the present time there are in hand contracts for the new Merchants' Bank Buildings in Galt and Watford. There is not a thing in the building line which Schultz Brothers do not carry—brick, cement, stone, concrete, etc. They have three well equipped lumber yards, and it is their intention to broaden more than ever during the coming season, partly from patriotic motives, and partly because it is an allied line, by adding coal and wood. J. S. Schultz is managing director of the company, who do both a wholesale and a retail business. They have made a specialty of sectional portable buildings, which are used for summer cottages, settlers' homes, bunk houses, prospectors' cabins, boat houses, refreshment booths, mess rooms, rural churches, etc. The firm consider that the possibilities

in this line will be developed to a very much larger extent after the war, and they hope to receive some orders from the Old Country for this class of building. They emphasize the fact that a wrong conception still exists in regard to portable houses which, in the minds of many people, has become associated with the idea of cheap, fragile buildings which any decent sized storm would blow down. On the other hand they drive the fact that their sectional edifices are permanent and able to withstand the elements, while, at the same time, they are particularly attractive and easy to erect. Schultz Brothers Company specialize in everything from a portable garage to a poultry house. In the woodworking department they added some years ago, games, novelties and kitchen utilities, such as rockers, parlor billiards, card tables, crokinole, lawn seats and swings, household articles, such as ironing boards, kitchen cabinets, pastry boards, medicine cabinets and last, but not least, wheelbarrows.

"Our business is of a most comprehensive character," said Mr. Schultz, "and we find that it is growing in every direction. Of course, building operations have been hampered by high prices and the fact that many contractors were afraid to undertake construction work, for fear that a slump might set in should the war suddenly end, and they would be left with high priced structures on their hands. Notwithstanding this there has been a fair amount of new work, while alterations and repairs have kept up much better than was expected. We already have several good enquiries for the coming season and look forward to very fair business. In regard to supplies we have not had much difficulty in getting all the lines that we require, and have no grievance against the transportation companies."

Army War Work Opens Up New Industries

The war has opened up many new factory and mill products for Canada, while many others will follow to supply the needs of Europe during the reconstruction period. Several lines have been introduced on this side of the Atlantic, for the Allies themselves have been too busy to produce the commodities. Among the most potent factors in drawing attention to Canada have been the Canadian forestry battalions in Britain who have taught the people of the United Kingdom the futility of so much man-handling in the lumber business. Now, according to reports to hand from commercial agents and others, the result is seen in the growing demand for Canadian sawmills in Europe. The great housing problem will be one of the chief post-bellum activities, and statisticians state there is a shortage of three hundred thousand houses in Britain alone, not to speak of what France and Belgium and the other devastated nations will require.

A recent despatch from London, Eng., states that it is a question whether or not Canadian lumbermen will be able to compete successfully for the business in Europe. There has been a great deal of destruction of valuable timber in the allied countries, but the neutrals, more particularly the Scandinavian countries, are the great suppliers of lumber. Norway and Sweden have, heretofore, done much valuable business with the other countries. If they cannot meet the demand, and ocean rates and carriage can be provided, Canadian lumbermen should be afforded an opportunity of doing a profitable trade. The result, therefore, hinges largely on transportation facilities. The encouraging word is received that if the lumber manufacturers of the Dominion cannot find a market for their products there will be a big demand for the equipment of sawmills, which will be furnished by Canadian firms. Canadian sawmill plants are to be found now both in France and Great Britain—in fact, every country in Europe except those of the enemy. The installations work so smoothly, accurately, and economically that there would seem to be a bigger requisition than ever, considering the reduced demands for manual labor. If business can be pushed when the war is over, there is no reason why Canadian machinery will not enjoy a greatly enlarged market. Airplanes are being commercialized and their use made general for many purposes. For them Canadian spruce is largely employed in the frame-work, and special saws are required for this work, which some Canadian firms have added to their output.

President May Commandeer Timber or Lumber

A bill was recently favorably reported by the Senate Military Committee at Washington empowering President Wilson to commandeer timber or lumber needed for the army, navy, or shipping board. As difficulty was encountered, particularly by the shipping board, in securing lumber for shipbuilding, and by the army aviation service in getting spruce for airplanes, the immediate situation of which the bill is designed to remedy, the Military Committee chairman introduced the measure, which received unanimous approval. An amendment was added authorizing the President to delegate his authority in commandeering either timber or lumber to any department or agency he might designate.

How Wireless Works in Forest Service

The First Requisite of Radio Apparatus is Reliability—Cost of Installation and Operation—
Its Many Advantages in Suppression of Fires

By Wm. L. Fletcher, sales manager Cutting & Washington, Inc., Cambridge, Mass.

I think that the radio engineers and manufacturers should come to you, not with the idea of selling you something, but to co-operate with you to find out whether or not you can profitably use wireless. Consequently, I shall try to make this brief talk a basis for future thought and discussion rather than a statement of just what you can and cannot do with wireless.

Frankly, this is really the only way to approach the subject, because no one knows just how you would use wireless if you had it, or just what radio apparatus installed in your forests will do. As an example of what I mean, the distance which a wireless set will send

the future the wireless telephone will be developed to the point where you can use it to advantage, but in my opinion, that time is several years off. It is true that wireless telephones are being successfully used in certain kinds of work, but the instruments are delicate, hard to adjust and expensive. They would not stand up under the hard usage they would get in the woods.

The first requisite of radio apparatus from your viewpoint is reliability. Your sets must work when you want them, and to do this they must be simple, easy to operate, rugged and fool-proof. The modern wireless set possesses these characteristics to such a degree that it can be operated by anyone who knows the code. By this I mean that it can be operated and kept in operation by any ten year old child of average intelligence. The radio apparatus of to-day is very different from that of two or three years ago.

Various people have asked me how and where they could get operators. The answer is extremely simple. All the commercial stations in the world operate under the direct supervision of some government and have to comply with the rules and regulations of the government under whose jurisdiction they come. All commercial

The Sending Apparatus

depends upon a number of factors, among which are the height and length of the antenna, amount of electricity in the atmosphere, and the character of the surface over which messages are sent. Any wireless set will send farther over salt water than over fresh water and farther over fresh water than over land—but just how much farther we don't know, and won't know until we install some sets and try them out.

I have seen a statement by one of your members that 99 fires out of every hundred can be extinguished by one or two men if they are reached within half a day after they start. I also understand that it is possible for a man in a lookout tower with a range finder to place almost the exact location of a fire if he can communicate with the man in the next tower and get a reading from him, but that in hazy weather one man working alone in a tower with a range finder cannot place the location of a fire with any great degree of accuracy. Under these conditions why can't we solve the problem by erecting watch towers at various points, equipping them with range finders and wireless sets and keeping a few men at each station? With such an arrangement fires would be quickly discovered, accurately located and reached within a very few hours after they started. Ten, if some of them should get beyond the control of the one or two men sent from the nearest station to extinguish them further help and perhaps mechanical equipment could be easily and quickly summoned by wireless. If aeroplanes come into general use they can very easily be equipped with wireless and maintain constant communication with the lookout and central stations.

Wireless Telephone Not Yet Possible

Several people have asked me if they can use wireless telephones. My answer is emphatically No! It is probable that at some time in

A Typical Wireless Installation

wireless stations, whether on land or ships, and all commercial operators are in one of two classes—first class or second class. Those in the first class send and receive at the rate of twenty words a minute, and those in the second class at the rate of twelve words a minute.

The rate of speed at which you send is a matter not deserving of much attention. You can all begin spelling out one word a minute if you want to; learning the code and acquiring speed is all a matter of practice. Any ordinary man can get up to twelve words a minute in a month or six weeks by practising during his spare time. Speed in your work, as I have said, is not necessary, but the kind of men you have in the woods will take to wireless like ducks to water, and by the end of the first season second class operators will be thicker than rabbits.

When I said that no one knows how far wireless sets installed in the woods would send I did not mean that the modern half kilo-

watt set could not be relied upon to maintain constant communication for any distance up to 40 or 50 miles. If you were working from 15 to 30 miles, as you would most of the time, the half kilowatt sets would handle your work in an entirely satisfactory manner. About the only time when you might not be able to work these distances would be at the peak of a heavy thunder shower.

Half Kilowatt Set Most Satisfactory

In considering wireless I think you should consider only the one-half kilowatt set. Quarter kilowatt sets could be used in some cases, but they would cost only \$100 or \$200 less than half kilowatt sets and would, on the whole, be much less satisfactory. Any radio set at night will send from two to five times as far as it will send during the day time. No wireless set will send so far over forests as it will over water. Also, the condition of the land, whether it is dry or wet, affects the range of radio apparatus. It is my opinion, however, that at night the half kilowatt set about which I am talking could be depended upon to work regularly from 200 to 250 miles. It would work frequently from 500 to 1,000 miles, but you don't want to count on what it will do once in a while. A two kilowatt set with a good ground and a long, high antenna could be relied upon to work 500 miles every night.

I bring out these points because I think that when you once get started using wireless you will find it useful in a great many ways. You can put in a set at your mill and talk to your forest stations. You can order supplies and report accidents by wireless and use it in many other ways. In many places it will be possible to work with one or more government commercial stations. There are a number of these stations on the St. Lawrence River and on the Great Lakes.

All government and commercial radio sets have at least two wave lengths. The idea of having two or more wave lengths is to keep the air from becoming "jammed." Two men talking on the 600 meter wave length do not hear, and are not heard by two other men who are talking at the same time on the 300 meter wave length. The government and commercial steamship companies use two wave lengths, 300 meters and 600 meters. For your work I think that it would be good business to use some wave length other than 600 meters as your standard. If you did this you would not interfere with the operation of the government and commercial stations and would therefore be less liable to have the government interfere with you. If desired, each set could be equipped with three wave lengths, two of which you could use in talking among yourselves and the other in talking with commercial stations.

The Installation is Not Expensive

Wireless is not tremendously expensive. I cannot give you any accurate figures on the cost of wireless stations, but I believe that a wooden tower, generating unit and complete wireless set could be purchased and installed for about \$3,000. A wireless set is good for from ten to twenty years of service. The up-keep on your stations would be practically negligible, perhaps from \$10 to \$35 per year. If you figure that a set is good for ten years and charge the first cost off in equal annual installments then the cost of your equipment for each year would be about \$325. To this you would add the cost of gasoline for your generating unit and get your total annual cost. Certainly, wireless at \$350 per year per station is worth considering.

If our positions were reversed and I were considering the installment of radio apparatus I would ask the radio manufacturers four questions:

1. Is your apparatus reliable? Will it stand up under hand usage and work when desired?
2. Is it efficient? How far will it send?
3. What are the initial and up-keep costs?
4. What guarantee do you give that the apparatus is as represented and will give satisfaction?

I believe that if you are interested in this subject and would like to find out whether or not you can use wireless to advantage and will go to the various manufacturers with these questions you will find them ready and willing to co-operate with you to find correct answers.

The Province of New Brunswick uses nearly 300,000,000 board feet of wood every year, and from this the provincial treasury is enriched by over half a million dollars. As most of New Brunswick's forests are grown on soils that can never be used for agriculture, it is necessary that none of the living timber areas should be wasted by fires or extravagant cutting. The Forest Service of the province is being put on a modern and energetic basis, and the Forestry Division has authority to undertake the most effective fire-prevention measures and impose stricter supervision upon all those who cut timber.

Amendments in Workmen's Act

Special Committee to be Named to Bring Important Suggestions to Attention of Members of Lumbermen's Association

At a meeting of the local committee of the Canadian Lumbermen's Association, held in Toronto recently, W. C. Laidlaw was appointed Chairman; A. E. Clark, Vice-Chairman, and D. McLaren, Secretary. The other members present were J. G. Cane and A. C. Manbert, the latter representing W. E. Bigwood.

It was recommended that the executive of the Canadian Lumbermen's Association name a special committee to deal with the Workmen's Compensation Act.

At the late annual meeting of the Association held in Montreal an able and thoughtful paper was read by Mr. H. I. Thomas, of Ottawa, who urged that the measure should embody several new features.

The amendments that he proposed were:—The adoption of the current cost plan so that deferred payments should not be capitalized, and a huge reserve fund built up whereby large sums of money are withdrawn from industries long before their expenditure is needed, and placed in a reserve fund which may not be needed. It was contended that this money should be kept liquid in the industries of Ontario. Other amendments proposed were to the effect that corporations giving satisfactory evidence of financial stability could elect to stand outside the group in which they naturally fall and pay individually the actual amount of the compensation awarded their injured employees; that the provisions of the medical clause should be changed so as to place doctors under the direction of the employers, who are paying their bills, instead of under the control of the board, which is not in a satisfactory position to judge of the merits of each case; that there should be a power of appeal from the decisions of the board to a judicial tribunal; that safety associations should be removed from the control of the board under which they have fallen, and lastly, that the objectionable "seven-day clause" should be changed. It was stated that this would eliminate the constant malingering which now takes place and would remove the temptation of an injured employee to remain away from his work sufficiently long to bring him under the compensatory provisions of the Act. This change could be brought about by granting compensation for the exact period of disability, however short it might be.

A motion was carried by the executive that the Canadian Lumbermen's Association heartily approves the sentiments expressed by Mr. H. I. Thomas in his address, and that, as an Association, we should urge the adoption by the Ontario Workmen's Compensation Board the following:—

- 1.—That all assessments should be based on the so-called Current Cost Plan, that is to say, deferred claims shall not be capitalized.
- 2.—That any firm or corporation able to show satisfactory evidence of its financial stability may elect to stand outside the operation of the funds connected with the group in which the industry would be otherwise included and may pay individually the amount of the compensation awarded by the Board.
- 3.—That all doctors, nurses, etc., shall be under the jurisdiction of the employer instead of under the Board, providing that such medical care and hospital accommodation are adequate and satisfactory to the Board.

Association Appoints Committees

Wholesale Lumber Dealers Select Members of the Various Bodies to Look After Details in Different Departments

The Wholesale Lumber Dealers' Association, Toronto, of which A. E. Clark is Chairman, has appointed the various sub-committees who will attend to the work of the different departments of the organization during the coming year. The personnel is as follows:—

Administration and Membership—C. W. Wilkinson, J. A. McBean and Alf. Read.

Bureau of Information—A. E. Eckardt, A. C. Manbert and H. J. Terry.

Fire and Marine Insurance—W. C. Laidlaw, A. E. Cates and W. E. Bigwood.

Arbitration—Fred Bigwood, R. G. Chesbro and W. T. Eagen.

Legislation—W. J. Lovering, H. A. Leak and J. L. Campbell.

Railways and Transportation—A. C. Manbert, Duke Johnston and Guy H. Long (Hamilton).

Inspection—J. P. Johnson, F. V. Wilson and W. C. Gall.

Audit and Finance—J. B. Jarvis, H. J. McDermid, and J. L. Macfarlane.

Trade Relations—A. E. Gordon, W. J. Hetherington and Maurice Welch.

Terms of Sale—A. E. Clark, Alex. Read and D. McLaren.

Committee on Entertainment—A. J. Johnson, James A. Summers, R. McDonagh and C. G. Anderson.

Shipping Hinders Pulpwood Cutting

Inability to Furnish Cars Results in Great Accumulation of Wood Along the Tracks in Northern Ontario

Pulpwood cutting along the Timiskaming and Northern Ontario has been seriously interfered with during the past few weeks by reason of the railway not being able to furnish cars and by embargoes placed on shipments. This season the firm of McPherson, Dudley & Imrie, which is composed of A. McPherson, of Longford Mills; A. N. Dudley and R. Imrie, Toronto, undertook the work of getting out some twenty-eight hundred cords of spruce pulpwood on their limit at Round Lake, in the township of Boston, west of the T. & N. O. line, a hundred and fifty miles north of North Bay. The wood was cut for a considerable distance along the railway tracks and is now piled up awaiting shipment. Only one car was obtained during the month of February, whereas it was expected that an average of three cars a day would be secured. The wood is to be delivered at Thorold and other points, and, on an appeal being made lately to Chairman J. L.

Pulpwood camp of McPherson, Dudley & Imrie, at Round Lake, Ont. A. N. Dudley, of Toronto, is seen in the centre of the group, wearing a fur coat.

Englehart, of the T. and N. O. Commission, a promise has been made of better shipping accommodation. The pulpwood, which costs about seven dollars, f.o.b. cars, is piled up in ten tiers, four hundred feet long, and from seven to eight feet in height.

The company erected a camp near their siding at Round Lake, and the accompanying picture shows Mr. Dudley (wearing a fur coat) in the centre of the group, while on the left is P. Helm, book-keeper (who is a returned soldier, having been shot through the chest when overseas) and on the right is Mr. Merkley, of Gravenhurst, foreman of the camp.

McPherson, Dudley & Imrie have taken out sufficient logs in Boston township to make about half a million feet of lumber, and intend erecting a sawmill at this point with a capacity of fifteen thousand feet a day, which will be increased next year.

Another concern, which in years past has been active in pulpwood operations along the T. and N. O. and the Transcontinental Railway, is the Monteith Timber and Pulpwood Company, who have their headquarters in Cochrane and a mill on the Driftwood River. Last year they took out over forty thousand cords of pulpwood which was purchased from the settlers, but during the season found it difficult to obtain cars. The firm intended handling as large a cut again this year, but, owing to transportation troubles, have found it impossible. E. R. Heyland, of the company, states that they will not have more than twenty thousand cords, and many of the settlers stopped cutting early in the winter owing to the fact that the various buyers were backward on account of the serious problem of distribution.

B. C. Industrial Progress Reviewed

Dealing with the lumber industry, J. A. Cunningham, the retiring president of the British Columbia Manufacturers' Association, who presided at the fourth annual meeting, held recently in Vancouver, stated that the past year had been the banner one, although the export trade had fallen off owing to the tonnage shortage. The total output of the industries of the province in 1917 outside of agricultural products amounted to \$180,000,000, while, with the addition of agricultural products, the aggregate was \$217,000,000. A total of 58 new general industrial plants had started operations in the province during the past year. Mr. Cunningham stated there had been little export

trade in the province outside of the basic industries. Tonnage was the principal drawback, and, until normal conditions returned in shipping, it was almost hopeless to attempt to enter the foreign markets. He advised manufacturers to prepare for the foreign trade after the war, and, to do this, shipbuilding should be encouraged. He urged a British Columbia merchant service, and said these ships should carry Canadian and United States trade with the far East.

Touching upon shipbuilding, the president stated that five new wooden shipyards had been established during the past year, making seven in all. The contracts to date cover 40 boats, schooners, and steamers. It had also been stated that orders had been placed for 40 more vessels for the Imperial Government, but this report was not yet confirmed. The Manufacturers' Association had knowledge of two further yards being established for the building of wooden ships, with orders for 10 and 12 boats respectively, and an announcement of their location would be made in the near future.

Wooded Wealth Along the Canadian Northern

At the Canadian Northern Railway Arbitration Board sittings held recently in Toronto, when explaining the freight traffic development between Ottawa and Sudbury, Cyril T. Young, manager of the eastern land department of the C. N. R., made some interesting statements. At Gowanda, where a number of rivers and lakes met, there was 200,000,000 feet of lumber, which meant that it would supply milling operations of about 25,000 to 30,000 feet a day for the next thirty years. At Follette, a series of sawmills had been established by the C. N. R. where ties were manufactured, and at the same time pulpwood was taken out. Throughout that section, Mr. Young explained that the railway owned 2,000,000 acres of land. To show the significance of the pulp industry, he stated that 611,320 tons of newsprint were manufactured last year, of which nine-tenths was exported, and that one million cords of wood had been exported in 1917 from Ontario and Quebec provinces. In the Nipigon district he contended there was enough pulpwood to keep a paper mill running for the next thirty years.

Ellwood Wilson, chief forester of the Laurentide Company, Grand'Mere, Que., also gave evidence regarding land values along the C. N. R. He said that the Laurentide Company has enough pulpwood growing to last the next forty years. Reviewing the pulp resources of the Dominion, he thought that there would no longer be effective competition from Scandinavia because of improved methods of manufacture in Canada and the increased patronage from the United States since the war.

The Attack on Stumpage Allowance

In the recent investigation relating to the price of newsprint paper much difference of opinion was recorded and some objection taken to the allowance of Commissioner Pringle in permitting two dollars a cord for stumpage on pulp wood on the limits of the paper producers. The objections raised were that, as some of the operating companies had paid far less for their limit than this, they would be enabled to value any concession at a much higher figure than it cost them.

The question has been raised in connection with the Abitibi Power and Paper Company that, on this basis, the company would be able to appraise their holdings at from twelve to sixteen million dollars, for which they had paid nothing more than regular dues. Victor E. Mitchell, K.C., a director of the Abitibi Company, takes exception to this objection, and, in a recent interview said:

"You might just as well say that the government has made the railways a present of the total value of the lands that they hold and high value they have developed after running their lines through them. The timber limits are not worth one dollar until millions of money have been spent on them by the company in the erection of paper mills. This new value should go to the people who put in the money.

"Again, you cannot capitalize the whole of the limit as worth so much at \$2 a cord, or whatever the allowance, figuring on the total estimate of cords in the limit. One-third or one-half of it might be wiped out in a single fire, and the value would disappear entirely.

"Moreover, in a large tract of land like these limits, there is not an accurate estimate made, and the statement would naturally make the estimate as large as possible. The estimate has never been proved, and, in any case, the company never get the full amount of the estimate off the limit.

"Then there must be considered the fact that in the operation of timber limits the nearest wood is taken off first, and that each year the cost becomes higher and higher."

Kenneth McKenzie, who conducts a retail lumber business in Penticton, B.C., and is President of the Board of Trade in that centre, is now doing a large fruit box agency business. This trade is increasing rapidly as a consequence of added fruit crops year by year in the Okanagan Valley.

Budget of News from Ottawa

E. R. Bremner, Ottawa, Member of Joint International Committee of C. L. A.

Ottawa, March 12.—(Special to "Canada Lumberman.") — Notices have been sent out by Mr. Frank Hawkins, secretary of the Canadian Lumbermen's Association, regarding the appointment of the members of the Joint International Committee and proffering the assistance of this recently-appointed body to the War Trade Board of the Dominion. A reply has been received from the latter, in which satisfaction is expressed at the action of the lumbermen.

E. R. Bremner, who is Ottawa manager for Watson & Todd, and president of the Board of Trade in the Capital, is the local member of the special committee. Mr. Bremner, who spent several years in railway work, has always been active in anything that he undertakes, and has rendered valuable service in a number of public capacities. The other members of the special committee are W. G. Power, of St. Pacome, Que., president of the Canadian

Lumbermen's Association; Daniel McLachlin, of Arnprior, first vice-president of the Canadian Lumbermen's Association; W. E. Bigwood, of Toronto, late president, and A. E. Clark, of Toronto, chairman of the Wholesale Lumber Dealers' Association.

No date for the first meeting of the special committee with the War Trade Board has yet been set, as it is not known how soon President Power, who is spending some time in the Southern States, can be present to head the committee.

The Canadian War Trade Board, through the medium of Sir George Foster, Minister of Trade and Commerce, its chairman, has expressed satisfaction for the progressive step the Canadian Lumbermen's Association took in creating an advisory committee for affairs dealing with and affecting the lumber trade.

Indications that building activity is needed at Ottawa was instanced during early March, when householders contemplating moving May 1 exhibited unusual activity in attempting to secure new quarters. The matter of securing new homes in Ottawa this year is a much more difficult task than in former years. A shortage of houses exists and with the big early season scramble to secure domiciles increased rents are predicted. Real estate men are of the opinion that one thousand new houses are required every year to keep pace with the increase in population. Since the war began very few residential buildings have been erected, and consequently the local demand for building lumber stock has been practically nil. The high rate of interest and the increased cost of building material and labor are the chief factors given by the contractors for not pushing building operations. They maintain that, at present prices, rents would not be sufficient to give them a fair return on the capital invested.

During the periods of extreme cold which prevailed from time to time since the year began McLachlin Brothers, Arnprior, allowed the people of the town free access to their large slabwood dump.

Charles Taylor, manager of the Gordon Lumber Company, Cache Bay, was recently bereaved through the death of his brother, Sergeant George Taylor, who was killed in action February 15. Sergeant Taylor had been in the trenches for about two years.

Mr. George Lachapelle, watchman of an Ottawa lumber plant, had a narrow escape from death when his home was recently destroyed by fire. His adopted daughter Cecelia perished. In attempting a rescue of the child Mr. Lachapelle was badly burned.

Make Use of Rich Wood Resources

The Ontario Government is placing at the disposal of the municipalities of the province a million cords of hardwood. This will be used to relieve the fuel famine, which, it is expected, cannot be averted next winter unless there is some radical change in the matter of coal mining, production, and distribution. The wood is located in Algonquin Park, within a few miles of the railway, and this immense fuel reserve can be tapped without in any way injuring the park, according to an announcement made to a large deputation which recently waited upon the administration. Hon. G. H. Ferguson, Minister of Lands, Forests and Mines, stated that estimates had been prepared showing that wood could be cut and distributed in Hamilton, Toronto, Ottawa, and other places at about one-half of the present prices pre-

vailing, and the government was giving the wood free. The cost, laid down in Toronto, would be from \$6.50 to \$7.50 per cord.

Although a great deal has been heard about peat bogs, and the suggestion made that they should be appropriated, it was pointed out that the municipalities would do well to turn their attention in other directions for the present, as peat could not be produced in sufficient quantities to give any material relief by next winter. A large sum will likely be placed in the estimates this session for conducting the work of investigation, while the best methods available are being enquired into by experts so far as the manufacture of peat is concerned. All this will not be completed in time to save the situation next winter, and in the meantime it is urged that the commodity nearest at hand should be reverted to, and that is hardwood.

Personal Paragraphs of Interest

Captain H. W. Racey, Montreal, formerly of the Canadian Foresters, and now of the Engineers, is home on a short leave of absence.

Alf. Fitzpatrick, of Toronto, superintendent of the Reading Camp Association, is spending some time in the Western provinces visiting the different lumber and other camps.

Mrs. George A. Grier, widow of the late Mr. George A. Grier, founder of the firm of G. A. Grier & Sons, Ltd., Montreal, has donated a motor ambulance to the Montreal General Hospital.

Major J. I. Hartt, M.P.P., of Orillia, Ont., who recently returned from two years' overseas service with the Canadian forestry battalion in France, was elected grand master of the Grand Orange Lodge of Ontario West at the late annual session in Chatham, Ont.

H. J. Cooper, sales manager of R. Hoe & Co., saw manufacturer, New York, spent a few days in Toronto and other cities recently. Mr. Cooper reports that the outlook for business during the coming season is exceptionally bright, and his firm is very busy at the present time.

Lieut. H. R. Reed, of Toronto, who recently returned from the front, spent some time working with the French army in France in construction work. He says they had a well-equipped sawmill at two points just back of the line and it was operated efficiently all the time cutting mine protectors and dimension timber for definite military work.

Dunfield & Co., Ltd., of Halifax, N.S., lumber merchants, have opened an office at St. John, N.B., in the Lake of the Woods Building No. 8 Market Square. Mr. H. C. Heans, formerly of George McKeen & Co., has been appointed manager of the New Brunswick office. Dunfield & Co., Ltd., were one of the largest exporters of lumber in Nova Scotia in 1917.

J. M. Goodall, for many years general superintendent of the Toronto Parks Department, died recently, in his eighty-third year. He was very proficient in landscape architecture and for a long period was city forester in Toronto. He established the city nurseries and added to the beauty of Toronto by having nearly forty thousand trees planted in the streets and parks. One of his early achievements was the designing and superintending of the making of Geneva Park, Lake Couchiching, for the Northern Railway Company. The park was made out of the primeval forest.

Irving R. Todd, who resides in Milltown, N.B., and is a former widely known and highly respected lumberman in New Brunswick, has been appointed a member of the Canadian Senate, succeeding the late Senator Gilmour. His selection as a member of the Upper Chamber is receiving general endorsement from the press, irrespective of party, and it is announced in this case that the office sought the man and not the man the office. It is also learned that Hon. Mr. Todd accepted a senatorship only on the assurance that he was desired at Ottawa because he was capable of rendering good service to the country.

Worthy Object of Woodlands Section

The organization of the Woodlands Section of the Canadian Pulp and Paper Association is another progressive step on the part of that body. The new Section starts off with an encouraging membership and worthy objects in view. Among these are to stimulate interest in more economical and efficient methods of production and utilization of raw materials for pulp, paper and lumber companies, and to provide means for the interchange of ideas amongst its members and to encourage investigation of woodlands' problems. The membership is divided into two classes: those who are entitled to vote and associate members who do not enjoy that privilege. Among those eligible are anyone who occupies or has occupied an executive woodlands position in a pulp, paper or lumber industry, or anyone occupying a subordinate position, who has had a satisfactory technical education or even those who have special qualifications and experience. The annual fee is \$3, and for non-associate members \$2. The Woodlands Section intend to hold at least two meetings annually.

How to Saw Frozen Timber

It is Unwise to Attempt Work With the Speed Attendant Upon Summer Operations—Give Saw Every Inch of Feed

This winter there is bound to be more sawing than is usually the case. Stocks at the mills are broken and the government is calling for special stock in no uncertain voice, says R. C. Liebe, of Goldsboro, N.C., in the "American Lumberman." To produce this stock and get it out the yards, a good deal of frozen timber will have to be sawn. There is no more trying ordeal for the band saw, the pocketbook of the sawmill owner, the temper of the filer, and everybody concerned than the test of sawing frozen timber. Pine timber that has frozen, standing in the woods, is just about as difficult to saw as any other species. To it no longer may be applied the phrase "soft as pine;" instead, "hard as hickory" is far more fitting. Anyone who has ever tried to saw hickory on a high-speed pine mill will never forget the results or repeat the experiment if finances are to be considered. Therefore, one of the first things to do is to impress upon the sawyer that it is foolish to attempt to saw with the speed attendant upon summer operations. Lowering the speed of the band mill helps greatly in sawing frozen timber. Also, longer spaces between the saw teeth have the same effect, and the filer who remembers this saves himself a lot of trouble.

Pine mills are all of the high speed type, and most of the saw teeth are spaced $1\frac{1}{2}$ inches, the distance that is best suited quickly to chisel out the sawdust under a fast feed. When a fast feed is employed, the gullet is sufficient to hold all of the dust that is dug out of the log until the saw is through the cut. However, the gullet must be the right size, for if the feed is too fast or is crowded too much, the gullet becomes filled with dust before it is through the cut, and as some of the sawdust must be dumped out to make room for the balance, the saw is crowded to one side, causing "snaky" lumber. Filers must take care, however, not to grind the gullets too large, as the short spacing will allow only so much dust room without weakening the strength of the teeth and causing them to lead, break, and bend. The writer filed for hardwood export mills for twelve years before ever filing a saw to cut pine. During that time $1\frac{3}{4}$ and 2-inch spacing between saw teeth was used, 45-foot circle saws, at a speed of 8,000 feet per minute. Most saws cutting pine are 32-foot circle, have shorter spaces between the teeth, and run at a speed of 10,000 feet per minute. Thus, it is easy to see that there is a considerable difference. Take a pine log and try to saw it in a hardwood mill by employing the ordinary fast speed practice and the result is a failure. Attempt to saw hardwood in a pine mill in the same way and another failure results. That is, saws and methods of cutting are different. Now, when pine timber is frozen, for all practical purposes, so far as sawing is concerned, it becomes a hardwood, and the practice that is usually followed in sawing pine may no longer be followed with good results.

In order to fix a pine mill to saw frozen timber, cut down the speed of the mill one-third; narrow down the swages on the saws; run a 32-foot circle tension saw from 12 to 8 inches in width; see that there is plenty of hooks, and round out the gullets nicely to keep the dust whirling. Above all things, cut out too great crowding of the saw.

Care should also be taken to use the log pond to the best advantage. The logs should always be as well soaked in water as possible before sawing, as this takes the frost out of them and makes it that much easier for the saws to cut. Care, therefore, should be taken to dump the logs in the pond behind logs that are already in it. There are very few ponds that will not hold enough logs for a day's sawing, and so if care is taken to see that logs are dumped in behind those already in the pond, a great deal of the frost can be thawed out before it is time to saw them. When the sap is once thawed out, the heart of the log is not nearly so hard to saw.

The writer is a strong advocate of the "more and better lumber" idea. It is a filer's and a sawyer's duty each day to try to get a good cut and improve the cut both in quantity and quality, but it is poor judgment to slash good logs into miss-cuts and slabs to increase the scale of the cut. Millmen should get every foot out of the rigs that is possible, but should always see that the lumber is good. Sawyers should give the saw every inch of feed that it will take and still make good saleable lumber. Slicing logs up is a bad practice, for timber is too valuable to slab or miscut; 5,000 feet of nicely sawn lumber is far more valuable than 10,000 feet of miss-cut stuff. It does not take long, nor is it difficult to prepare a mill to cut frozen logs, and it pays well. It will insure the lumber that is sawn being satisfactory, and there will be no back-kicks on the men that produce it. No matter how good a filer may be, and how carefully he may prepare the saws to cut frozen timber, his work does not bring results unless preparations are also made outside of the filing room to do winter sawing. No matter how well the filer may shape up his saw to cut frozen

logs, if the saws are crowded too much good lumber cannot be produced. It is a mighty good idea for a filer to go over each saw once a day to make sure that no bad lumber can possibly result from the saw's condition. Then, if things do not go right, the trouble must be looked for in the mill or carriage. It will prevent his being made a scape-goat in case things do not go right and poor lumber is produced. The writer finds that during the freezing season a mill should be lined perfectly square with the track instead of leading in slightly, as it tends to overcome the "going" in the log that is so common.

What Western Forests Mean to Posterity

Regarding the proposition heard every now and then that the timber lands in the prairie provinces should be placed on the same basis in respect to ownership as those of the older provinces, the Canadian Forestry Association has come out point blank against the project. It is emphasized that such a course would not, as some persons might suppose, constitute any immediate source of revenue to the provincial treasuries, and the provincial subsidies now paid by the Dominion Government to these provinces would, in all likelihood, be forfeited automatically. These subsidies are paid as compensation for Dominion control of the natural resources, amounting to—Manitoba, \$409,007; Saskatchewan, \$562,500, and Alberta, \$562,500. The fact must also be remembered that the ownership of the western forests is a financial liability to the Dominion Government, and that the entire income from them does not equal the total outlay for protection and improvement.

The Canadian Forestry Association also dwells pertinently upon the fact that the western forests as they stand today are of immense value to the settlers in the neighborhood of the Reserves, who get practically free lumber. They support numerous lumber industries and give invaluable aid to the coal mines with pit props, and to the irrigation enterprises with watershed protection. One must bear in mind, however, that the population of the West is only in its infancy, that the future will place a value upon the forest possessions incalculably greater than does the present generation. The population of the New Canada of a few years hence will require abundant and cheap wood supplies even more than the people of 1917. For every tree maturing in 1930 or 1950 there will be an important use and an eager market. The province that possesses a near-at-hand wood supply will outstrip the province in which neither care nor foresight has been exercised in its growing forests.

To all informed students of the situation the question to be settled is not who shall administer the forests of the three prairie provinces, but whether any authority, save the Dominion Government, would be willing to put up the money to do the job at all. It is not a matter of selling timber and securing nice profits for the public treasury, but of growing the timber, of overtaking the gross damage of repeated forest fires. It is not a matter of cashing in on some of the "inexhaustible" resources, but of stopping the exhaustion, not of extracting financial fillips for the present, but of laying a broad foundation for the necessities of the future. This is something of what is meant by "control of the forest resources of the prairie provinces." And it is at the same time substantially opposed to what the platform exponents of "provincial ownership" sometimes would wish their constituents to understand.

Millions for Development of Water-Powers

The Legislature of Quebec has just authorized an expenditure of approximately four million dollars for the development of provincial water-powers. The Quebec Streams Commission, of which Hon. S. N. Parent is chairman, has been authorized to acquire certain property for the operation, maintenance, rebuilding, and utilization of the dam on the River St. Maurice at La Loutre.

The property to be acquired is the railway from Chaudiere to La Loutre, with sidings and rolling stock; the boats used for purposes of transportation between Sanmaur and Chaudiere, and the improvements made in the River St. Maurice between the two points above mentioned; the loading and unloading facilities at Sanmaur, Chaudiere, and La Loutre, including the sidings at Sanmaur; the hydraulic power plant at La Loutre; all the houses, storehouses, and camps; the saw-mill and the machine repair shop, with all its machinery, at La Loutre; machines, tools, winches, derricks, etc., at La Loutre; the necessary lands.

The acquisition is to be made at a price of not more than \$500,000 and subject to certain conditions. For the completion of the St. Maurice River dam works the sum of \$1,500,000 authorized in 1912 is raised to \$2,500,000. Another bill just passed provides for the storage of waters of Lake Kenogami, one of the branches of Lac St. Jean. Storage dams will be erected in Lake Kenogami and in the Chicoutimi and Au Sable Rivers, at a cost not to exceed \$1,800,000. Other measures were adopted increasing the amounts of water storage on the St. Francois River, the St. Anne, the Savanne, and other places.

The Varied Problem of Wood Utilization

Canada's Forest Products Bring Income of \$200,000,000 Annually—Growing Need for More Detailed Knowledge Regarding Timber Wealth of the Dominion

By Dr. John S. Bates, Supt. Forest Products Laboratories, Montreal

My first intention was to survey the whole field of forest products as briefly as possible. However, this has already been done in a paper "Present and Possible Products from Canadian Woods," read by me before the Canadian Society of Civil Engineers, reprints of which are available for anyone interested. It seems unnecessary to repeat this detailed discussion, and I shall, therefore, touch on only a few points which stand out in prominence before those who are concerned with the welfare of our forests.

We must not lose sight of the significance of wood in Canada's list of natural resources. Forest products are next in value to agriculture, the income being something over \$200,000,000 annually. In studying Canada's exports we find that the pulp and paper industry now brings into the country a larger income than any other manufacturing industry with the exception of munitions, and is an outstanding example of an export business yielding real money in distinction from war business largely based on domestic credits. At the present time it is out of the question to ship large quantities of wood products across the water, and we see Europe being drained of its limited wood supply to feed the war machine. In the future the Empire will turn to Canada for its supplies, particularly for the valuable softwoods which fortunately predominate in this northern climate.

In considering the economics of forest products there are certain methods of utilization which are the main units and which are self-contained, such as lumber, pulp and paper, and wood distillation. The tendency has been to start with round wood from the forest for each process, so that control can be more certain and each plant can be independent. The possibilities for economy by co-ordinating one industry with another are becoming more apparent every day. The expansion of the main industries will bring about these new methods by every reason of their size, so that there will be enough wood waste at one centre to serve as raw material for a by-product plant. Already the kraft pulp plants in the east convert large quantities of slabs and edgings; the sawmill waste in British Columbia offers opportunities for processes outside the range of the lumber industry. The practical requirement is that utilization must yield a financial profit. The close utilization in Europe is out of all proportion to Canadian conditions, and we must wait for an increase and spreading of population. The rising cost of wood in Canada is in many ways a blessing, and it is only right to place a real value on wood as it stands in the forest. As more and more by-product industries become feasible, the utilization of waste will bring true economy by throttling the drain on our forest supply.

Permanent and Ever-Expanding Forest

Looking at the problem in a broad way, the protection and reproduction of the forest overshadows all other duties. The most effective utilization of the wood and waste that is now coming out will not counterbalance the loss of forest wealth, and the aim should be to build up in Canada a permanent and ever-expanding forest. It is to the foresters, the lumbermen, the federal and provincial governments that we must look for the carrying out of this policy. The public may well take a renewed interest in fire protection, forest reserves, tree planting, more rigid cutting laws, and measures for natural reproduction. Conditions are favored by the ownership of such large proportions of the forest areas by the governments.

Logging is such a definite proposition each year that it is hard to change the methods so long in use. We know that about 25 per cent. of the tree is left in the woods in the form of limbs, tops, stumps, etc. In general it is not likely that new processes will go far toward saving this material, because there is already so much by-product wood within easier reach at the manufacturing plants. Burning of slash in the wet seasons appears to be the main duty at present in order to curb forest fires.

The lumber industry has had a long history in Canada, but now faces new conditions. The manufacture has been so simple and the competition so light that lumbermen have not been forced to introduce radical changes. Although the plants are widely scattered and the number of specially trained men is small, it is not going too far to say that the lumbermen must get together for an intensive study of their industry. No outside forces can accomplish what they themselves can do by comparing the mechanical and physical properties of the different woods, extending the use of a species where this is legitimate, eliminating decay in lumber yards, kiln-drying and finishing woods to meet special requirements, selecting timber on the basis of quality and welcoming the co-operation of industries and experts for

the conversion of waste. Sawmill waste amounts to about forty per cent. of the original tree and consists of slabs, edgings, trimmings, sawdust, bark, shavings, seasoning waste, shaping waste and culls.

There are many chances for extending the by-product manufacture of small wooden articles by mechanical processes. A new development in Canada is the chipping and baling of sawmill waste for shipment to chemical pulp mills. Spruce and white pine have been the mainstays of the lumber industry; Douglas fir is now coming to be recognized as Canada's foremost structural timber, and the immense supplies in British Columbia will be a source of great wealth.

The pulp and paper industry is enjoying a development which is without parallel among the wood-using processes of the country. The export figure is now over \$50,000,000 annually, being half of the total export value of all forest products. The restrictions on pulpwood export, and the duty-free market for pulpwood and paper in the United States have rapidly increased manufacture within the country and the ratio is improving every year. From the simple groundwood process more and more attention has been turned to unbleached sulphite pulp, bleached sulphite pulp, kraft pulp, newsprint paper and high-grade papers. The production of soda pulp is still only 21 tons per day, while the imports amount to something like \$500,000 per year, and there seems to be an opening for the utilization of some of the poplar which troubles the forester in connection with forest reproduction. Waste sulphite liquor still carries large quantities of wood material down the rivers, but serious attention is being given to the possibilities of recovering ethyl alcohol, tanning solution and binders. Products of surprising variety can be made from kraft pulp, and it is likely that paper twine, paper textiles and leather substitutes will be on our list of forest products in due course.

Destructive Distillation of Hard Woods

Among the distillation processes the destructive distillation of hardwoods is of main importance in Canada. It is gratifying that manufacture is carried beyond the stage of crude products, and that the specially refined and derived products are made in Canada for both local and export trade. The process has been vital in that it has supplied practically all of the methyl alcohol and acetic acid, so essential in the scheme of modern civilization. The war has given a new stimulus by reason of the tremendous demand for acetone as a solvent in the manufacture of cordite, the well-known British propellant explosive. This same pressure has introduced in Canada new chemical processes for acetone and acetic acid which may have a serious effect on the distillation of hardwoods. While hardwood distillation is rather crude, it survives by reason of the variety of useful products—wood alcohol, methyl acetone, formaldehyde, acetic acid, acetic anhydride, acetone, acetone oils, charcoal, creosote oils, etc. An important development is the Seaman process, now established in the United States, for the distillation of hardwood sawdust and finely divided mill waste.

In closing this brief discussion of a large subject, I beg to refer to the work of the Forest Products Laboratories of Canada. As you know, we are concerned with the varied problem of wood utilization. The fundamental basis is a study of the mechanical, physical and chemical properties of Canadian wood species. There are also investigations of processes, and it is clear that many field studies will have to be made. In addition to the present Divisions of Timber Tests, Timber Physics, Pulp and Paper and Wood Preservation, there is large scope for a Division of Lumber to properly serve the lumber industry in a technical way. It is impossible to talk of expansion under present war conditions, but it is right to plan. In playing a part in the better utilization of Canadian woods it is clear that we must have the full co-operation of foresters, as well as lumbermen and all others concerned with the handling of wood. There is a growing need for more detailed knowledge of our forest resources. Methods of utilization now known could, in many cases, be applied if there could be more discussion and a closer touch between woodsmen and process men. Foresters have raised the problems of punky poplar, balsam, fir and birch, and the utilization of hardwoods in connection with reproduction of softwoods. These are difficult questions, but some action may follow from a better understanding of the situation. There is some indication that the large proportion of soluble matter in the decayed poplar may yield products of value. An attempt is being made to grind hardwoods for mechanical pulp.

These are but a few of the suggestive ideas that come to mind in connection with forest products.

Menace of White Pine Blister Rust

The Outlook is Serious and Proposition of Protecting the Timber is Important at the Present Time

"The Menace of Our White Pine" was discussed before the Royal Canadian Institute, Toronto, recently, by Prof. J. H. Faull, who occupies the Chair of Botany in the University of Toronto. He stated that the blister rust threatened to deprive Canada of one of its greatest sources of wealth. It is a comparatively new pest and was introduced into America from Europe about twelve years ago.

Prof. Faull urged the appointment of a commission representative of the lumbermen, nurserymen and the government to have full control of the situation. On the outcome would depend the reforestation policy of Ontario and the Dominion, and the health, productivity and perhaps existence of our valuable, commercial white pine forests. The outlook is serious and the proposition of protecting our wealth of pine, Prof. Faull added, was one for the lumberman, the forester, the pathologist, and local agencies.

The white pine blister and its destructive consequences, oddly enough, is the result of a strong move for reforestation which swept Canada and the United States a little more than a decade ago. The slogan of this movement was, "Plant white pine," which is the basic tree of the Canadian forests, and the immediate result was that the stocks of seedlings in the hands of American nurserymen were depleted. Some years previous a reforestation movement had swept through Europe, and large stocks of white pine seedlings had been imported from America. This blister rust disease had always existed in the Ural mountains, but its ravages there were not serious. When white pines were set out in Europe, however, the disease became very virulent and attacked practically all the imported stock. When, during the reforestation movement in Canada and the United States, American stocks of seedlings became depleted, the nurseries sent buyers to Europe for the purpose of securing enough young trees to meet the demand in America. The Europeans were shrewd enough not to inform the buyers of the ravages of the blister rust, and large stocks of seedlings were imported and distributed throughout the white pine districts.

The disease requires about three years before it begins to manifest itself by a swelling of the limbs of the tree, which take on a sickly, yellowish appearance. Once established, the fungus progresses down the branch or stem year by year. Each spring there arise from the swollen, discolored tissue invaded during the previous year numerous pale orange or whitish blisters filled with countless spores. About four years ago the prevalence of the disease in our Canadian forests was remarked, and since then a vigorous campaign has been carried out in Ontario and Quebec to eliminate the new pest.

The pest requires two hosts to complete its life. It develops first upon the leaves of currant or gooseberry bushes. In these bushes it attacks only the leaves, coating them with a reddish matter, from which the name rust arises. It destroys the leaves and so works havoc with these bushes. From the bush it may be carried by the wind to a white pine. But it cannot pass from one pine to another save through the intermediary of a current or gooseberry bush. This affords a simple method of combating the disease, elimination of current or gooseberry bushes in districts bordering upon white pine forests. In 1915 a survey made in Ontario showed that the disease was most prevalent on the Niagara Peninsula. It was also found in the vicinity of Bowmanville, Guelph and Dutton, and an affected area was discovered close to the Quebec line in the northern part of the province.

The life-history of the pest is as follows: On the pine—Attacks only five-needled pines, on which it lives perennially in the bark of the limbs and stem; it produces cankered areas with discolored swellings; limbs or stems are girdled and killed, seedlings are killed rapidly and adult trees more slowly; spores procured in early spring from canker blisters may infect nearby currants, but not pines again.

Canada Will Take An Inventory

Taking an inventory of what one possesses is a wise and discerning procedure in business practice. Founded on a proper basis and with a fair and just appreciation of values, it enables a business house to know exactly where it stands. If the principle is sound and applicable in mercantile affairs, it should operate with equally satisfactory and beneficial results in national undertakings. With the object of giving effect to the declared policy of the federal government, in mobilizing the resources of the nation for the prosecution of the war, a sub-committee of the War Committee of the Cabinet has been formed, to be known as the Canada Registration Board. The aim is a worthy one, and provides for a maximum contribution in men, food-stuffs, munitions, and ships. The personnel of the board represents live and aggressive business men, and, in addition to a tabulation or registration of man-power, extensive co-operation is the object in view. Authority is given to take an inventory of such industries of

Canada as the board may determine, with a view to having accurate knowledge at all times of the extent to which the various classes of labor are employed, hours, wages, etc., and to formulate plans whereby the eligible men and women of the Dominion may be made more readily available for such industries as are most essential for the prosecution of the war. This is certainly a progressive step in the interest of conservation and the development of efficiency to the highest point.

Properties of Canadian Douglas Fir

Forest Products Laboratories Find the Coast Type is Stronger than the Mountain Type

One of the most useful parts of the work of the United States Forest Products Laboratory at Madison, Wisconsin, is the testing of all the different native woods, so that architects, engineers, builders, and manufacturers may know just what are the best uses for each particular kind of timber.

The Forest Products Laboratories of Canada, established about three years ago, under the Forestry Branch of the Department of the Interior, have taken up this work as one of their first duties. The tests do not duplicate those of the United States Laboratory, but, so far as the same kinds of woods are tested, they are supplementary. That is to say, the Canadian organization makes tests which show how far the qualities of the woods grown in Canada agree with the qualities of the same woods grown in the United States, and wherein they differ. Thus there is no overlapping, and the greatest possible amount of information is gained by this method of work on the part of the two organizations.

The regular method of work is to test one kind of wood at a time and to issue a document setting forth these facts. In beginning in Canada, however, it was felt that Canadian architects, engineers, and builders should be acquainted as soon as possible with the main qualities of the leading structural timbers, particularly as to how they compared with structural timbers imported from other countries. The results of this first series of tests was made known in Forestry Branch Bulletin No. 59, "Canadian Woods for Structural Timbers." This bulletin, which showed the high qualities of certain of Canadian timbers for structural purposes, has been widely circulated and has been commended by producers and consumers. Extended extracts from this bulletin have been published in the "Canada Lumberman," and if any readers have not read the document itself, or desire additional copies, they may be had free upon application to the Director of Forestry, Ottawa.

Studying All the Important Timbers

This opening study having been completed, the Forest Products Laboratories of Canada are now studying the important Canadian timbers as rapidly as possible. The strain of war-time, with the special demands it brings, makes this rather a slow process, particularly as thousands of tests of different kinds have to be made on each wood under consideration. The first individual wood to be taken up is Douglas fir. These tests are fully set forth in Forestry Branch Bulletin No. 60, "Canadian Douglas Fir, Its Mechanical and Physical Properties." It has not yet been issued, but it is expected that it will be ready for distribution in a few weeks. It will be sent to a carefully selected list of architects, engineers, builders, and manufacturers, and those who desire to make sure of securing a copy may make application to the Director of Forestry, Ottawa, when it will be sent to them free as soon as issued. This bulletin by means of carefully prepared texts, tables, diagrams, and illustrations explains the important qualities of Douglas fir and what are its strong points and its weak points. The material tested was taken from three localities—from the east slope of the Rocky Mountains; from the west slope; and from the Pacific Coast. It is impossible to give in a paragraph the conclusions arrived at in this bulletin of about 85 pages, closely packed with valuable material, but a few leading points may be given:

1. Tests show that Douglas fir grown in Canada and that grown in the United States may be considered to be of practically identical properties.
2. Coast type Douglas fir is stronger than the mountain type of the same species.
3. Material from different parts in the same tree varies considerably, the stronger wood being on the outside, the weakest at the heart.
4. Strength and proportion of summer-wood vary in the same manner—that is to say, the greater the proportion of summer-wood the greater the strength. This is a most important point, because it shows that it is possible in the case of Douglas fir to formulate a grading rule based on the number of growth-rings per inch. Such a rule, for instance, might specify that timber to be graded as first class must have not less than so many growth-rings per inch.
5. The seasoning of Douglas fir greatly increases the strength when moisture content has been reduced below the fibre saturation point.

WANTED & FOR SALE DEPARTMENT

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line (14 agate lines make one inch.) \$2.10 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word, net. Cash must accompany the order. Minimum charge 50 cents.

Advertisements must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

Wanted-Lumber

Wood and Sawdust Wanted

100 cars slabs and sawdust for spot cash soon as loaded. Address Box 676, Canada Lumberman, Toronto. 4-7

WANTED—Slabs, hard or soft wood, 4 ft. lengths, or mill run lengths, state which. Also state kind, quantity, price, shipping point, what railway and when can ship. James E. Gardner, Niagara Falls, Ontario. 6-6

Basswood Wanted

No. 2 Common and Mill Cull. Winter cut preferred. Apply Firstbrook Brothers, Ltd., Toronto, Ont. 8-t.f.

Logs Wanted

Wanted first-class Ash, Birch, Basswood or Poplar Logs, 17 in. and up in diameter. Address Robbins Veneer & Lumber Co., Elliott Square, Buffalo, N.Y. 6-6

WANTED—One car of 3 in. No. 1 and Clear Spruce; two cars of 2 in., also some 1 in., 1 1/4 in. Will take it green or dry.

EDWARD C. BRADLEY,
Gerke Building,
Cincinnati, Ohio.

5-6-7-8

Pine, Etc., Bolts Wanted

Pine, Basswood, Whitewood and Spruce Bolts, eighteen inches long. Quote F. O. B. Bothwell, Ontario.

REID BROS.,
Bothwell, Ont. 4-6

Maple, Birch, Etc., Wanted

We are in the market for Maple, Birch, Elm and Basswood, to be sawn to our order. Spot cash settlements and assistance given to responsible parties.

Address Box 702, Canada Lumberman, Toronto. 6-t.f.

Birch Logs Wanted

Wanted—Prime No. 1 Birch Logs for rotary cutting, 16 in. diameter and up. State price, earliest delivery. Box 675, Canada Lumberman, Toronto. 4-7

LUMBER WANTED—For immediate delivery, several cars Beech and Maple, 2 and 3 inch plump. For future delivery several cars Rock Elm, cut 2 1/4 and 3 1/4 inch. Spring and summer delivery. Quote prices to

Quebec, P.Q. 6-6

Slab Resaw For Sale

For Sale—Very fine Mereen-Johnson No. 24 Slab Band Resaw. Wheels 50 in. for 8 in. blade. Box 692, Canada Lumberman, Toronto. 5-6

For Sale

Very fine 18 in. and 32 in. x 42 in. Cross Compound "Brown" Engine, approximately 400 h.p., built by Polson Iron Works. Has 44 in. x 16 ft. Belt Pulley. Splendid condition. Immediate delivery. Box 654, Canada Lumberman, Toronto. 24-t.f.

Machinery For Sale

75 h.p. also 100 h.p. engine, heavy log jack and chain, Hamilton 3 block carriage, saw frame, 4 saw trimmer, Berlin No. 94 Planer, 12-in. 4 side Sticker, 30-in. bracket saw, shaper, Murray lath bolter, Rogers lath machine. Good condition.

VIGARS-SHEAR LUMBER CO.,
Port Arthur, Ont. 6-9

We Have For Sale

1 Boss Automatic Shingle Saw, in good condition.

1 14 x 14 Ideal, high speed engine, Goldie & McCulloch make, requiring slight repairs, but in running order, as we last used it, before changing to another source of supply. This engine is particularly adapted for saw mill work, the high speed of the engine enabling it to keep up a constant momentum and offsetting the drag of a saw going into the cut. This engine has an outside bearing on the belt wheel end of the crank shaft.

1 Double Wood Splitter.

1 Double Edger, Seury make.

1 Saw Mill Carriage, 2 head blocks, boss dogs, rack, and Simon feed and gig works.

1 Single Cylinder, box board printer, Waterous make.

The Wm. Cane & Sons Co., Ltd.,
Newmarket, Ont. 6-9

Wire Rope

11 pcs. 1 1/2 in. A. S. & W. Plow Steel, 6 x 19, hemp center. 670 ft. lengths. Practically new.

1 piece 2 1/2 in. Cast Steel, 2,200 feet long. Good for main cable.

ZELNICKER IN ST. LOUIS

Get Bulletin 230—68 bargain pages. 6-6

FOR SALE

One Union Iron Works Upright Resaw, 8 ft. wheels, with drive pulleys.

One Improved Mershon & Co. Horizontal Slab Resaw, 5 ft. wheels, for 8 in. saws. Used only three years.

One Tug Smoke Stack. Size 34 in. x 23 ft., 10 gauge iron.

One Three Saw Edger, Waterous make.

One Smoke Stack, 26 in. x 73 ft., with 7 ft. Spark Catcher, 10 gauge iron. From 40 ft. to top 12 gauge iron.

One Timber Surfacers, 30 in. Cylinders, with 14 in. Side Heads.

McGregor & Gourlay Shop No. 8461, Cut No. 202.

One two Spindle Shaper. McKechnie & Bertram make.

Two sets of Prescott Steam Set Works.

The Pigeon River Lumber Company, Limited,
5-8 Port Arthur, Ont.

For Sale

One tandem compound Goldie & McCulloch steam engine, 135 h.p. rating.

One Laurie Engine Co. 13 x 30 Corliss engine.

The above engines are in A1 condition.

We have also a large amount of 4, 6 and 7 in. wrought iron steam and exhaust pipes, complete with valves and fittings. The price F.O.B. cars will be quoted to those interested.

Apply H. M. Miller, Water, Light & Heat Commissioner, St. Marys, Ontario. 3-6

Planer and Resaw For Sale

One Double Surfacers endless bed planer, 12 x 26, Clark Demill make, as good as new. One Jackson & Cochrane Band Resaw, 56 in. Box 70, Sarnia, Ont. 5-6

Belting For Sale

We have a large quantity of Second-Hand Rubber and Leather Belting in all sizes and plys up to 24 inches in width, which we can sell at interesting prices. Send us your requirements. N. Smith, 138 York Street, Toronto, Ont. 6-11

Boilers For Sale

Four Boilers in A1 condition, 12 ft. x 4 1/2 ft. with 50 3/4-inch Tubes, Double Rivetted Butt Straps, Dome and Safety Pop Valves. 115 lbs. Government Steam Test.

Timber Limits For Sale

FOR SALE—The actual owners wish to get into touch with actual buyers. Virgin timber; average 27 M. to the acre; on a river; close to tire water; inside Vancouver Island. Fir, spruce, yellow cedar, red cedar. Coast hemlock, balsam. Exceptionally good logging. Held under perpetual licenses. Price on basis of one dollar per M. Address: The Sunset Mills, Limited, Nelson, British Columbia. 6-10

TOWNSHIP OF FOSTER

36 square miles splendid body mixed timber; pine, hemlock, birch, spruce, elm, ash, maple, pulpwood, cedar poles and ties, cordwood. Roads cut, streams improved. One of cheapest operations on North Shore. Supplies landed on limit from Algoma Eastern Railway and C. P. R. within hauling distance. Ideal portable mill operation. Suitable for furniture manufacturers. Cheap railway rate to Little Current for water shipment. No time limit for cutting all classes of timber. Apply, R. B., Box 682, Canada Lumberman, Toronto. 4-8

Efficiency in Handling Lumber

One of the last departments to take up efficiency methods is the yard department; the internal movement of the lumber from the chains to yard and finally to cars for shipping. The most common method is the mule or man power, which is expensive, slow, inconvenient, and uncertain.

These methods are slowly giving way to more modern methods, principally to the industrial electric tractor. Lumber tractors of this type have been used in the movement of freight at railroad stations, factories, mines, United States Government, etc. They are no experiment, having been tried out for many years.

The handling of lumber lends itself better to the installation of this apparatus than any other class of freight, for the reason that there are large loads to move, uniform units, quick loading and unloading, good hard runways, etc.

The cost of handling lumber varies at different plants. It is reasonable to assume that one tractor will displace three mules and two men and effect a saving of \$7.25 per day on a \$2,500 investment.

It would be well for the progressive lumberman to analyze his yard costs so that when he does figure on motorizing, he will have the facts to go by. He should know the cost of maintaining his mules, what their average life is, what they cost, what he can feed a mule on now and the cost per 1,000 feet of lumber moved. Separate your mule costs from your other costs. Do not include the loading of the dollies, the stacking, etc., as these are items that remain the same whether mules or tractors are used.

Tram costs will be less with electric tractors and rubber tires.—The Southern Lumberman.

Review of Current Trade Conditions

Ontario

The transportation problem is improving somewhat according to advices received by the various lumber companies. The embargo on the C.P.R. from Smith's Falls and points west to Toronto has been lifted, while one on the G.T.R. at the frontier in Ontario has been removed. With the advent of warmer days, shipments of carloads are going forward a little more satisfactorily. A leading member of the trade stated that, in the Parry Sound district, he did not think woods operations would result this season in more than 50 per cent. of the cut last year, while 1917 was considerably behind that of the previous year.

Recent advices from Buffalo and other border points say that embargoes are still on to quite an extent in that territory, but weather conditions are improving, and firms look for some of these embargoes to be lifted very soon.

Building prospects do not materially strengthen, but all retail lumbermen look forward to a very fair business. Last year there were no indications of any great volume of trade, and yet most concerns report that results on the whole were ahead of 1916.

There is still considerable difficulty getting out shipments and making deliveries at many points. Late March storms have not tended to improve the situation to any material extent. The trend of prices in every line is upwards, and the contributing causes are so well understood that no extended reference is necessary. Wholesalers are looking into the figures they will have to pay for the 1918 cut of the mills, which will soon be in operation. No large transactions are reported, owing to the desire to await more settled conditions and to ascertain more accurately the market values and the shaping up of events.

Stocks in many instances are low and marketing operations have in not a few cases been curtailed, for, as a leading member of the trade expressed it, "What is the use of taking orders when you cannot guarantee deliveries under any circumstances? We did not during February get more than one-tenth of the cars that should have been placed at our disposal. Labor and other hampering conditions have made the trade anything but a paradise on earth during the past winter. We thought that the congestion of 1917 was bad enough, but the present tie-up had it beaten to a standstill."

It is hard to speak with respect to values, and the demand in many lines is spasmodic. The requisitions for crating and commercial uses are very satisfactory, and a large amount of repair work and necessary alterations will be carried on, but, so far as new buildings and other undertakings are concerned, it is too early yet to speak with any degree of assuredness, and, in the meantime, builders and contractors are feeling their way. In the Eastern States business also continues quiet in all building lines, but there is a fair demand for white pine for manufacturing purposes.

Eastern Canada

There is little new to report in the Eastern situation. Conditions on the whole remain unchanged, and, while some embargoes have been removed and shipments are going ahead a little faster, March storms occurred to tie up traffic again. The return of Canadian cars from the United States is slow, and the principal topic of discussion is the congestion of traffic. All kinds of cars are being used to haul lumber, and routing is a matter of great difficulty, as where one road may be able to handle a shipment to a certain point, there is no assurance that another line will be able to carry it on. It is hoped from this out that conditions will improve and, with the movement coincident to spring, one of the greatest drawbacks of the trade will be gradually overcome.

Mills are getting ready to start operations next month, and another point of interest is that regarding prices. It is expected that quotations on all lines will go higher, owing to the decimated woods operations, the shortage of labor, and the high cost of operation and maintenance. Larger figures must be obtained or there will be no profit on cutting during the present season. If shipping facilities could only be provided there would be lively business in the English market, where stocks are low.

There is not much demand for building material as yet, and conditions point to a rather slow opening up of trade in this line. Builders and contractors are inclined to hang back and carefully weigh matters before launching out. The high cost of materials and labor is the chief deterrent. One firm reports that so long as the war continues there is every indication of a steady advance on many kinds of lumber, but that there is a lack of uniformity in prices, and producers are several dollars a thousand apart in their ideas of values. It is rumored that, while buyers have been out canvassing the situation regarding

the sale of 1918 cuts, there is no inclination to sell. Manufacturers prefer to wait a while yet until things assume a more settled basis. Several woodworking plants in the East have secured large contracts recently for shell boxes, which will keep them employed steadily until June. It is reported that no further contracts will be awarded for some weeks. Sash and door factories are only fairly busy, and many are making up stock goods.

United States

The hardwood market is, on the whole, brisk, and very good prices are being obtained. The number of embargoes in the East is being slowly removed, and those at other points are being lifted. This has resulted in more enquiries. Firmness characterizes the white pine market, but it is announced that shipments from Canada are not coming forward either promptly or in the customary volume. This is caused by the fact that cars from the Dominion cannot be sent into the United States, all deliveries having to be made in United States cars. This, of course, retards the movement considerably. Yard trade is below normal, but industrial demand is good.

There is a ready requisition for spruce for many purposes, but the chief trouble is in the matter of deliveries. It is also reported that there is difficulty in getting spruce from Canada, due to the car regulations. The one important event of the past few days has been the inauguration of the eight-hour movement in the camps and also the mills producing cedar, hemlock, spruce, and Douglas fir in Western Washington and Western Oregon. The natural question is, How will it affect production? Will output be speeded up to maximum? It is certain, however, that the cost will increase. The market for Douglas fir is firm, and the government is rushing train loads to Eastern and Southern shipyards. Cypress is in fair requisition wherever it is possible to make shipments.

The government is using a large quantity of hemlock. Shipping conditions have improved, and the price situation helps to move stocks. The normal production level in Southern yellow pine has been passed, and the export trade, especially with South Africa, shows improvement. Prices are well maintained. In Western pines quotations are normal, and every effort is being put forth to increase production. Speaking of the new eight-hour day regulation with Western white pine producers in Eastern Oregon and Southern Idaho the "American Lumberman" says: "Of even more importance is the agreement that no mill or logging camp shall work any shift more than eight hours in one day nor more than six days in one week until further notice. As many shifts as possible can be worked, of course. The point of most immediate concern to all is whether this will make possible the speeding up of production. A sawmill cannot cut as much in eight hours as it can in ten hours when the men are really working, but two eight-hour shifts certainly will cut more than one ten-hour shift. Some of the mills may try three shifts if labor enough is available, though their practicability is doubtful. This leaves only California and Montana with the ten-hour day—for how long remains to be seen. In all the producing sections demand is keen enough, but sales are limited because the stock is not on hand to be sold."

Great Britain

Reports from various centres show no decided changes in the general situation. In native timber the trade is enjoying a fair measure of prosperity, although conditions are far from normal. There is a fair demand for all home-grown woods, but the great trouble is to get delivery owing to the scarcity of labor for felling and transportation. According to advices from Liverpool, a number of timber merchants, who in the past dealt exclusively in imported woods, are going to confine their attention to the cultivation of business at home, so that when trading resumes its ordinary course the probability is that native production will be largely used in conjunction with imported woods for the making of numerous articles in common use, which, in former times, were created entirely of imported stock. The trade in the mahogany market is limited, as supplies are very short. An exchange says that the great effort the United States of America is putting forth to extend her shipbuilding program in order to secure more tonnage for herself and her allies is hardly understood yet by the majority of people. The fact that some 3,000 to 4,000 skilled lumbermen have been sent into the vast forests on the other side of the Atlantic to convert something like 40,000,000 feet of Douglas fir for the construction of wooden ships is a sum total so huge that the ordinary intelligent mind can scarcely comprehend the tremendous amount of shipbuilding work now in progress; but this fact will eventually be seen and

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

"Rush Orders Rushed"

Cleveland-Sarnia Sawmills Co., Limited

SARNIA, ONTARIO

B. P. BOLE, Pres. F. H. GOFF, Vice-Pres. E. C. BARRE, Gen. Mgr. W. A. SAURWEIN, Ass't. Mgr.

fully appreciated when modern equipped vessels are turned out daily from the large shipbuilding yards in America, which are now undertaking this enterprise in the interests of humanity, and with the supreme object of defeating the submarine menace; also to replace the lost tonnage by a larger volume than the world has ever known. When this important factor penetrates the mind of the enemy it will be seen how elusive are his dreams of conquest of this planet and the utter futility of attempting to starve us into submission. Incidentally it will reflect to the credit of the United States lumbermen, as being one of the means in providing the material for the defeat of enemy designs.

The trade in American hardwoods maintains its popularity, in spite of adverse conditions surrounding the delivery of such small quantities of oak, gum lumber, poplar, etc., which continue to arrive here spasmodically, notwithstanding the difficulties in obtaining freight room, shortage of labor, and curtailment of transport. In other words, these woods, although in general use, and in ordinary times quite indispensable in their employment in the manufacture of the arts

and crafts, are in these strenuous times considered to be connected with the term of "luxuries," and their importation is only allowed when opportunity permits.

From Glasgow comes the report that trade in imported timbers is still much restricted, and the prospects for any immediate improvement are not particularly bright. The one source of satisfaction is that any alteration must be for the better. Forward business is only possible under license, and contracting is, in consequence, limited to the more urgent requirements for ammunition cases, shipbuilding, etc. A little more activity has centered round American hardwoods during the week, quite a few sales of oak, poplar, and gum having transpired, chiefly from stocks held in merchants' hands. A few lots of dunnage wood, recently arrived, were also disposed of, prices in every instance ruling firm. Home-grown oak timber of good quality and dimensions is in active request from railway carriage and wagon builders, and also from cabinetmakers, and suitable specifications are commanding high prices.

**SPECIAL REPORTS
ON CONDITIONS AT
HOME AND ABROAD**

General Conditions Show Improvement

Ottawa, March 11.—(Special to the "Canada Lumberman.")—Firm prices and a good demand featured the Ottawa lumber market during the opening period of March. As compared with February the general situation showed improvement; and, compared with a corresponding period a year ago, it exhibited more hopeful indications than in 1917.

The car situation showed some betterment over last month. Embargoes, while they continued to cause much inconvenience to shippers, were easier than five or six weeks ago. Open weather during the end of February and the first week of March helped transportation considerably, with the result that stocks began to move more freely when cars could be secured. The shortage of cars is still the chief concern of most of the lumbering companies.

Only about 15 per cent. of the cars required were available, and much uncertainty existed with shippers as to when they could have them for loading. One company had orders on its books for six months and the stock still awaits shipment. Lumber shippers have hopes that when the Western grain crop is all moved that the car situation will become easier and a more definite basis as regards transportation can be expected.

Aside from the car and embargo situations several members of the trade are doing considerable speculating as to what the manufacturers will charge for their 1918 mill cut. The correspondent of the "Canada Lumberman" was told that some American buyers had exhibited a tendency of delay in placing their orders until they had an indication as to how much the advance would be over the 1917 prices.

There is almost no hope or belief at all that lumber will decline in price. Everybody, from the manufacturer to the retailer, is looking for an advance and wondering how much it is going to be. Prices are almost certain to substantially advance before midsummer. Lumber, dealers says, was one of the last commodities to advance in price, and it is taken that it will be about one of the last to decrease. On the woods operations in the Ottawa Valley for 1917-18 there are no indications that prices should not go higher. The cut of the valley is below that of last year. Labor increased around 100 per cent. and food around 60 per cent. These are the two chief elements in the cost of logging, and it appears that if the manufacturers do not advance their prices considerably for the mill cut this year that they will lose heavily.

Stocks for shell box manufacture continue to grow scarce. The market, from seconds to the lower grades, is not overstocked, nor is there any great surplus of first quality lumber. The principal demand for some time past has been middle and the lower grades, with the result that the stocks were used up and supply and demand caused the prices to advance accordingly. With the middle and lower grades advancing, the prices approached those of the higher grade in undue proportion to quality. This necessitated an advance in the figure for high-grade stock.

Though definite announcement was not made by the Imperial Munitions Board regarding the aggregate number of shell boxes contracted for in the last placing of orders, the "Canada Lumberman" understands the number was in the vicinity of eight hundred thousand. Four Ottawa woodworking plants secured orders aggregating about 250,000 boxes. The new issue of orders by the board should take three or four months, or perhaps longer, for the plants to complete. A former issue of orders around 500,000 boxes took the trade some four months to fill. Mr. Woodhouse, of the Imperial Munitions Board,

stated that the board would not be in the market for further boxes till April or May.

W. C. Edwards classified the early March business as good. Orders and enquiries continued favorable. The chief difficulty was getting cars for shipment. The car situation, while reported by this company to have shown improvement over February, is not yet entirely satisfactory. Many carloads on order are still awaiting shipment from both the Rockland and Ottawa mills. The company was successful in its tender for shell boxes and received an order for 70,000 two-round six inch boxes, which will take about six weeks to complete. The price was so low that Mr. Gordon Edwards said: "It is almost a sin to make boxes at this figure." The woods camps have begun to wind up the season's operations.

The McAuliffe-Davis Lumber Company reported business as being only fair. The demand for building stocks was light. Shipments were reported to be moving more freely. An order for a considerable number of two-round six-inch shell boxes was secured by the McAuliffe-Davis Company. The amount of the order was not announced for publication.

Gilmour & Co. reported the market as being very firm and the demand good. They are of the opinion that manufacturers are not booking orders at present on account of the anticipated big increase in price which, it is believed, will certainly follow the decreased log production in the Ottawa Valley this winter and the enhanced cost of logging operations. Orders increased over February, and, with the improvement in the car situation, Mr. Gilmour looks for a brisk spring market, accompanied by higher prices.

Mr. C. Jackson Booth, sales manager of John R. Booth, stated that the outlook, judging from present conditions, was very unsettled. The woods operations of John R. Booth had been unsatisfactory. The log output, though definite figures are not available, will be considerably below that of last season. The shortage of cars and the intermittent applying and lifting of embargoes caused considerable difficulty in shipments. Carloads of pulpwood en route for the paper mill did not move for days, and consequently the mill only operated at intervals.

The majority of the men in the woods for the Hawkesbury Lumber Company came out before March 10, and it was expected that the remainder would follow shortly. Mr. R. L. Blackburn reported the car shortage had greatly handicapped shipments with the Hawkesbury Company. Some orders on the company's books six months ago still awaited shipment. Mr. Blackburn reported a shortage of 10-inch stock of practically all woods, and also said 8 x 2 was scarce.

The M. C. Neate Lumber Company asserted that the retail trade was quiet, with little activity showing in building lines. This company secured a shell box order for 35,000 two-round six-inch, which will keep the plant busy for six weeks or more.

J. Oliver & Son secured a contract for 60,000 two-round six-inch shell boxes. The mill labor situation was reported as satisfactory.

The Rideau Lumber Company reported very little business, chiefly due to shortage of cars and embargoes against many shipping points in Northern New York State. A shortage of stocks of the lower grade was also reported.

Estate of James Davidson completed its woods operations around March 15. About 150 men were affected. Mill labor is reported good. An order for a carload of moulding for Halifax was received. Mr. Grant Davidson said that it was expected the plant would complete

Cuts Milk Costs—Reduces the Waste

Klim is the solids—the body building food value—of fresh, pasteurized, separated milk, in powder form. It is packed in handy 10 pound tins. Bults small, saves 75 per cent. in freight charges. Ten pounds makes 40 quarts of liquid with the natural fresh milk taste. Klim keeps indefinitely. Can be used from the tin as needed. Will not freeze nor turn sour. It is cheaper than any other form of milk. Can be mixed dry with flour, sugar, coffee, etc., in cooking, or dissolved in water for use as liquid.

The Carriage You Are Looking For

Our No. 1 Size

CARRIAGE.—Has three head blocks, as shown in cut, usually set 9 and 6 feet apart, will be placed any distance apart to suit purchaser. Knees open 38 in. from saw, and is fitted with Knight or Peel dogs, as desired. Taper movement on each knee. 1 15-16 in. steel set bar with steel pinions and coil spring receder, and friction lever brake for stopping knees where required. Timbers are 5 x 6 in., or heavier if desired, well bolted and braced. Diameter of truck wheel, 12 in. Axles 1 3/4 in. diameter, and extend clear across carriage, are furnished with self-oiling bearings. Front block is fitted with timber rule, placed as desired; 54 feet of V and flat track furnished with each carriage.

SET WORKS.—As shown in cut, is made up of ratchet wheel 12 in. diameter, 4 in. face, with set lever carrying 7 steel pawls of varying lengths; also, same number of check pawls set in quadrant. Both sets of pawls are disengaged from either side of carriage when required to recede knees. This is a positive set, without lost motion.

FEED WORKS.—As shown in cut, consists of 16 x 12 in. drum, with spur gear keyed to shaft. Pinion or friction shaft in saw frame engages with this gear. Cable takes two or three turns around drum, and is passed around end sheaves and attached to carriage. We also furnish 26 in. drum with internal gear in place of 16 in. drum when desired.

the old 128,000 shell box contract before the end of March. This plant was not successful in its tender on the new shell box contracts. The sash and door trade continued slow.

Shepard & Morse Lumber Company say business is good and orders plentiful. The rail situation has shown some improvement since February. Enquiries are continuing satisfactory, and Mr. P. C. Walker is of the opinion that if cars are available that a good spring business will be done. The principal demand was for export to the United States.

Shipping Situation is Still Trying

Montreal, March 11.—(Special to the "Canada Lumberman.")—The transportation problem continues to be the dominant feature of the market. Enquiries and orders are fairly satisfactory, but, as the head of one firm remarked, "What is the use of booking orders when we cannot deliver the lumber?" On the top of the car shortage comes the embargoes in the United States. Even in instances where the orders are for the United States Government and licenses for shipment to embargoed points have been given, it is almost impossible to get a sufficient number of cars. Canadian shippers to domestic buyers are in the same boat as regards cars. The situation has resulted in firms being unable to fill their orders with anything like promptitude.

The question of prices for the new cut is again discussed. Manufacturers are, in many cases, still unwilling to talk firm prices, although naturally are prepared to do business on a basis which some wholesalers regard as out of the question. One firm has been looking over the ground east of Quebec and found practically no disposition on the part of manufacturers to sell cuts, preferring to wait events. In instances where quotations were named the figure was around \$35 per 1,000 feet, log run, culls out, for spruce. In these times of advancing prices, buyer and seller find it more difficult to get together, particularly as there seems to be an impression that prices will go still higher.

The paucity of the demand for local building may be judged from the following figures of the building permits: For February, \$77,045, a decrease of \$325,520; and for the two months of the present year \$190,155, a decline of \$462,305. The building season will, in all probability, be a poor one, as there are no outstanding projects in sight, and any building will be largely confined to work which cannot be postponed. The high cost is a deterrent to extensive building being undertaken. Stocks in the yards are reported to be low.

There is a better enquiry for hardwoods, especially those for piano and furniture factories. Veneers have also been in good demand, but stocks are not large, and the embargoes in the States have acted against free shipments to this side.

The pulp markets are a trifle firmer. Sulphite is selling more freely, while ground wood keeps steady. The car situation is affecting practically all the mills, and shipments are comparatively slow. The price of pulpwood continues high, other raw materials being on a firm basis.

Waiting for the Turn of the Tide

St. John, N.B., March 11.—(Special to "Canada Lumberman.")—Conditions in the timber trade in St. John are more quiet than they have been for some years, and are almost at a standstill. Little, if any, shipping is being done by water, and not much more by rail. Only those who have bona fide United States Government orders are able to get anything over the border. Matters do not seem to improve any, and the trade is now waiting for the turn of the tide. Inactivity characterizes the movement of stocks.

The general opinion is that prices will have to advance or millmen will have no profit on their 1918 sawing. This matter has been so thoroughly discussed in previous references to the subject that it needs no extended comment at this particular time. The local manufacturers have about come to the conclusion that they will have to saw their logs and pile their lumber, selling such stocks from time to time as will realize a profit. Those who can will hold the sawn material pile as long as yard room is available and then cease operations. Some enquiries from Liverpool have been coming to this side of late, and offers, f.o.b., have been made at \$35 per M. for the usual specifications, with ends fourth, and scantlings at about \$2 less, including a certain amount of boards. If boats were available there would certainly be a good movement of lumber, as the stocks at Liverpool and Manchester have never been so depleted. The only lumber that these cities have been able to get is that sawn in England and Scotland by the government. It is reported that some sales of Quebec two-inch have taken place during the last three weeks, log run, at \$35 per M. at the mill. It is rumored that some twenty million feet changed hands at this figure. Other mill cuts are under offer at or around this quotation. If the logger and mill man hold a good, stiff upper lip they should be able to get a purchaser for their product.

Bank logs on the River St. John and its tributaries are bringing unheard-of prices, anywhere around \$16 to \$17 being paid for logs, and

these all running five, six, seven, and eight inch at top, and for eleven-inch logs, which are very scarce, extreme prices are asked.

Local conditions have shown no improvement, and doubtless will not do so until the weather changes. Halifax is not buying much from St. John—in fact, very little restoration work has yet begun, and will not until a definite decision regarding what the government is going to do is given out.

Logging conditions do not show much improvement, and the heavy falls of snow have hindered the work of hauling during the past month. Rain came, but it was followed by snow again, and now it is a question whether the logging operator can get his logs to the streams before the break-up comes. Men are leaving, and those who are not leaving are being drafted for military purposes. The mills in St. John will start up in about four weeks, and are now preparing for the summer work. The usual repairs are being carried on and no extensive changes are being made.

Enough Hardwood to Last Fifty Years

H. T. Flynn, who is a well-known lumberman, and ex-Mayor of Maniwaki, Que., stated recently there was enough hardwood within a radius of twelve miles of Ottawa to take care of the needs of that city for the next fifty years. The wood could be tapped from every station on the Gatineau railway line, commencing from Wakefield, within five miles of the railway station, and could be laid on the rails at four dollars per cord at the most. He added that all over the Gatineau district within a few miles of the railway there were inexhaustible supplies owned by farmers who would be only too glad to have their timber cut and taken away for next to nothing as an aid in clearing the land. Some concerted action should be taken by the government or municipal authorities to obtain the wood and thus avert a fuel famine.

Interested in Large Lumber Concern

In his evidence before the Canadian Northern Railway Arbitration Board in Toronto lately, Sir Donald Mann placed the value of C.N.R. shares at 60 cents on the dollar. He said that the owners would take \$20,000,000 for the \$60,000,000 worth of stock. It appears that the federal government has limited the award of the arbitrators to a maximum of \$10,000,000. Continuing, Sir Donald said that both the Grand Trunk Railway and the Canadian Pacific Railway wanted to buy the C.N.R. Neither of these roads was friendly. Conferences were held at Ottawa with officials of the Grand Trunk Pacific, who also sought to take over the line, but nothing came out of the conferences. The British Columbia Government asked Mackenzie & Mann to extend their lines to the Pacific Coast. The witness added: "We were interested in one of the largest lumber mills in Canada, which paid \$4,000,000 in freight a year. That was the Fraser River Lumber Company, which has a cutting capacity of 800,000 feet a day."

Production of Lumber in France

A report on the operations of the Canadian Forestry Corps in France for the month of December, says: "the companies are all considerably under strength owing to the difficulty in getting reinforcements." Production, however, greatly increased in spite of the lack of reinforcements. The corps was engaged on the production of sawn lumber to be used in the construction of huts for the British, French and American armies.

The work of producing fuel wood for the men in the forward areas was also undertaken by the Forestry Corps and their operations added not a little to the comfort of the troops. This wood is taken to the fighting units by motor lorries.

During the month the good work of the officers and men of the Canadian Forestry Corps operating in the French army area was recognized by the bestowal upon five officers, one sergeant and two privates of the Croix de Guerre, for devotion to duty and bravery under fire. Two officers were awarded the D.S.O. by Sir Douglas Haig, while seven other officers, one n.c.o. and one man were mentioned in despatches.

Make a Bridge of Ships

"Make a bridge of ships" to France was the message from General Pershing and every man of his command, delivered to the American people recently by Major Frederick Palmer, Chief Censor on General Pershing's staff, in an address at the National Press Club, Washington.

"Build ships and let every woman and child in the land think ships," said he. "We ought to be wearing little metal ships in our button-holes. Children ought to play with toy ships. The woman who turns from knitting to encouraging a ship's riveter to do more rivets a day is serving her country."

"Toward our shipyards for the power they mean during and after the war the German General Staff strains its vision. Build, build and continue to build ships. Make a bridge of ships to Pershing."

Your Matcher is No Better Than Its Work

The **Yates** No. 91 Planer and Matcher

is known throughout the whole of North America for its work. Its fine finish at high speeds has been a source of pride and profit to hundreds of owners. Some of the largest mills in the country couldn't get along without their "Ninety-Ones." Couldn't "keep house" without them. Fast feed machinery capable of quality output is the only answer to the demand of present conditions. The "Ninety-One" is just such a machine.

Ask for a copy of our Matcher Book. It has been the stepping-stone to bigger profits for others. Why not YOU? Get in line TODAY. Let the fellows behind you do the sweating. The book is free. Your request is our obligation, not yours.

202 Board of Trade Building

MONTREAL

CANADA

Much Shipbuilding Carried On in Canada

The biggest year in shipbuilding in the history of the Dominion was in 1917. According to figures recently given out by the Imperial Munitions Board, at Ottawa, contracts have been awarded during the past twelve months for 47 wooden ships, with a tonnage of 128,000, representing an expenditure of \$24,500,000, and for 43 steel ships, totaling 211,300 tons, worth \$40,000,000, or a grand total of \$64,500,000.

In British Columbia contracts were let for 27 wooden ships, valued at \$14,100,000; in Ontario, 4 wooden ships, totalling 11,200 tons, worth \$2,000,000; in Quebec, 12 wooden ships, of 2,000 tons each, worth \$6,000,000; in New Brunswick, 2 wooden ships, of 2,800 tons each, worth \$1,000,000, and in Nova Scotia, 1 wooden ship, at \$500,000.

According to a report of the Imperial Munitions Board, it is reasonable to suppose that the approximate total tonnage for 1918 will be about 400,000. The approximate tonnage of wooden vessels being built by the Imperial Board on the two coasts, the Great Lakes, and the St. Lawrence River is about 146,000. Figures as to the exact number of men employed in this program are not available, but assuming an average labor cost per ton, it is stated it will not be far from the equivalent of 25,000 men continuously employed.

In view of the foregoing, the figures with respect to the tonnage constructed in Canada in past years are of interest. For instance, 190,756 tons were constructed in 1874, when wooden ship construction was at its height, and each year since then has shown less activity until the war years. In 1880 the average constructed was 65,441; in 1885, 41,179; in 1890, 52,378; in 1895, 16,270; in 1900, 22,326; in 1905, 19,781; in 1910, 22,283, and in 1914, 43,346.

Lumber Dues on B. C. Farm Lands

At the present session of the British Columbia Legislature it is expected that land legislation will be introduced to include a measure giving the government authority to go upon private properties bought from the crown as agricultural lands and to exact stumpage if it is found that timber on the lands is present in greater quantities than permitted in the Agricultural Land Act, which is about 8,000 feet per acre. The government takes the view that a good deal of land property within the timber classification has in the past been sold as agricultural land at two dollars and a half and five dollars per acre. It is likely that all these private holdings will be examined by departmental experts and if the timber existing on them is over the limit the usual stumpage dues charges will be levied.

Dropped Two Million Dollars in Timber Deal

Another of the ill-starred ventures of Alvo von Alvensleben came to an end recently, when Registrar A. B. Pottenger sold 21,117 acres of valuable timber lands on Vancouver Island to the Red Cliff Lumber Company, of Duluth, for \$524,726, to satisfy a judgment which that company held against Alvensleben for that amount. The Red Cliff Lumber Company was the vendor of the property to Alvensleben and his associates some years ago, and managed to obtain about two million dollars in payments on the deal. Before the war broke, Alvensleben made a hurried trip to Berlin and hurried back again, but did not risk crossing the border at Seattle. Further payments fell due, but were not met, and the Red Cliff Lumber Company obtained judgment for \$524,726, on which execution was sought. By buying under their own execution the Red Cliff Lumber Company now obtain repossession of the property.

Demand for Hemlock Bark Makes Fishing Better

The Highlands of Ontario and the Muskoka Lakes are rapidly resuming their former lead as the fishermen's paradise, according to a statement recently made by an official of the Department of Lands, Forests, and Mines for Ontario. It appears that, owing to the recent great demand for hemlock bark for tanning purposes brought about by the war, this bark is removed in the woods, with the result that the waters of the lakes are not tainted with the bitter bark, causing destruction of the fish. This circumstance, assisted by the frequent stocking of the waters with fry obtained from the government hatcheries, is rapidly filling up the lakes. It is said that there were a number of inland lakes which were "fished out" by the lumbermen and others, but since much of the valuable timber has been removed and the "squatters" gone, many districts are rapidly returning to nature, and the members of the finny tribe again abound.

During the latter half of 1917 Newfoundland exported about 30,000 tons of pulp and paper to the United States and a still larger volume of business is looked for next year. The bulk of this product had formerly been shipped to England, but owing to shortage of trans-Atlantic shipping a market was sought in the United States.

YOUR opportunity in Wood Pulp

Every Canadian Saw Mill or Plant could profitably take advantage of this opportunity. By installing an inexpensive Kraft Soda Mill, all the slabs, tops, bottoms and waste wood may be utilized to produce Wood Pulp. We can place long term contracts for all that Canadian concerns are able to supply. The Swedish supply is practically cut off and Canada has a free field for this business. We will be pleased to send you details of this opportunity.

Owens Half World's Available Timber

In 1913, that is, just before the war, the Russian timber industry imported machinery to the value of over two million roubles, some 90 per cent. of saws, knives, etc., used by woodworking concerns coming from abroad. According to the industrial census, only 956 sawmills and other woodworking establishments were working at the time of census, and particularly in five northern governments of Russia the existing concerns could satisfy but two-thirds of the demand on the home market. Therefore, the proposed development of the timber industry will most certainly create a new and enlarged market for every kind of woodworking machinery, the capacity of which will greatly exceed that of the pre-war market. Again, in this case, as in the case of home production of iron and steel, the metallurgical industry in Russia will be unable to cope successfully with the new demands. This is frankly recognized by those who are interested in the Russian timber trade. Russia possesses nearly one-half of the world's available timber, having two million square miles of territory under forest, with a great variety of hard and soft woods suitable for constructional work, wood-pulp and chemical treatment. Owing to the geographical position of the forests the dormant type is the coniferous. In the matter of numbers, the spruce is the most plentiful, but the pine forests are also very extensive. The Archangel and Onega deals are well known on the British market. Among other coniferous species abundant in Russia, fir and larch may be mentioned, but there are other valuable timbers in Siberia, which will be able to compete with the European sorts owing to the higher prices prevalent in the timber market, such as the stone pine, Ayan pine, etc. There are also many kinds of hardwood—oak, birch, beech, hornbeam, ash, maple, elm, etc. With this enormous variety and quantity of timber it is obvious that Russia will prove a vast market for the different classes of woodworking machinery.

Newsy Briefs From Pacific Coast

The Queen Charlotte Islands are contributing materially in good clear airplane spruce to the 29,000,000-foot contract let recently in B. C. by the representative of the British Government. Two hundred cars of selected spruce with an approximate cost of \$140 per thousand feet, will be hurried forward every month from local forests.

Recent heavy southwest gales broke a number of booms of logs in the Gulf of Georgia. The logs were scattered all over the gulf and the seas were

too rough for some time to permit of the logs being rounded up. It was estimated that the quantity adrift amounted to two million feet. Big masses of the timbers floated off the Ballenas Islands.

The Crowley Logging Company, Limited, has been incorporated, with head office at Vancouver, B.C., and capital stock of \$10,000, to purchase and otherwise acquire timber licenses, timber leases, and timber lands; to carry on the business of cutting and getting out saw logs and other forest products, and manufacturing same into lumber and finished products, also to carry on business as timber merchants, sawmill, shingle mill, pulp mill and paper mill owners, etc.

An arrangement has been sanctioned by the courts in British Columbia, whereby a sixteen thousand dollar burner is to be erected at the British Canadian Lumber Company's mill at Port Alberni by the lessee. The mill is leased on a rental of so much per thousand feet of lumber cut. Under the arrangement if the rental averages nineteen hundred dollars per month during the term of the lease the lessor is to allow the lessee six thousand dollars off the cost of the burner.

Victoria, B.C., has entered upon her second year as a shipbuilding port. The city has two big yards which are kept very busy. A recapitulation of the shipbuilding in British Columbia shows that wooden schooners built in that province move a vast quantity of the splendid lumber of the forests of the Coast to the markets of the world. The total lumber export of 1916, including all shipments sent outside of the province by sea, and rail to foreign points, and by rail to the prairies and east, was about 106,000,000 feet.

The British Columbia Mills, Timber & Trading Company, of Vancouver, B.C., which was founded in 1865, recently carried a splendidly illustrated advertisement in the Vancouver papers. A large view was presented of loading timbers on Hastings sawmill wharves, a large proportion of the timbers being from 65 to 110 feet long and from 12 x 12 inches to 24 x 24 inches square. The cargo was over 4,000,000 feet b.m., and as far as is known is the biggest cargo of any one vessel cut and shipped by any one mill on the Pacific Coast.

McDonnell & Burke, Limited, have been incorporated with head office at Fanny Bay, B.C., and capital stock of \$30,000, to purchase, acquire and take over from John W. McDonnell and Lyman H. Burke the mill property and business now owned by them at or near Fanny Bay, B.C., including a shingle mill and equipment. The new company will carry on business as timber merchants, sawmill, shingle mill and pulp mill owners, loggers, lumbermen, and will manufacture and deal in saw logs, timber, lumber, piles, poles, and wood of all kinds.

One Reason Why CONDOR BELT shows the greatest ultimate economy of any belt on the market today.

This giant press weighing 550,000 pounds is used for vulcanizing Condor Belts and is one step towards the perfection of this belt, which is universally adapted to severe power conditions.

Equipped with immense clamps on either end, which move by the operation of hydraulic pressure, it stretches the belt uniformly at all points, exerting a pull powerful enough to break an ordinary belt, yet in Condor it simply removes the stretch so that it will not elongate in use.

EDGINGS

Ontario

S. L. Lambert, of Welland, Ont., is in the market for a double cutting band sawmill.

It is reported that the York Lumber Company at Bigwood, Ont., will move to Bannerman's Siding, just north of Cartier, Ont.

According to the estimates for the coming year, as submitted to the Ontario Legislature, the expenditure for lands, forests and mines is put down at \$1,047,000.

Under the provisions of the Ontario Companies Act the corporate name of Marsh & Henthorn, Limited, Belleville, Ont., has been changed to Marsh Engineering Works, Limited.

Francis P. Brazil died recently in Toronto, after several months' illness. He was born in Bond Head, Ont., and for the past few years had been engaged in the retail lumber business.

Cherette & Cherette formerly of Chelmsford, Ont., recently erected a new double cut band mill at Caipha, Ont., on the C. N. O. They will cut logs for Clements and DeForest, of Sudbury, Ont.

The London & Petrolea Barrel Company, Simcoe Street, East London, Ont., are contemplating the erection of a dry kiln to cost \$5,000. The building will be one storey and of red brick construction.

Greig, Morris & Blair, Limited, have been incorporated with head office at Toronto, Ont., and a capital stock of \$50,000, to carry on business as manufacturers of and dealers in timber, lumber, logs and paper mills, etc. The provisional directors are A. Greig, A. R. Cochrane and G. N. Shaver.

According to advices received in Ottawa from the Department of Fisheries, Toronto, the Ontario Government proposes to kill six hundred beaver at Algonquin Park during the month of April to be used for food purposes. It is further reported that the carcasses will be placed in cold storage. Beaver flesh is said to taste something like young pork. Whale meat and beaver meat are now among the new war diets.

The Consolidated Lumber Company, Limited, has been incorporated with head office at Toronto, Ont., and capital stock of \$500,000, to carry on business as lumber and timber merchants, and to deal in logs, pulpwood, poles, ties, etc. The company will take over all the property and assets of the W. C. Charters Lumber Company, Limited, as a going concern. The provisional directors are A. J. R. Snow, C. B. Nasmith, F. E. Earl, and J. W. McFadden.

Hon. G. Howard Ferguson, Minister of Lands, Forests and Mines for Ontario, has announced that young men under military age and students, who have secured exemption in order to complete their courses, are the only applicants who will be able to secure appointments to the fire ranging staff of the province this summer. In view of the great demand for farm help the Department in selecting its rangers will keep before it constantly the necessity for leaving for farm work all men whose services can be of more use in agricultural pursuits than in ranging.

The Pine Lake Lumber Company, Limited, with offices at 201 Eastern Townships Building, Montreal, P.Q., have bought out the old Ontario Lumber Company at Pickerel, Ont., and will build a sawmill. The plans have already been prepared. The company have an Ontario charter and recently took out a license to do business in Quebec. An item in a recent edition of the "Canada Lumberman" referring to the fact that a company of the same name had dissolved was somewhat misleading. It appears that the name was assumed unjustifiably and steps were taken to dissolve the latter organization.

It is announced by Hon. G. Howard Ferguson, Minister of Lands, Forests and Mines, that another five million dollars will be sent in northern and north-western Ontario during the next few years. Of the appropriation of five million dollars that was made five years ago, only about half a million remain. Mr. Ferguson explains that with the reconstructive period which will come after the war, and with the plans which are to be carried out in the development of the northland, it has been thought advisable to take time by the forelock and be ready for the hinterland expansion and settlement.

Eastern Canada

W. K. Smith is preparing to lay the keel of a three-masted schooner at Plymouth, N.S.

Capt. Kenneth Iverson, Lunenburg, N.S., is planning for the construction of a large tern schooner at Chester Basin, N.S.

The sawmill belonging to R. M. Baxter, River Philip, N.S., was recently completely destroyed by fire. No insurance was carried.

The Piercey Supply Company, Limited, Davidson Street, Halifax, N.S., will equip their woodworking plant with 1 heavy band resaw, carrying 8-inch blade; 1 large fast-feed planer and matcher; 1 large double surface planer; and later the company will equip the plant with a complete woodworking outfit;

also their hardwood flooring plant will be equipped with a dry kiln, shaving exhaust system, etc.

Mr. Harry Warner, M.P.P., Digby, N.S., proposes going into the shipbuilding business. He already has the keels laid at Plympton Shipyard for two schooners.

Price Bros. & Company, Limited, Quebec, P.Q., state that it is not their intention at the present time to add to their present mills, or to construct a new mill, either at Batiscan or elsewhere.

The Mullen Pulp Company are constructing at Gaspé Bay, P.Q., a pulp mill with a capacity of 100 tons of ground wood. It is expected that the plant will be operating during the coming summer.

The Laurentide Company, Limited, McGibbon and Third Avenue, Grand-Mère, P.Q., are contemplating an extension to their plant to cost approximately \$150,000, as soon as the weather is permissible.

The Westport Shipbuilding Company has been formed by Capt. Fred Barkhouse, and the company has started a shipyard at White's Cove, Digby Neck, N.S., and will shortly have keel started for a large three-masted schooner.

The city council of Quebec is taking steps to induce the Federal Government to continue its shipbuilding programme in that city for the duration of the war, at least. Six wooden ships are now being built in Quebec City, giving employment to a large number of men.

Shipbuilding is being revived in Cardigan Ridge, P.E.I., where a three hundred ton, three-masted schooner is being built at a cost of forty thousand dollars by J. A. McDonald, of Cardigan, G. A. Thompson, of Montague, and Charles Lyons, of Charlottetown. Mr. McDonald has purchased the plant of the Annandale Lumber Company, which he is removing to Cardigan, where the lumber for the ship's frame will be sawn.

The International Shipbuilding Company have started at their plant in Nordin, N.B., the building of a four-masted schooner. The length will be 168 feet, beam 37 feet, and gross tonnage 575 tons. The vessel, which will be the largest on the Miramichi River, in the last fifty years, will be fitted for auxiliary oil engines. It will be a splendid boat, well built, of native woods and Douglas fir. Her bowsprit is a single stick 62 feet long and 24 inches square. The stem and stern posts are 14 x 16 inch southern oak.

The Riordon Pulp and Paper Company, Limited, Montreal, had an exceptionally good year. The profits totalled \$1,943,651, an increase of \$417,036. After providing for charges, including an allowance of \$766,055 for provision for exhaustion of timber limits, depreciation of plant, etc., the net profit is \$1,032,942, compared with \$1,235,736, the decrease being due to the heavier charges for timber limits, depreciation, etc. The preferred and common dividends absorb \$520,000, leaving a balance of \$512,942. The surplus now stands at \$1,851,812. The inventories have risen by over \$600,000 to \$1,940,204, and the total assets amount to \$10,434,071 compared with \$9,932,131 in the preceding statement.

Western Canada

The Dempsey Logging Company, Limited, has been incorporated, with head office at Vancouver, B.C., and capital stock of \$50,000, to carry on business as sawmill and planing mill operators, and as manufacturers of and dealers in timber, lumber, sash, doors, etc.

A new vessel, the Jean Steadman, which was built at Victoria, recently started on her maiden trip. She is owned by the Canada West Coast Navigation Company and her first cargo was 1,567,000 feet of lumber from the Fraser River Mills, New Westminster, bound for Melbourne, Australia.

J. A. Keating, of Seattle, Wash., who is President of the Lumbermen's Trust Company, as well as a large financial corporation, recently paid a visit to Vancouver and stated that Americans had such faith in the future of Canada and in the result of the war that there was a keen demand for Canadian war bonds down south.

There will be no further sales of timber limits in British Columbia until August 1st next. Shortly after that date there will be a large sale. This will be due to the fact that five years ago all holders of limits were given the option of renewing their leases until 1933, the leases to run for twenty years. Many did take advantage of the opportunity but others did not. The leases not sold then will be put up in August.

A recent despatch from Victoria, B.C., says: If Mr. W. R. Ross, Conservative lieutenant and member for Fort George has his way, Bill No. 4, which is the proposed measure before the legislative assembly providing for the cutting of aeroplane spruce, will be changed in its wording so that the extensive powers therein contained will be relegated to the Lieutenant-Governor-in-Council, instead of being left solely in the hands of Hon. T. D. Pattullo, Minister of Lands. When the bill came up for debate Mr. Ross expressed himself heartily in accord with the principle of the measure, which is of the Win-the-War variety, but thought that the right to invade private holdings on the part of the Minister of Lands, remove spruce for allied aeroplanes and create a price for the material secured, is altogether too much power in the hands of the Minister. The present wording also allows the Minister to depute whom he will to do likewise, and this was characterized as dangerous legislation. Mr. Ross said there was no telling what would result if the Minister deputed one timber concern or logger to invade the holdings of another, remove timber therefrom and create a price for that taken.

ADJUSTABLE SAFETY CAR-STAKE EQUIPMENT

(SCHMITZ PATENT)

Mr. Logger, Attention !

We have the ONLY device that removes ALL danger and difficulty in moving your logs from camp to mill on cars, trucks or sleighs.

No balks, breakdowns or dislocation of parts—IT WORKS ALWAYS. Though still new, it is thoroughly tried and tested, and gives perfect satisfaction to all who use it. Nothing like it for speeding up production and reducing expenses.

It will save you TEN times its cost in wages, renewal of stakes, avoidance of accidents, and vexatious delays.

If you don't use stakes on your cars, you CAN use them with this equipment; you need it on your cars right now, and you will WANT it as soon as you find out what it will do for you.

Send for illustrated Circular, with testimonials, and let us convince you of the truth of these claims. Address

One of the most difficult and costly operations in sawmaking is the grinding of blades to taper. Disston Cross-cut Saws are ground uniform in thickness along the entire tooth-edge, gradually tapering thinner to the back. This prevents kerf binding. There is no sacrifice of weight, stiffness or elasticity by the Disston Method of Grinding.

This is one of the reasons why Disston Saws run easiest, cut fastest and last longest.

*You Can Make No
Unsafe Purchase
on the Advice of
LACEY & CO.*

*Why? Because we will
give you our final advice only on
known facts.*

*If we sell it to you, you
can bank on value as represented
—because when we don't know
we find out.*

*If you buy it on our ad-
vice, it will only be after we
know. We shall know because
we shall not give our final advice until
we have made for you, at your reasonable
cost, a **LACEY REPORT** of such
nature as we find the case calls for, a
"2 run," a "4 run," or a tree count. Then
both you and we will know what is there,
and talk of price will then be in order.*

"HAMILTON" DRAG-SAWS

For cutting up that hardwood bush install one of our heavy, well-built Drag-Saws

These machines will do the work required without trouble or expense. The frames are of heavy timber fastened together with long bolts. The shear, pitman and standard are of the very best hardwood, and the saw is fastened to the shear by one key—making a very simple, quick and strong device.

We make these machines in two sizes, as follows:

Class "A," as shown in cut, is driven with direct belt and tightener, tight and loose pulley may be used; carries a single 6 ft. by 12 in. saw, No. 8 ga.; shipping weight 1700 lbs.

Class "B" is driven with direct belt with spur friction on crankshaft. Carries a single 6 ft. x 12 in. saw, No. 8 ga., shipping weight 2200 lbs.

A 10 H.P. engine will easily drive either machine.

We are prepared to give prompt delivery on these machines and will be pleased to quote prices and delivery on request.

**Begin now to get ready for next winter's need for
hardwood throughout the country**

Economical Log Loading

With prices of everything on the increase, Loading Machinery naturally costs more than it did five years ago, but nevertheless, we are studying the customer's interest to assist him to handle his logs with the greatest speed and at the lowest cost.

For instance, the machine illustrated herewith is a sample of a type of Loading Engine designed by us for use on a Loading Car supported over the track. One drum of this machine loads the logs on the car next in front of it. The other drum pulls the train along till the next car is in position for loading. It takes much more power to move the train than to load the logs. Consequently, we put a compound gearing on the car-pulling drum, thereby developing sufficient power from a machine of just the right size to handle the logs. This smaller machine costs much less than the high power machine usually used for this purpose, but will do the work effectively.

Let us figure on your needs in Logging Machinery.

MARSH ENGINEERING WORKS LIMITED, - Belleville, Ont.
(Formerly Marsh & Henthorn, Limited, Note New Name)

Transmit 100% of Your Power

Why pay good money to generate power and then employ a poor belt that will only transmit a fraction of that power.

If you equip your mill with Goodhue Belts you can transmit 100% of the power generated. Goodhue Belts stretch 15% to 25% less than other belts and have just the right amount of "cling" on the pulley.

Write us for particulars and prices

YOU CAN DO IT WITH A— GOODHUE BELT

Vancouver Agents: Fleck Bros., Limited, 1142 Homer St., Vancouver, B.C.

"Little David" Wood Borer

This tool is made in three sizes covering a range of holes from one to four inches in diameter, and is light, speedy and powerful. This tool is also furnished mounted on a pedestal for general purposes. See Bulletin 404I.

Bulletin 8507 tells more about it.

We supply the complete equipment for applying compressed air to construction work, including Air Compressors, Air Hose, Pneumatic Tools, Hoists, Motors, etc. Any of our branch offices will be pleased to submit estimates and specify the equipment best suited to your work.

"Little David" Grinder

This grinder is light and convenient. A 21 inch extension spindle is furnished for some classes of work and adds greatly to the usefulness of the tool.

Complete set of pneumatic tool bulletins furnished on request

This Blower— **DOUBLES**

The Capacity of a Boiler

The Coppus Turbo Blower is compact, simple and thoroughly efficient in use with boilers where moist refuse is burned, and proves highly satisfactory under the grates of Dutch Ovens. Increase the efficiency of your boilers. Send us the plan of boiler house, particulars of boiler sizes, steam pressure desired and nature of fuel, and we will submit a proposition for your consideration.

Do You Know The Most Reliable Feed Water Heater?

IT IS

The Reilly Multicoil

Most compact on the market. Fifty years' faithful service, both on sea and land, has proved the reliability of the Reilly. It is undoubtedly the heater for you—Easily accessible—Non-Scaling and readily repaired in an emergency. Bulletins sent on request and prices on receipt of details of requirements.

We also furnish ASHTON GAUGES, MASON REDUCING VALVES and a general line of highest class Power Plant equipment.

This is a snap shot of the Adams Pointer

"Game for Anything"

Adams Pointers

Adams Pointers will tackle the heaviest work and surprise you with their powers.

These sturdy little crafts with their well built easy running engines are in use all over the Dominion.

Our catalogue and blue prints will explain the various advantages which Adams Pointers have over alligators and tugs. Lumbermen are quick to see that it is cheaper to work with an Adams Pointer.

*The Babbitt Metal that's at the Front in Efficiency
and Economy*

HARRIS HEAVY PRESSURE

THE ARISTOCRAT OF BABBITT METALS**SHIVES LUMBER CO., LTD., Campbellton, N.B.,
Canada**Messrs. The Canada Metal Co., Ltd.,
Toronto.

Dear Sirs:

Replying to your inquiry regarding our experience with Harris Heavy Pressure Metal, would say we have been using this metal for about five years in main bearings and cranks of Wickes' gangs and steam engines, also edgers, etc., in place of more expensive metals that we formerly used for these bearings.

We are pleased to be able to say that the Harris Heavy Pressure has in every case given us good satisfaction, being a nice metal to pour without shrinking or cracking, and wearing well.

So long as this metal retains its present standard of excellence we will have no hesitation in using it for the most severe conditions we have for babbitt metal.

Yours
JOHN M. MACLEAN,
Superintendent.**WRITE FOR COMPLETE LIST OF BABBITT METALS****THE CANADA METAL COMPANY, Limited****Head Office and Factory TORONTO Fraser Avenue****Branch Factories—****HAMILTON****MONTREAL****WINNIPEG****VANCOUVER**

Conserve Power

Today every item must be carefully considered which will increase the production of food, equipment, and ammunition. With this greater demand for production and the consequent heavier load on power equipment, the superiority of Graton & Knight Belts becomes more emphatic.

Whether you measure by length of service or maintained efficiency, Graton & Knight Standardized Leather Belts reduce your horse-power cost per year, increase production, and reduce machine interruptions.

Transmission of power is a more important item today than ever before and now is the time for you to get at the real facts concerning it.

Write for information on Standardization as applied to Leather Belting.

Buy FIRE BRICK

On a Quality Basis

Use as much care in its selection as you would in choosing the lumber that goes into your products.

No brick gives the best results for every purpose. The brick you would use for your refuse burner may not give you the best results for your Dutch Oven.

We Manufacture the Following Well Known Brands

**"Elkco Special," "Elk Steel,"
"St. Marys," "Keystone" and "Rotex"**

When sending us your inquiries, specify for what purpose you need the brick.

We Make a Specialty of
**REFUSE BURNERS, BOILER SET-
TINGS, KILNS, DUTCH OVENS, ETC.**

Catalog sent upon request.

LOGGING LOCOMOTIVES

Locomotives on trunk line railroads have the advantage of the best facilities for inspection and repairs.

Logging locomotives face different conditions. They must work day after day in the hardest service, and often in localities where repairs cannot be made without great inconvenience. That is why we build our logging locomotives from interchangeable stock parts. With this

system every part must fit every other locomotive of the same size and design, and long delays waiting for duplicate parts are avoided. Interchangeable parts kept on hand at our Works for prompt shipment

MONTREAL LOCOMOTIVE WORKS, LIMITED,

No. 40 Heavy Duty Steel Saw Carriage

Long's "Quality" Carriages were the first saw mill machines built by the company. They were the machines that earned the reputation for dependability in service, that has placed "Long" Machinery in its present enviable position, at the head of its class. There is a "Long" carriage, in a weight, and at a price, to suit every purchaser. Catalogue on application.

The carriage illustrated is our heavy duty 3 block No. 40, the knees of which recede 40" from saw line. The carriage can be furnished in any number of head blocks or axles.

**We have the following on hand
ready for shipment**

one Portable Saw Mill outfit with Right hand Saw Frame and Carriage—set of track timbers, also the following items:

No. 1 Log Jack with foot wheel and idlers.

No. 7 Log Jack with foot wheel and idlers.

10 inch by 36 ft. Steam Feed.

10 inch by 42 ft. Steam Feed—Either feed can be furnished with vertical or horizontal valves.

Double acting set works in No. 1, 2 and 3 sizes.

We have one second hand plain slide valve engine, right hand, side crank, 9 x 13, suitable for a small saw mill plant.

Write at once for information regarding the above
or any other machinery you may need

"FROST KING" METAL

Our thirty-five years experience in metal mixing enables us to place on the market a babbitt that we believe to be absolutely perfect. For high speed machinery and engine work it is without an equal. It is specially designed for saw-mills, planing mills, threshing engines, traction engines, pumps, rolling mills, pulp machinery, and all classes of stationary engines. It is a high grade metal made of the very best selected stock, and carefully compounded.

If your dealer does not stock FROST KING send us a money order for your requirements. Price 30c per lb., Fort William and East; West of Fort William 35c per lb., delivered nearest railway station; packed in 30 lb. and 60 lb. boxes.

For extra duty, such as over-hanging saws, our TROJAN BABBITT will stand where all other metals will fail. Price, Fort William and East, 70c per lb.; West of Fort William, 75c, delivered to your nearest railway station; packed in 30 lb. and 60 lb. boxes.

"HAMILTON" CIRCULAR RE-SAWS

Here is a strong, rigid well designed machine, specially gotten up for resawing slabs. The feed rolls are carried on a sliding frame that is easily adjustable to cut lumber any desired thickness. The binding or press roll is 13 in. diam., fitted with saw discs and power driven. The saw used is 42 in. diam., driving pulley 18 in. diam. x 12 in. face. Cut shows Left Hand Machine.

We also make this machine with wooden frame, having the mandrel and saw carried on an adjustable sliding frame.

Descriptive circular sent upon request.

"HAMILTON" HUSK FRAMES

Made in different sizes to suit all requirements. Frames are all of cast iron, of heavy section throughout, planed on top and bottom, with mandrel boxes lined with high grade babbitt. Mandrels are exceptionally large, of forged steel with forged collar, and the guide is the famous Parkhurst steel saw guide with steel splitter.

We manufacture a complete line of up-to-date Sawmill Machinery for either Band or Circular Mills.
